INDEX OF SHEETS

SHEET NO.	DESCRIPTION
1	COVER SHEET
2	INDEX OF SHEETS & LIST OF STANDARDS
3	GENERAL NOTES
4 to 9	SUMMARY OF QUANTITIES
10	TYPICAL ROADWAY CROSS SECTION - FAI 57
11	CONTROL TIES
12	PLAN AND PROFILE - S.N. 010-0009 (NB)
13 to 14	H.M.A. RUNDOWN TRANSITION DETAILS - S.N. 010-0009 (NB)
15 to 32	STRUCTURE REPAIR DETAILS - S.N. 010-0009 (NB)
33	TEMPORARY CONCRETE BARRIER LAYOUT - S.N. 010-0009 (NB)
34	PLAN AND PROFILE - S.N. 010-0010 (SB)
35	H.M.A. RUNDOWN TRANSITION DETAILS - S.N. 010-0010 (SB)
36 to 64	STRUCTURE REHABILITATION DETAILS - S.N. 010-0010 (SB)
65	TEMPORARY CONCRETE BARRIER LAYOUT - S.N. 010-0010 (SB)
66 to 68	WIDTH RESTRICTION AND MAXIMUM WIDTH SIGNING
69 to 77	AS-BUILT PLANS 1964
78 to 87	AS-BUILT PLANS 1987
88	PAVEMENT MARKING (INTERSTATE & MULTI-LANE APPLICATION)

LIST OF HIGHWAY STANDARDS

STANDARD NO.	DESCRIPTION
000001-06	STANDARD SYMBOLS, ABBREVIATIONS AND PATTERNS
001001-02	AREAS OF REINFORCEMENT BARS
001006	DECIMAL OF AN INCH AND OF A FOOT
420401-11	BRIDGE APPROACH PAVEMENT CONNECTOR
515001-03	NAME PLATE FOR BRIDGES
630001-10	STEEL PLATE BEAM GUARDRAIL
631031-13	TRAFFIC BARRIER TERMINAL, TYPE 6
635011-02	REFLECTOR MARKER AND MOUNTING DETAILS
667101-02	PERMANENT SURVEY MARKERS
701001-02	OFF-ROAD OPERATIONS, 2L, 2W, MORE THAN 15' AWAY
701006-05	OFF-ROAD OPERATIONS, 2L, 2W, 15' TO 24" FROM PAVEMENT EDGE
701101-04	OFF-ROAD OPERATIONS, MULTILANE, 15' TO 24" FROM PAVEMENT EDGE
701106-02	OFF-ROAD OPERATIONS, MULTILANE, MORE THAN 15' AWAY
701201-04	LANE CLOSURE, 2L, 2W, DAY ONLY, FOR SPEEDS >= 45 MPH
701301-04	LANE CLOSURE, 2L, 2W, SHORT TIME OPERATIONS
701400-08	APPROACH TO LANE CLOSURE, FREEWAY/EXPRESSWAY
701406-09	LANE CLOSURE, FREEWAY/EXPRESSWAY, DAY OPERATIONS ONLY
701402-10	LANE CLOSURE, FREEWAY/EXPRESSWAY WITH BARRIER
701411-09	LANE CLOSURE, MULTILANE AT ENTRANCE OR EXIT RAMPS
701426-07	LANE CLOSURE, MULTILANE, INTERMITTENT OR MOVING OPERATIONS
701901-04	TRAFFIC CONTROL DEVICES
704001-07	TEMPORARY CONCRETE BARRIER
780001-05	TYPICAL PAVEMENT MARKINGS
781001-03	TYPICAL APPLICATIONS RAISED REFLECTIVE PAVEMENT MARKERS

GENERAL NOTES

G.N.-100
ENGLISH UNITS OF MEASUREMENT SHALL GOVERN OVER AND SUPERSEDE ANY METRIC UNITS SHOWN IN THIS CONTRACT. WHERE INCLUDED, METRIC UNITS ARE FOR INFORMATION ONLY.

G.N.-100A
ELECTRONIC FILES AND/OR ELECTRONIC SURVEY INFORMATION INCLUDING CADD FILES WILL NOT BE AVAILABLE TO THE CONTRACTOR.

G.N.-105.09A
ALL ELEVATIONS SHOWN IN THE PLANS ARE BASED ON NORTH AMERICAN VERTICAL DATUM OF 1988. (NAVD 88)

G.N.-107.12 (SPECIAL)
THE NAME, ADDRESS AND TELEPHONE NUMBER OF THE LOCAL RAILROAD CONTACT IS:

Mr. Paul Chojenski
Manager, Public Projects CN
17641 South Ashland Avenue
Homewood, IL 60430
(708) 332-3557

SPECIAL ATTENTION IS CALLED TO ARTICLE 107.12 REGARDING RAILROAD FLAGGERS. THE NAME, ADDRESS AND TELEPHONE NUMBER OF THE RAILROAD FLAGGER CONTACT IS:

Ms. MaryEllen Carmody
700 Pershing Road
Pontiac, MI 48340
(248) 452-4705

SOME RAILROADS REQUIRE CONTRACTORS TO OBTAIN A RIGHT OF ENTRY PERMIT BEFORE ENTERING UPON THE RAILROAD RIGHT OF WAY. IT IS THE RESPONSIBILITY OF THE CONTRACTOR TO OBTAIN A RAILROAD RIGHT OF ENTRY PERMIT FROM THE RAILROAD IF REQUIRED BY THE RAILROAD(S).

G.N.-406
THE QUANTITIES INCLUDED IN THE PLANS FOR HOT-MIX ASPHALT RESURFACING ARE INTENDED TO GIVE THE COVERAGE SHOWN ON THE TYPICAL CROSS SECTIONS. IT IS NOT INTENDED TO INCREASE THE THICKNESS OF THE HOT-MIX ASPHALT MIXTURE IN ORDER TO USE ALL OF THE QUANTITIES INCLUDED IN THE CONTRACT.

G.N.-501
THE REMOVAL AND DISPOSAL OF THE EXISTING APPROACH SLABS AND PAVED SHOULDERS ARE INCLUDED WITH "REMOVE EXISTING CONCRETE DECK".

G.N.-406H

MIXTURE REQUIREMENTS

THE FOLLOWING MIXTURE REQUIREMENTS ARE APPLICABLE FOR THIS PROJECT:

Location	FAI 57	FAI 57	FAI 57
Mixture Use	Polymer Surface	Flexible Connector	Shoulder
AC/PG	SBS PG 70-22	PG 64-22	PG 64-22
Design Air Voids	4.0% @ Ndes=90	4.0% @ Ndes=90	4.0% @ Ndes=30
Mix Comp (Gradation)	IL 9.5	IL 19.0	IL 9.5L
Friction Aggregate	Mix D	N.A.	Mix C
Mixture Weight	112	112	112
Quality Management Program	QC/QA	QC/QA	QC/QA
Sublot Size	N.A.	N.A.	N.A.

G.N.-482
ALL MATERIAL PLACED AS HOT-MIX ASPHALT SHOULDERS SHALL BE COMPACTED TO 94.0 - 98.4 PERCENT OF THE MAXIMUM THEORETICAL DENSITY. THIS REQUIREMENT SHALL APPLY TO IL 9.5L GRADATION SHOULDER MIXES AND OTHER MIXES (BOTTOM LIFT OF SHOULDERS). THIS MAXIMUM DENSITY SHALL BE DETERMINED FROM THE MOVING AVERAGE OF FOUR TESTS AS IN OTHER QC/QA TESTING. A NUCLEAR GAUGE DENSITY/CORE CORRELATION SHALL BE PERFORMED FOR THE IL 9.5L MIXES AND OTHER MIXES USING STANDARD CORRELATION PROCEDURES

G.N.-631
IF THE CONTRACTOR ELECTS TO USE THE ALTERNATE MOUNTING METHOD OF THRU DRILLING THE MOUNTING HOLES FOR THE TRAFFIC BARRIER TERMINALS, TYPE 6, THE HOLES SHALL BE DRILLED USING A CORE DRILL. A HAMMER DRILL WILL NOT BE ALLOWED.

G.N.-781
RAISED REFLECTIVE PAVEMENT MARKERS SHALL BE PLACED IN ACCORDANCE WITH STANDARD 781001, AND THE DETAILS SHOWN IN THE PLANS. IF THERE IS ANY DISCREPANCY BETWEEN THE STANDARD AND THE DETAILS IN THE PLANS, THE DETAILS IN THE PLANS SHALL GOVERN. THE FINAL PAVEMENT MARKINGS SHALL BE IN PLACE PRIOR TO PLACING THE RAISED REFLECTIVE PAVEMENT MARKERS AND THE RAISED REFLECTIVE PAVEMENT MARKERS SHALL BE PLACED MIDWAY IN THE 30 FOOT (9 m) SPACE BETWEEN THE DASHED CENTERLINE STRIPES (WHEN APPLICABLE).

G.N.-Z0038
AN ALUMINUM TABLET OF THE TYPE SHOWN ON STANDARD 667101 SHALL BE PLACED ON THE PROPOSED STRUCTURE AS DIRECTED BY THE ENGINEER. THE BENCH MARK ELEVATION WILL BE ESTABLISHED AND MARKED BY THE DEPARTMENT. THIS WORK WILL BE PAID FOR AT THE CONTRACT UNIT PRICE EACH FOR PERMANENT BENCH MARKS.

Existing structure numbers 010-0009 (NB) and 010-0010 (SB) were built in 1964 as FAI 57, Section 10-33HVB, Contract 23378 at Station 456+43.07 in Champaign Co. The structures carry FAI 57 over IL 10 and ICRR. In 1977 the structures had waterproofing membrane system installed, H.M.A. wearing surface placed, expansion joints reconstructed, and deck patching accomplished as Section District 5 Bridge Deck Waterproofing 1977-1, Contract 32309. In 1988 the structures were rehabilitated as Section 10-33HVB-1&(10-33HB-2)I, Contract 42378. The structures had expansion joints reconstructed, parapet reconstructed, deck drains replaced, bearings repositioned, and slopewall repaired. The deck on SN 010-0009 was replaced with this contract. In 2003, SN 010-0010 received a new H.M.A. wearing surface with Section 10((31,32)RS-1;33RS-4), Contract 70009. In 2006, the preformed joints at the abutments were replaced with polymer concrete and silicone joints, and the preformed joint at the pier was replaced with a silicone joint by the District 5 Bridge Crew. In 2007, the District 5 Bridge Crew performed partial depth patching on the deck of SN 010-0010. In 2010, 2011, 2012, 2013 & 2014 various joint and patching repairs were completed by the District 5 Bridge Crew.

The structures consist of six span cast-in-place concrete deck on steel beams supported by solid hammerhead piers and pile bent abutments. The back to back abutment is 303'-2" and the out to out width is 36'-10" for each structure.

SPRINGFIELD ILLINOIS
STATE OF ILLINOIS

D. Carl Puzey 12/1/15
Expires 11/30/16

PROPOSED WORK

1. Perform Bridge Deck Scarification.
2. Perform Full-Depth Patching, Removal of Deck Ends, Parapets, and Hatch Blocks.
3. Removal of Existing Joints.
4. Removal of HMA on Exisiting Approach Pavements.
5. Replace End Diaphragms and Repair Beam Ends.
6. Replace Existing Bearings with Elastomeric Bearings at Abutments and Pier 3.
7. Place Reinforcement Bars, Locking Edge Rail and Shear Studs.
8. Cast Deck Ends, Parapet Ends and Hatch Blocks.
9. Install Preformed Joint Strip Seal into Locking Edge Rails.
10. Place Latex Concrete Overlay on Bridge Deck.
11. Repair Substructure Units.
12. Complete Milling Transitions and HMA Overlay at Approach Ends.

GENERAL NOTES

The deck ends and hatch blocks shall have its final surface tined according to Article 420.09 (e)(1) of the Standard Specifications. Cost to be included with concrete superstructure.

Plan dimensions and details relative to the existing structure have been taken from existing plans and are subject to nominal construction variations. It shall be the Contractor's responsibility to verify such dimensions and details in the field and make the necessary approved adjustments prior to construction or ordering of materials. Such variations shall not be cause for additional compensation for a change in the scope of work. However, the Contractor will be paid for the quantity actually furnished at the unit price for the work.

The existing structural steel coating contains lead. The Contractor shall take appropriate precautions to deal with the presence of lead on this project.

Reinforcement bars designated (E) shall be epoxy coated.

Prior to pouring the new concrete deck, all heavy or loose rust, loose mill scale, and other loose or potentially detrimental foreign material shall be removed from the surface in contact with concrete. Tightly adhered paint may remain unless otherwise noted. Removal shall be accomplished by methods that will not damage the steel and the cost will be included in the pay item covering removal of the existing concrete.

Existing structural steel that will be in contact with new structural steel shall be cleaned and painted prior to erection as required by the Special Provision "Cleaning and Painting Contact Surface Areas of Existing Steel Structures".

Existing reinforcement bars extending into the removal area shall be cleaned, straightened and incorporated into the new construction. Any reinforcement bars that are damaged during concrete removal shall be replaced with an approved bar splicer or anchorage system. Cost included with Concrete Removal.

Joint openings shall be adjusted according to article 520.04 of the Std. Specs. when the deck is poured at an ambient temperature other than 50°F.

BEAM REACTIONS

RP	(K)	18.5
RL	(K)	32.0
Imp.	(K)	9.3
R (Total)	(K)	59.8

Notes:
Diaphragm removal and reinstallation may be required to facilitate drilling holes. Cost included with Furnishing and Erecting Structural Steel.
New steel extensions, shim plates and connection bolts are included with Furnishing and Erecting Structural Steel.
Prior to ordering any material, the Contractor shall verify in the field all bearing height and shim thickness dimensions.
Min. jack capacity = 30 Tons.
Anchor bolts shall be ASTM F1554 all-thread (or an Engineer-approved alternate material) of the grade(s) and diameter(s) specified. ASTM A307 Grade C anchor bolts may be used in lieu of ASTM F1554 Grade 36 (Fy=36ksi). The corresponding specified grade of AASHTO M314 anchor bolts may be used in lieu of ASTM F1554.
Anchor bolts for Type II bearings shall be placed in holes drilled through the bottom bearing plate after members are in place. Side retainers shall be placed after bolts are installed.
Drilled and set anchor bolts shall be installed according to Article 521.06 of the Standard Specifications.
Side retainers shall be included in the cost of Elastomeric Bearing Assembly, Type II.
The ⅛" PTFE sheet shall be bonded directly to the top steel plate with a two-component, medium viscosity epoxy resin, conforming to the requirements of the Federal Specification MMM-A-134, Type I. The bond agent shall be applied on the full area of the contact surfaces.
Bonding of ⅛" PTFE sheet during vulcanizing process will be permitted provided the process and method of adjusting assembly height is approved by the Engineer.

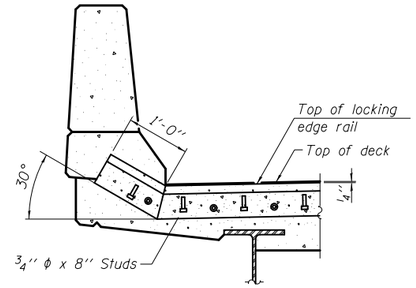
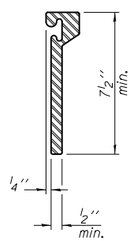
SECTION AT PROPOSED JOINT

(At North and South Abutments)

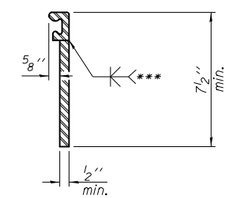


SECTION AT PROPOSED JOINT

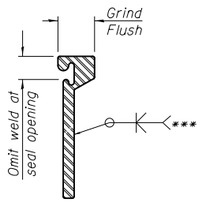
(At Pier #3)



ROLLED EXTRUDED RAIL



WELDED RAIL



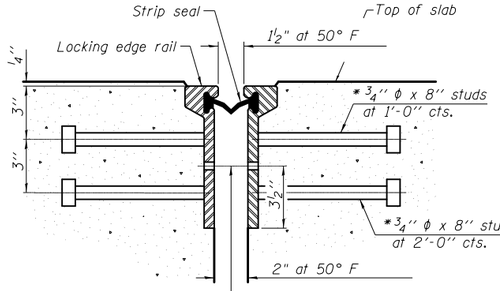
*** Back gouge not required if complete joint penetration is verified by mock-up.

LOCKING EDGE RAIL SPLICE

LOCKING EDGE RAILS

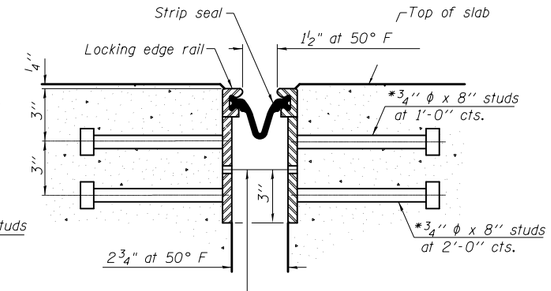
The inside of the locking edge rail groove shall be free of weld residue.

Rolled rail shown, welded rail similar.



7/16" ϕ holes at 4'-0" cts. for 3/8" ϕ bolts. All bolts shall be burned, sawed, or chipped off flush with the plates after forms are removed, typ.

SECTION THRU ROLLED RAIL JOINT



7/16" ϕ holes at 4'-0" cts. for 3/8" ϕ bolts. All bolts shall be burned, sawed, or chipped off flush with the plates after forms are removed, typ.

SECTION THRU WELDED RAIL JOINT

* Granular or solid flux filled headed studs conforming to Article 1006.32 of the Std. Specs., automatically end welded.

Notes:

The strip seal shall be made continuous and shall have a minimum thickness of 1/4". The configuration of the strip seal shall match the configuration of the Locking Edge Rails. Open or "webbed" strip seal gland configurations are not permitted. The gland shall be sized for a maximum rated movement of 4 inches.

The Locking Edge Rails depicted are conceptual only, except for the minimum dimensions shown. The actual configuration of the Locking Edge Rails and matching strip seal may vary from manufacturer to manufacturer. Flanged edge rails will not be allowed. Locking Edge Rails may be spliced at slope discontinuities.

The manufacturer's recommended installation methods shall be followed.

The joint opening and deck dimensions detailed on the superstructure are based on a rolled rail expansion joint. If the Contractor elects to use the welded rail expansion joint, the opening and deck dimensions shall be modified according to the dimensions detailed on this sheet. Required modifications shall be made at no additional cost to the State.

All steel components shall be galvanized after fabrication according to Article 520.03 of the Standard Specifications.

Maximum space between rail segments shall be 3/16", sealed with a suitable sealant. Joints in rails within 10 ft. of curbs shall be welded.

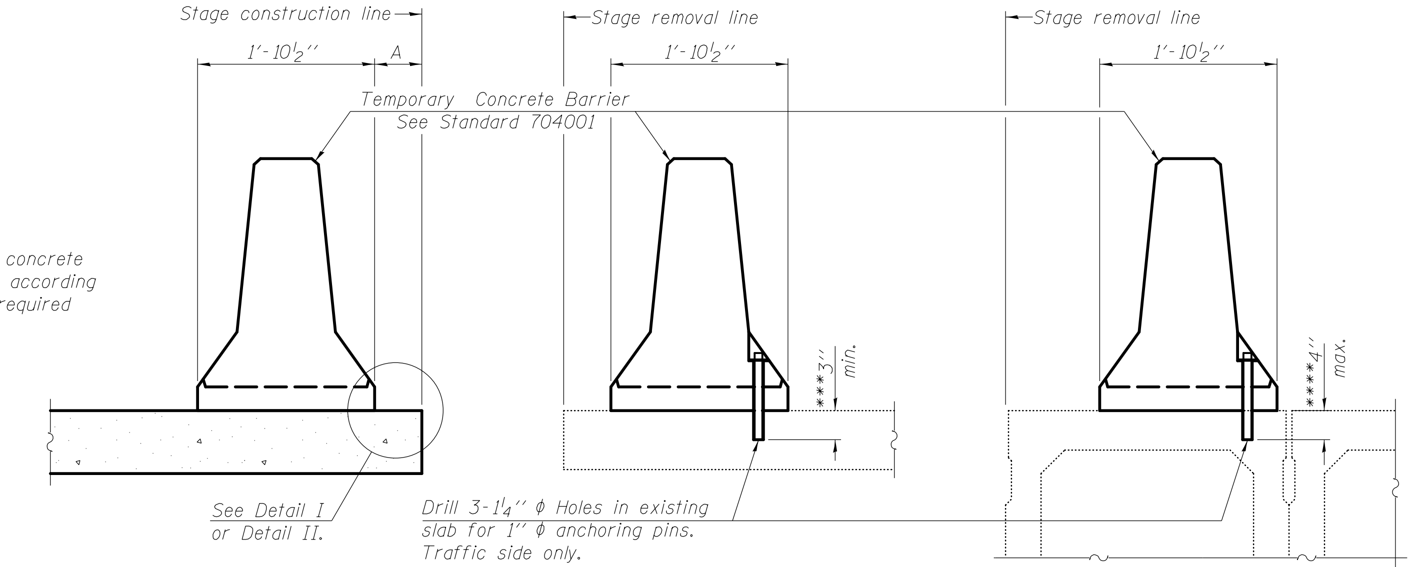
When "A" is 3'-1'' or less, the temporary concrete barrier shall be anchored to the new slab according to Detail I or Detail II. No anchorage is required when "A" is greater than 3'-1''.



NEW SLAB — EXISTING SLAB — EXISTING DECK BEAM

SECTIONS THRU SLAB OR DECK BEAM

NOTES

Detail I - With Bar Splicer or Couplers: Connect one (1) 1'' x 7' 'x ''W'' steel PL to the top layer of couplers with 2-5/8'' ϕ bolts screwed to coupler at approximate ℄ of each barrier panel.

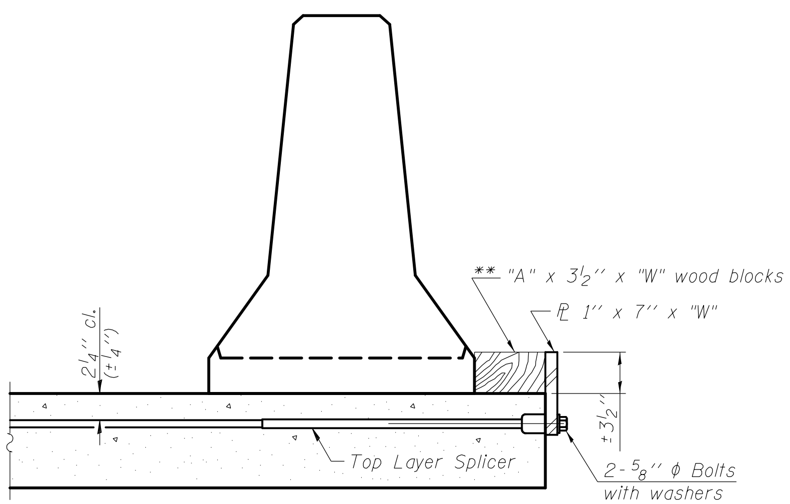
Detail II - With Extended Reinforcement Bars: Connect one (1) 1'' x 7'' x ''W'' steel PL to the concrete slab or concrete wearing surface with 2-5/8'' ϕ Expansion Anchors or cast in place inserts spaced between the top layer of reinforcement at approximate ℄ of each barrier panel.

Cost of retainer assembly is included with Temporary Concrete Barrier.

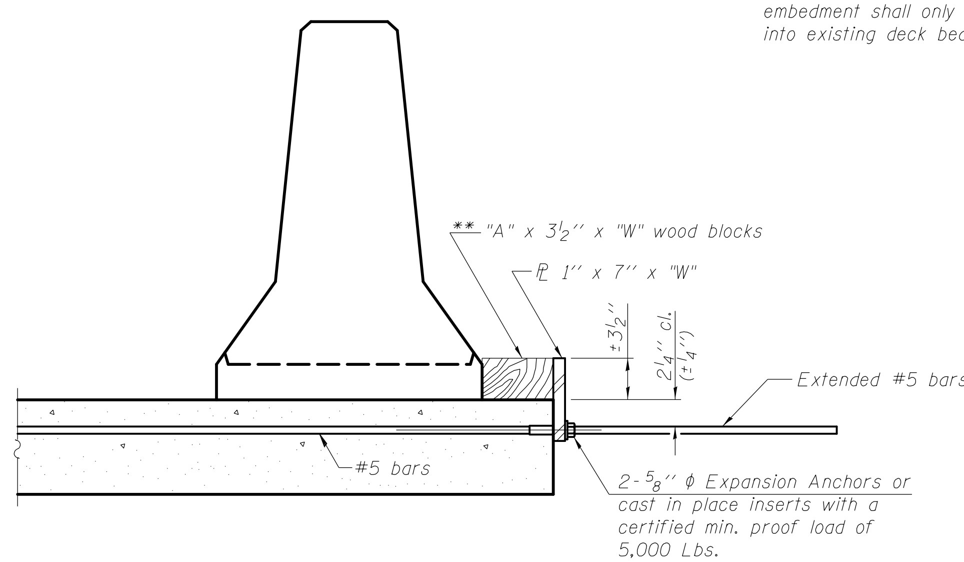
The 1'' x 7'' x ''W'' plate shall not be removed until stage II construction forms and all reinforcement bars are in place and the concrete is ready to be placed.

*** Dimension shown is minimum required embedment into concrete. If hot-mix asphalt wearing surface is present, minimum embedment shall be in addition to wearing surface depth.

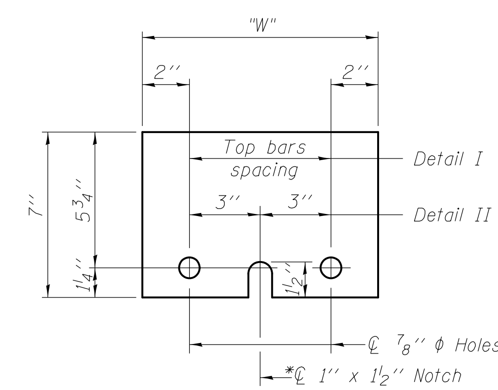
**** If existing deck beam is to remain in place after stage construction, embedment shall only be into wearing surface and not into existing deck beam concrete.



DETAIL I



DETAIL II



STEEL RETAINER PL 1'' x 7'' x ''W''

* Required only with Detail II

RETAINER ASSEMBLY

** Wood blocks may be omitted when required to provide minimum stage traffic lane width. When the wood blocks are omitted, the concrete barrier shall be in direct contact with the steel retainer plate.

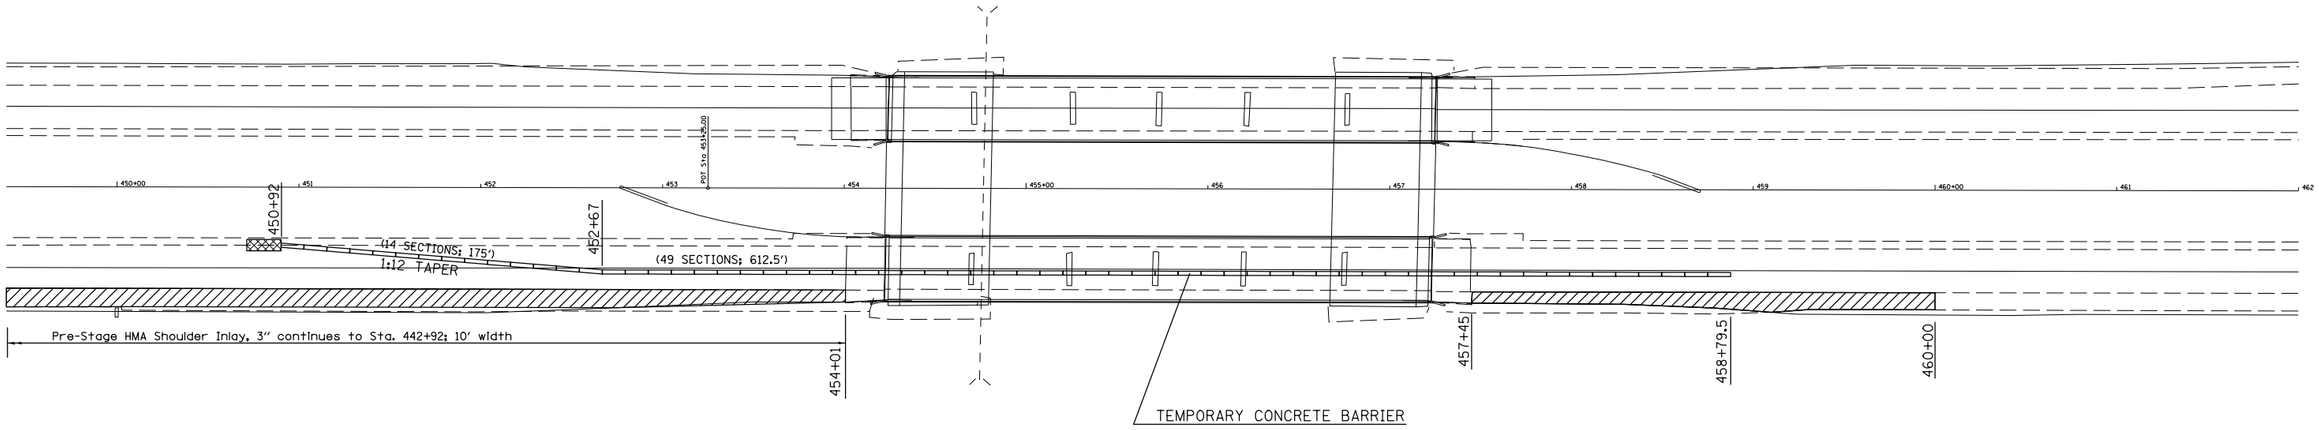
TEMPORARY CONCRETE BARRIER LAYOUT–STAGE I
S.N. 010–0009 (NB)



NOTES:

STAGING DETAILS SHALL BE IN ACCORDANCE WITH TRAFFIC CONTROL AND PROTECTION STANDARDS 701400 AND 701402.

WORK WITHOUT TEMPORARY CONCRETE BARRIER SHALL BE IN ACCORDANCE WITH TRAFFIC CONTROL AND PROTECTION STANDARDS 701400 AND 701406.

VERTICAL PANELS WITH LIGHTS SHALL BE ATTACHED AT 25 FOOT CENTERS ON THE BARRIER WALL TAPER. REFLECTORS SHALL BE ATTACHED TO GUARDRAIL AT 25 FT CENTERS. COST INCLUDED WITH TRAFFIC CONTROL AND PROTECTION STANDARD 701402.

REFLECTORIZED TEMPORARY MARKING TAPE SHALL BE PLACED THROUGHOUT THE TAPER AND ALONGSIDE BOTH SIDES OF THE WORK AREA. EXISTING MARKINGS THAT CONFLICT WITH THE STAGED TRAFFIC MARKINGS SHALL BE REMOVED. COST TO REMOVE EXISTING MARKINGS AND FOR THE PLACEMENT AND REMOVAL OF TEMPORARY MARKINGS SHALL BE INCLUDED WITH TRAFFIC CONTROL AND PROTECTION STANDARD 701402.

PRIOR TO ROUTING TRAFFIC ONTO THE SHOULDERS, THE CONTRACTOR SHALL SECURE ANY GRATES ON SHOULDER INLETS AS DIRECTED BY THE ENGINEER. THIS WORK SHALL BE PAID FOR ACCORDING TO ARTICLE 109.04 OF THE STANDARD SPECIFICATIONS.

PORTABLE CHANGEABLE MESSAGE SIGNS ARE REQUIRED ONE WEEK PRIOR TO CONSTRUCTION. THE RESIDENT ENGINEER OR TRAFFIC CONTROL SUPERVISOR SHALL PROVIDE AN APPROPRIATE MESSAGE.

BM #4376-2: Chiseled square located on the southeast corner of the southeast wingwall of S.N. 010-0010; Station 454+16, 23.8' Lt., Elev. 766.82

Existing Structure: S.N. 010-0010 (SB), was originally built in 1964 as F.A. Interstate 57 Section 10-33HVBR at Station 456+43.07 in Champaign County. The structure carries I-57 over IL 10 and the CNRY. The structure consists of a six span cast-in-place concrete deck on steel beams supported by hammerhead piers and pile bent abutments. Back to back of abutments is 303'-2" and out to out width of the deck is 36'-10". In 1977, the structure had a waterproofing membrane system installed, H.M.A. wearing surface placed, expansion joints reconstructed, and deck patched as Section District 5 Bridge Deck Waterproofing 1977-1. In 1988, the structure was rehabilitated as Section 10-33HVB-I&(10-33HB-2)I. The structure had new expansion joints installed, new parapets constructed, deck drains replaced, bearings repositioned, and slopewall repaired. In 2003, a new H.M.A. wearing surface was installed with Section 10((31,32)RS-1;33RS-4). In 2006, the preformed joints at the abutments were replaced with polymer concrete and silicone joints, and the preformed joint at the pier was replaced with a silicone joint by the District 5 Bridge Crew. In 2007, the District 5 Bridge Crew performed partial depth patching on the deck. The existing deck will be removed and replaced with a slightly wider deck; existing beams are to remain and have shear studs added in positive moment regions. Beam end repairs will be performed, and end diaphragms and bearings under open joints will be replaced. The substructure will be repaired, modified and reused. Traffic will be staged during construction. No Salvage.

SCOPE OF WORK

1. Remove deck and approach pavements.
2. Make deck composite in positive moment regions by installing stud shear connectors.
3. Perform steel superstructure repairs.
4. Remove and replace abutment backwalls and expansion joints.
5. Perform epoxy crack injection and formed concrete repairs at abutments and piers, perform Pier 3 repairs and repair slopewalls.
6. Remove expansion bearings at abutments and Pier 3 and replace with elastomeric bearings with steel extensions.
7. Pour new deck and approach slabs.

STATION 456+43.07

		CHECKED - JSD	REVISED -			57	10-33HVBR	CHAMPAIGN	88	36
	PLOT SCALE =	DRAWN - KJW	REVISED -					CONTRACT NO. 90951		
	PLOT DATE = 4/27/2015	CHECKED - JSD	REVISED -		SHEET NO. S-1 OF S-29 SHEETS		ILLINOIS FED. AID PROJECT			

GENERAL NOTES

1. Fasteners shall be AASHTO A325 Type 1, mechanically galvanized bolts. Bolts $^{7}/_{8}$ in. ϕ, holes $^{15}/_{16}$ in. ϕ, unless otherwise noted.

2. Calculated weight of Structural Steel = 12,310 lbs. Gr. 36

3. No field welding is permitted except as specified in the contract documents.

4. Reinforcement bars designated (E) shall be epoxy coated.

5. Prior to pouring the new concrete deck, all heavy or loose rust, loose mill scale, and other loose or potentially detrimental foreign material shall be removed from the surfaces in contact with concrete. Tightly adhered paint may remain unless otherwise noted. Removal shall be accomplished by methods that will not damage the steel and the cost will be included in the pay item covering removal of the existing concrete.

   As directed by the Engineer, existing construction accessories welded to the top flange of beams and girders shall be removed. The weld areas shall be ground flush and inspected for cracks using magnetic particle testing (MT) or dye penetrant testing (PT) by qualified personnel approved by the Engineer. Any cracks that cannot be removed by grinding $^{1}/_{4}$ in. deep shall be identified and reported to the Bureau of Bridges and Structures for further disposition. The cost of removing welded accessories, grinding and inspecting weld areas and grinding cracks will be paid for according to Article 109.04 of the Standard Specifications.

6. Plan dimensions and details relative to existing plans are subject to nominal construction variations. The Contractor shall field verify existing dimensions and details affecting new construction and make necessary approved adjustments prior to construction or ordering of materials. Such variations shall not be cause for additional compensation for a change in scope of the work, however, the Contractor will be paid for the quantity actually furnished based upon the unit price bid for the work.

7. Bearing seat surfaces shall be constructed or adjusted to their designated elevations within a tolerance of $^{1}/_{8}$ in. (0.01 ft.). Adjustment shall be made either by grinding the surface or by shimming the bearings.

8. Concrete Sealer shall be applied to the designated areas of new concrete at Pier 3, Pier 5 and the abutments.

9. Cleaning and field painting of structural steel shall be done under a separate painting contract.

10. The existing structural steel coating contains lead. The Contractor shall take appropriate precautions to deal with the presence of lead on this project.

11. All new structural steel shall be shop painted with an inorganic zinc rich primer per AASHTO M 300, Type 1, including structural steel for repairs. Cost of painting new structural steel shall be included in Furnshing and Erecting Structural Steel and cost of painting structural steel required for repairs shall be included with Structural Steel Repair.

12. Protective shield system details and calculations shall be submitted to the Canadian National Railway Company for review and approval prior to commencement of operations.

13. The proposed painting containment and protective shield systems and any other construction means and methods selected by the Contractor shall not infringe on the 21'-6" temporary vertical clearance, measured from the top of any of the rails, without written approval from Canadian National Railway Company.

14. A two-week look-ahead schedule must be submitted to Canadian National Railway Company for approval prior to commencement of operations.

15. The Contractor shall coordinate with the Canadian National Railway Company (CNRY) flagman to schedule track time for work in the CNRY right-of-way.

16. Slipforming of the parapet will not be allowed.

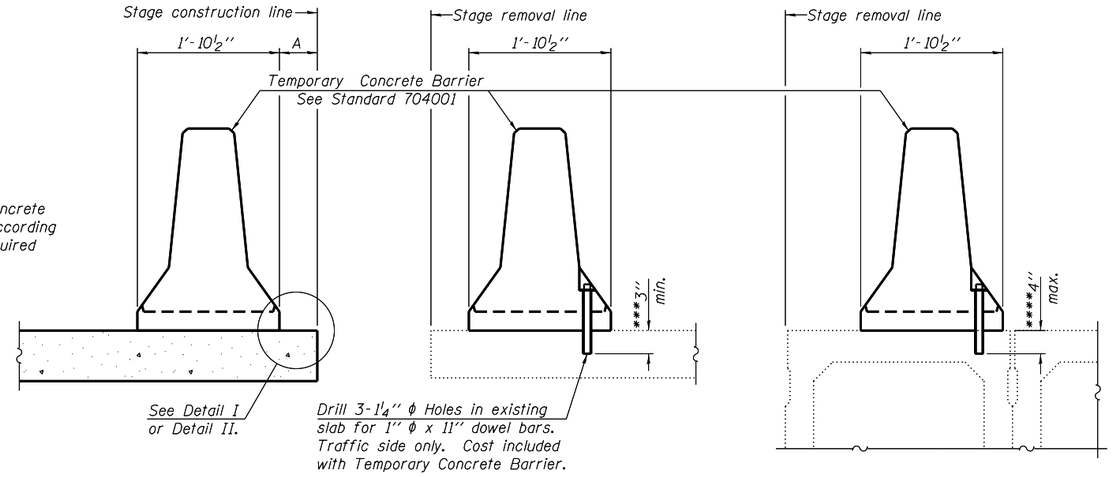
When "A" is 3'-6" or less, the temporary concrete barrier shall be anchored to the new slab according to Detail I or Detail II. No anchorage is required when "A" is greater than 3'-6".



NEW SLAB

EXISTING SLAB

EXISTING DECK BEAM

NOTES

Detail I - With Bar Splicer or Couplers:
Connect one (1) 1'' x 7¼" x ''W'' steel PL to the top layer of couplers with 2-⅝'' ϕ bolts screwed to coupler at approximate ℄ of each barrier panel.

Detail II - With Extended Reinforcement Bars:
Connect one (1) 1'' x 7¼'' x ''W'' steel PL to the concrete slab or concrete wearing surface with 2-⅝'' ϕ Expansion Anchors or cast in place inserts spaced between the top layer of reinforcement at approximate ℄ of each barrier panel.

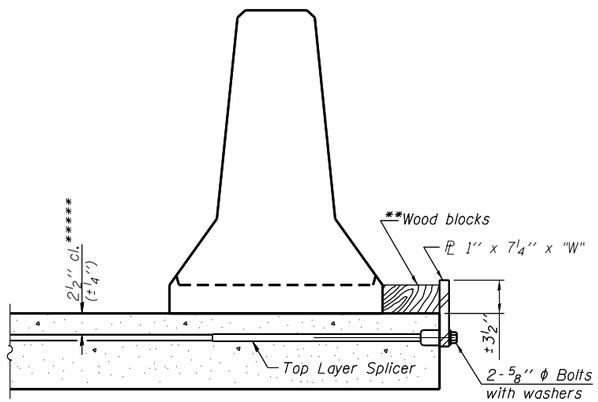
Cost of anchorage is included with Temporary Concrete Barrier.

The 1'' x 7¼'' x ''W'' plate shall not be removed until stage II construction forms and all reinforcement bars are in place and the concrete is ready to be placed.

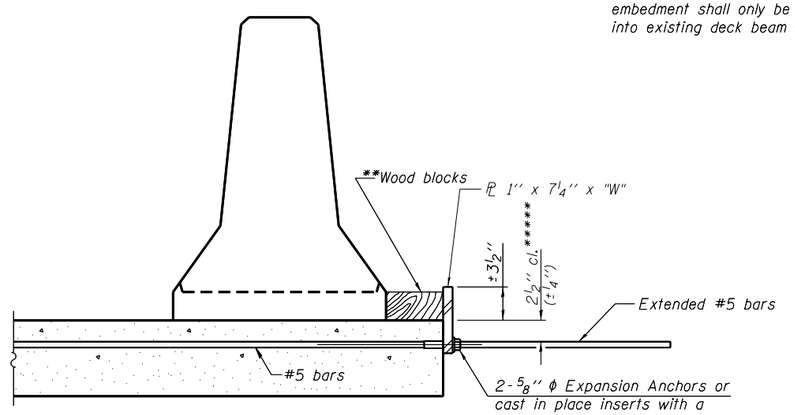
SECTIONS THRU SLAB OR DECK BEAM

*** Dimension shown is minimum required embedment into concrete. If hot-mix asphalt wearing surface is present, minimum embedment shall be in addition to wearing surface depth.

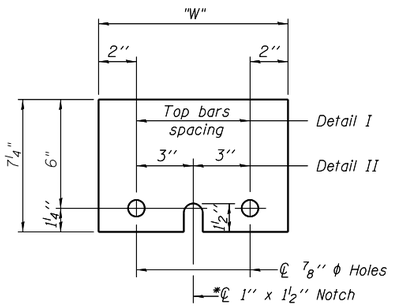
**** If existing deck beam is to remain in place after stage construction, embedment shall only be into wearing surface and not into existing deck beam concrete.



DETAIL I



DETAIL II



STEEL RETAINER PL 1'' x 7¼'' x ''W''

* Required only with Detail II

***** Prior to ¼" diamond grinding

** Wood blocks may be omitted when required to provide minimum stage traffic lane width. When the wood blocks are omitted, the concrete barrier shall be in direct contact with the steel retainer plate.

"W" = Top bars spacing + 4''

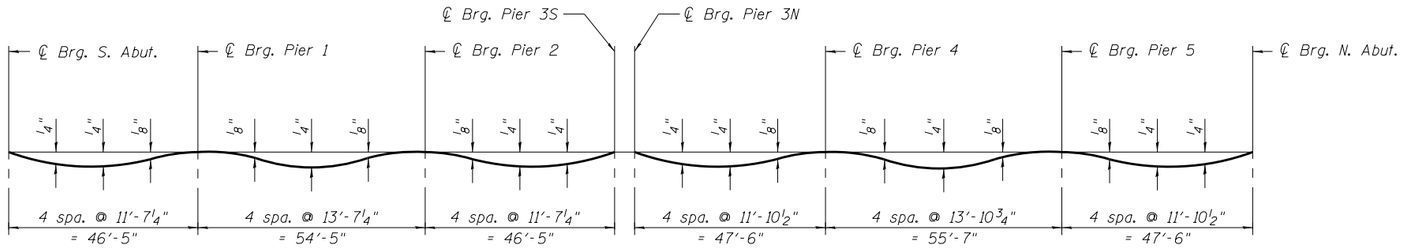
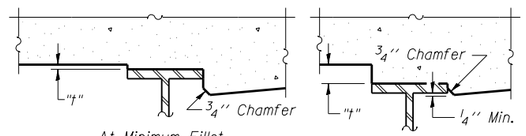
PLAN



DEAD LOAD DEFLECTION DIAGRAM

(Includes weight of concrete only.)

Note:
The above deflections are not to be used in the field if the engineer is working from the grade elevations adjusted for dead load deflections and grinding as shown on sheets S-6 through S-8.



To determine "t": After all bearings have been replaced, elevations of the top flanges of the beams shall be taken at intervals shown on sheets S-6 through S-8. These elevations subtracted from the "Theoretical Grade Elevations Adjusted for Dead Load Deflection and Grinding" shown on sheets S-6 through S-8, minus slab thickness, equals the fillet heights "t" above top flange of beams.

The slab is to be ground after curing to achieve smoothness, but the slab is not to be ground to elevations below the "Theoretical Grade Elevations" shown on sheets S-6 through S-8. For grinding the deck, see Special Provisions.

PLAN
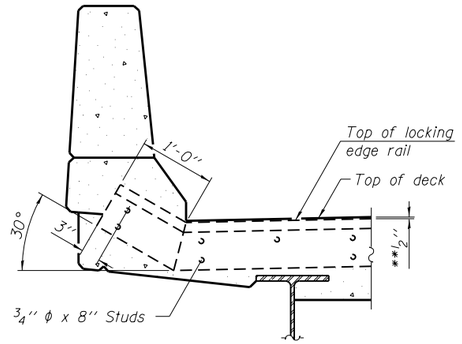
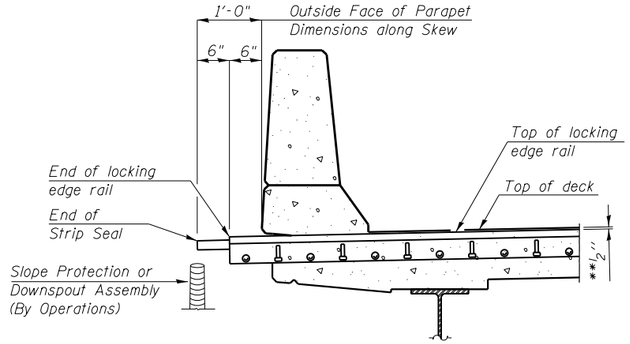
(For skews ≤ 30°)



AT PIER 3



AT NORTH AND SOUTH ABUTMENTS

Notes:

The strip seal shall be made continuous and shall have a minimum thickness of 1/4". The configuration of the strip seal shall match the configuration of the Locking Edge Rails. Open or "webbed" strip seal gland configurations are not permitted. The gland shall be sized for a maximum rated movement of 4 inches.

The Locking Edge Rails depicted are conceptual only, except for the minimum dimensions shown. The actual configuration of the Locking Edge Rails and matching strip seal may vary from manufacturer to manufacturer. Flanged edge rails will not be allowed. Locking Edge Rails may be spliced at slope discontinuities.

The manufacturer's recommended installation methods shall be followed.

The joint opening and deck dimensions detailed on the superstructure are based on a rolled rail expansion joint. If the Contractor elects to use the welded rail expansion joint, the opening and deck dimensions shall be modified according to the dimensions detailed on this sheet. Required modifications shall be made at no additional cost to the State.

All steel components shall be galvanized after fabrication according to Article 520.03 of the Standard Specifications.

Maximum space between rail segments shall be 3/16", sealed with a suitable sealant. Joints in rails within 10 ft. of curbs shall be welded.

Parapet plates and anchorage studs for skews > 30° included in the cost of Preformed Joint Strip Seal.

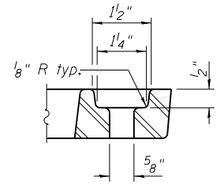
VANE GRATE DETAIL



BOLT HOLE DETAIL

Notes:

All cast iron parts shall be gray iron conforming to the requirements of AASHTO M 105, Class 35B.

Bolts, anchor studs, washers and nuts shall conform to the requirements of ASTM A 307 and shall be galvanized according to AASHTO M 232.

Downspouts located on the exterior side of a painted steel fascia beam shall be painted with the finish coat specified for the exterior side of the fascia beam.

As an alternate, bolts, anchor studs, washers and nuts may be stainless steel according to Article 1006.29(d) of the Standard Specifications.

Structural steel weldments of equal sections and of the same configuration may be substituted for the cast iron scupper frame. Fillet or full penetration welds shall be used for the weldments. Details shall be submitted to the Engineer for approval. Structural steel weldments shall not be substituted for the cast iron scupper grate. Structural steel frames and downspouts shall be galvanized according to AASHTO M111.

The Contractor shall take appropriate measures to assure that Protective Coat is not applied to the scupper.

Cost of the Grate, Frame, Downspout, Anchor Studs, Bolts, Washers and Nuts including complete installation of the scupper shall be paid for at the contract unit price each for Drainage Scupper, DS-11.

Alternate fiberglass downspout conforming to ASTM D 2996 with a short-time rupture strength hoop tensile stress of 30,000 psi min. may be used in lieu of the cast iron or steel equivalent.

* Compact section
** Braced non-compact and partially braced section

Notes:

Cost for Beam End Repairs as detailed on the plans and as specified in the Special Provisions shall be included in the cost of Structural Steel Repair.

Fasteners shall be high strength bolts. Flange holes for structural steel repair shall be 15/16"ϕ for 7/8"ϕ bolts except as noted. Web holes for structural steel repair shall be 13/16"ϕ for 3/4"ϕ bolts. Diaphragm splice holes shall be 13/16"ϕ for 3/4"ϕ bolts.

All new diaphragms and clip angles to be paid for as Furnishing and Erecting Structural Steel. All other steel and bolts to be paid for as Structural Steel Repair.

The cost of field drilling is included in Structural Steel Repair

The cost of grinding is included in Structural Steel Repair

BILL OF MATERIAL

ITEM	UNIT	TOTAL
Structural Steel Repair	Pound	2,780
Structural Steel Removal	Pound	6,140
Furnishing and Erecting Structural Steel	Pound	6,480

ELEVATION AT ABUTMENT

SECTION A-A

TYPE II TFE ELASTOMERIC EXP. BRG.

Notes:

Diaphragm removal and reinstallation may be required to facilitate drilling holes. Cost included with Furnishing and Erecting Structural Steel.

New steel extensions, shim plates and connection bolts are included with Furnishing and Erecting Structural Steel.

Prior to ordering any material, the Contractor shall verify in the field all bearing height and shim thickness dimensions.

Anchor bolts shall be ASTM F1554 all-thread (or an Engineer-approved alternate material) of the grade(s) and diameter(s) specified. The corresponding specified grade of AASHTO M314 anchor bolts may be used in lieu of ASTM F1554.

Anchor bolts for Type II bearings shall be placed in holes drilled through the bottom bearing plate after members are in place. Side retainers shall be placed after bolts are installed.

Drilled and set anchor bolts shall be installed according to Article 521.06 of the Standard Specifications.

Side retainers shall be included in the cost of Elastomeric Bearing Assembly, Type II.

The ⅛'' PTFE sheet shall be bonded directly to the top steel plate with a two-component, medium viscosity epoxy resin, conforming to the requirements of the Federal Specification MMM-A-134, Type I. The bond agent shall be applied on the full area of the contact surfaces.

Bonding of ⅛'' PTFE sheet during vulcanizing process will be permitted provided the process and method of adjusting assembly height is approved by the Engineer.

Two ⅛ in. adjusting shims shall be provided for each bearing in addition to all other plates or shims and placed as shown on bearing details.

Fill plates are included in cost of Furnishing and Erecting Structural Steel.

Jack and Remove Existing Bearing:

The maximum Dead Load Reaction with deck removed (per bearing at each abutment) is 2.3 kips. Minimum jack capacity is 4 kips.

The Contractor shall submit, for approval by the Engineer, plans for jacking and removing the existing bearings prior to commencing any work on the bearings. In each stage, jacking and removal of the existing bearings shall be done after the existing deck is removed and before the new deck is poured. The new bearings and steel extension shall be in place and the jacks lowered prior to pouring the new concrete deck in each stage. See Special Provision.

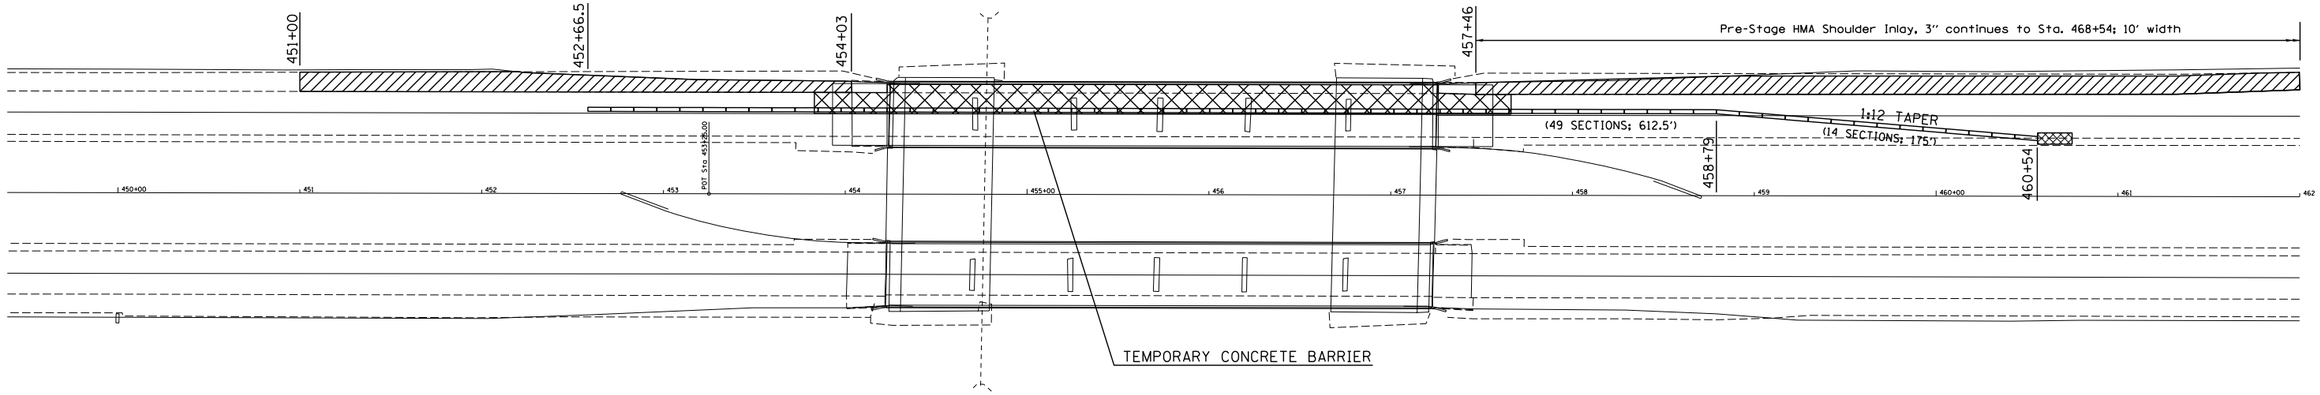
TEMPORARY CONCRETE BARRIER LAYOUT–STAGE I
S.N. 010–0010 (SB)



NOTES:

STAGING DETAILS SHALL BE IN ACCORDANCE WITH TRAFFIC CONTROL AND PROTECTION STANDARDS 701400 AND 701402.

WORK WITHOUT TEMPORARY CONCRETE BARRIER SHALL BE IN ACCORDANCE WITH TRAFFIC CONTROL AND PROTECTION STANDARDS 701400 AND 701406.

VERTICAL PANELS WITH LIGHTS SHALL BE ATTACHED AT 25 FT CENTERS ON THE BARRIER WALL TAPER. REFLECTORS SHALL BE ATTACHED TO GUARDRAIL AT 25 FT CENTERS. COST INCLUDED WITH TRAFFIC CONTROL AND PROTECTION STANDARD 701402.

REFLECTORIZED TEMPORARY MARKING TAPE SHALL BE PLACED THROUGHOUT THE TAPER AND ALONGSIDE BOTH SIDES OF THE WORK AREA. EXISTING MARKINGS THAT CONFLICT WITH THE STAGED TRAFFIC MARKINGS SHALL BE REMOVED. COST TO REMOVE EXISTING MARKINGS AND FOR THE PLACEMENT AND REMOVAL OF TEMPORARY MARKINGS SHALL BE INCLUDED WITH TRAFFIC CONTROL AND PROTECTION STANDARD 701402.

PRIOR TO ROUTING TRAFFIC ONTO THE SHOULDERS, THE CONTRACTOR SHALL SECURE ANY GRATES ON SHOULDER INLETS AS DIRECTED BY THE ENGINEER. THIS WORK SHALL BE PAID FOR ACCORDING TO ARTICLE 109.04 OF THE STANDARD SPECIFICATIONS.

PORTABLE CHANGEABLE MESSAGE SIGNS ARE REQUIRED ONE WEEK PRIOR TO CONSTRUCTION. THE RESIDENT ENGINEER OR TRAFFIC CONTROL SUPERVISOR SHALL PROVIDE AN APPROPRIATE MESSAGE.

DETAIL OF ARMOR ANGLE EXPANSION DEVICE
(TO BE USED ON ABUTMENTS AND OVER PIER 3 NO. REQ'D = 6)

NOTE: THE ARMOR ANGLE DEVICE SHALL BE FABRICATED TO FIT THE ROADWAY. ALL SURFACES SHALL RECEIVE TWO SHOP COATS OF RED LEAD PAINT, EXCEPT THE STUDS. THE STUDS SHALL NOT BE PAINTED.

NOTES

1. ANCHOR BOLTS SHALL BE SET BEFORE RIVETING DIAPHRAGMS OVER PIERS AND ABUTMENTS. SEE ARTICLE 54.9 (5) FOR SETTING OF MASONRY BEARING PLATES AND ANCHOR BOLTS.
2. ALL SOLSTERS, ROCKERS, BEARING PLATES, LEAD PLATES, ANCHOR BOLTS, PINTLES, AND WASHERS SHALL BE FABRICATED PAINTED AND SET IN ACCORDANCE WITH ARTICLE 51.15 AND ARE INCLUDED FOR PAYMENT AS STRUCTURAL STEEL.
3. BEAMS SHALL CONFORM TO THE SPECIFICATIONS FOR STRUCTURAL STEEL A.S.T.M. DESIGNATION A-36.
4. RIVETS 3/4" ø, OPEN HOLES 13/16" ø, UNLESS NOTED.
5. HIGH STRENGTH BOLTS MAY BE SUBSTITUTED FOR FIELD RIVETS IN ACCORDANCE WITH ARTICLE 54.9 (4) OF THE STANDARD SPECIFICATIONS.

DRIVE FIT TYPE, 16 REQUIRED.
INCIDENTAL TO ITEM "ALUMINUM HANDRAIL"

GENERAL NOTES

ALL POSTS SHALL BE PLACED NORMAL TO PARAPET.

ALL POSTS SHALL BE OF ALUMINUM CONFORMING TO ASTM SPECIFICATION B-108 ALLOY 56-T6B-T7.

ALL RAIL TUBING SHALL BE OF ALUMINUM CONFORMING TO ASTM SPECIFICATION B-235 ALLOY 6061-T6.

RAIL TUBING MAY BE CUT TO MAX. THREE PANEL LENGTHS.

FOR MATERIAL COMPOSITION OF PREFABRICATED PIP, SEE ART. 504.2 (f), (BEARINGS AND ANCHORAGE), OF THE STD. SPECS.

SET SCREWS SHALL BE OF ALUMINUM CONFORMING TO ASTM SPECIFICATION B-211 ALLOY 2024-T4.

THE CONTRACT UNIT PRICE PER LINEAL FOOT FOR ALUMINUM HANDRAIL SHALL INCLUDE THE FURNISHING, FABRICATION, TRANSPORTATION AND ERECTION OF ALL MATERIAL.

Aluminum Handrail shall be measured in lineal feet. The length paid for shall be the overall length along the top longitudinal railing member through all posts and gaps.

ILLINOIS FED. AID PROJECT

REVISED BY SPFLD. BRIDGE OFFICE.

Bench Mark: None

Existing Structure: No. 010-0009(N.B.) & 010-0010(S.B.) were built in 1964. In 1977 the structures had waterproofing membrane system installed, bituminous overlay placed, expansion joints reconstructed and patching of the deck was accomplished. The structures consist of six span cast-in-place concrete decks on steel beams supported by solid hammerhead piers and pile bent abutments. Bk. to Bk. of abutments is 303'-2" and Out to Out width is 36'-0" for each structure.

Traffic to be maintained utilizing stage construction.

Salvage: Aluminum handrail shall be salvaged and stockpiled within State R.O.W. by the Bridge Contractor for later pickup by District Maintainance forces.

PLAN

GENERAL NOTES

All new struct. steel shall be shop painted with two coats of the Basic Lead Silico-Chromate paint system.

Field welding of construction accessories will not be permitted to the bottom flange of beams or girders nor to the top flange for a distance equal to one-fourth the span length each way from the pier supports. Field welding in other areas will be permitted only when approved by the Engineer.

Reinforcement bars shall conform to the requirements of AASHTO M-31, M-42 or M-53 Grade 60.

Slope wall shall be reinforced with welded wire fabric. 6" x 6" - W4.0 x 4.0, weighing 58 lbs. per 100 sq. ft.

Plan dimensions and details relative to existing structure have been taken from existing plans and are subject to nominal construction variations. It shall be the Contractor's responsibility to verify such dimensions and details in the field and make necessary approved adjustments prior to construction or ordering of materials. Such variations shall not be cause for additional compensation for a change in the scope of the work, however, the Contractor will be paid for the quantity actually furnished at the unit price bid for the work.

Expansion bolts shall consist of approved expansion anchors, providing minimum certified proof load = 4,080 lbs., and ¾"ϕ x 12" hooked bolts.

Protective Coat shall not be applied to surfaces to which Waterproofing Membrane System is applied.

Span 6 L=47'6"
(**)DEAD LOAD DEFLECTION DIAGRAM
(Includes weight of concrete only)
(**)To determine fillet: Prior to concrete removal, elevations shall be taken at the top of the Concrete of the slab const. Jts. every ten feet along the length of the bridge. This is designated as Elev. A as shown in cross sections. The theoretical grade elevations of the exterior beam may then be calculated as follows: Elev. B=(Elev. A)-(.084). *
Stage II Const.
Stage I Const.
Lap waterproofing during Stage II Const.
Bituminous surfacing
(**)WATERPROOFING TREATMENT
* Following Concrete Removal, the elevations of the top flanges of the beams shall be taken at the same intervals as those used for Elev. A. These are designated as Elev. C. Then the fillet heights "t" are computed as follows: t=(Elev. B)-(Elev. C)-(.58)+(Dead Load Deflection) where slab thickness is .58'. These elevations and fillet heights will result in a varying thickness of Class I Surfacing.

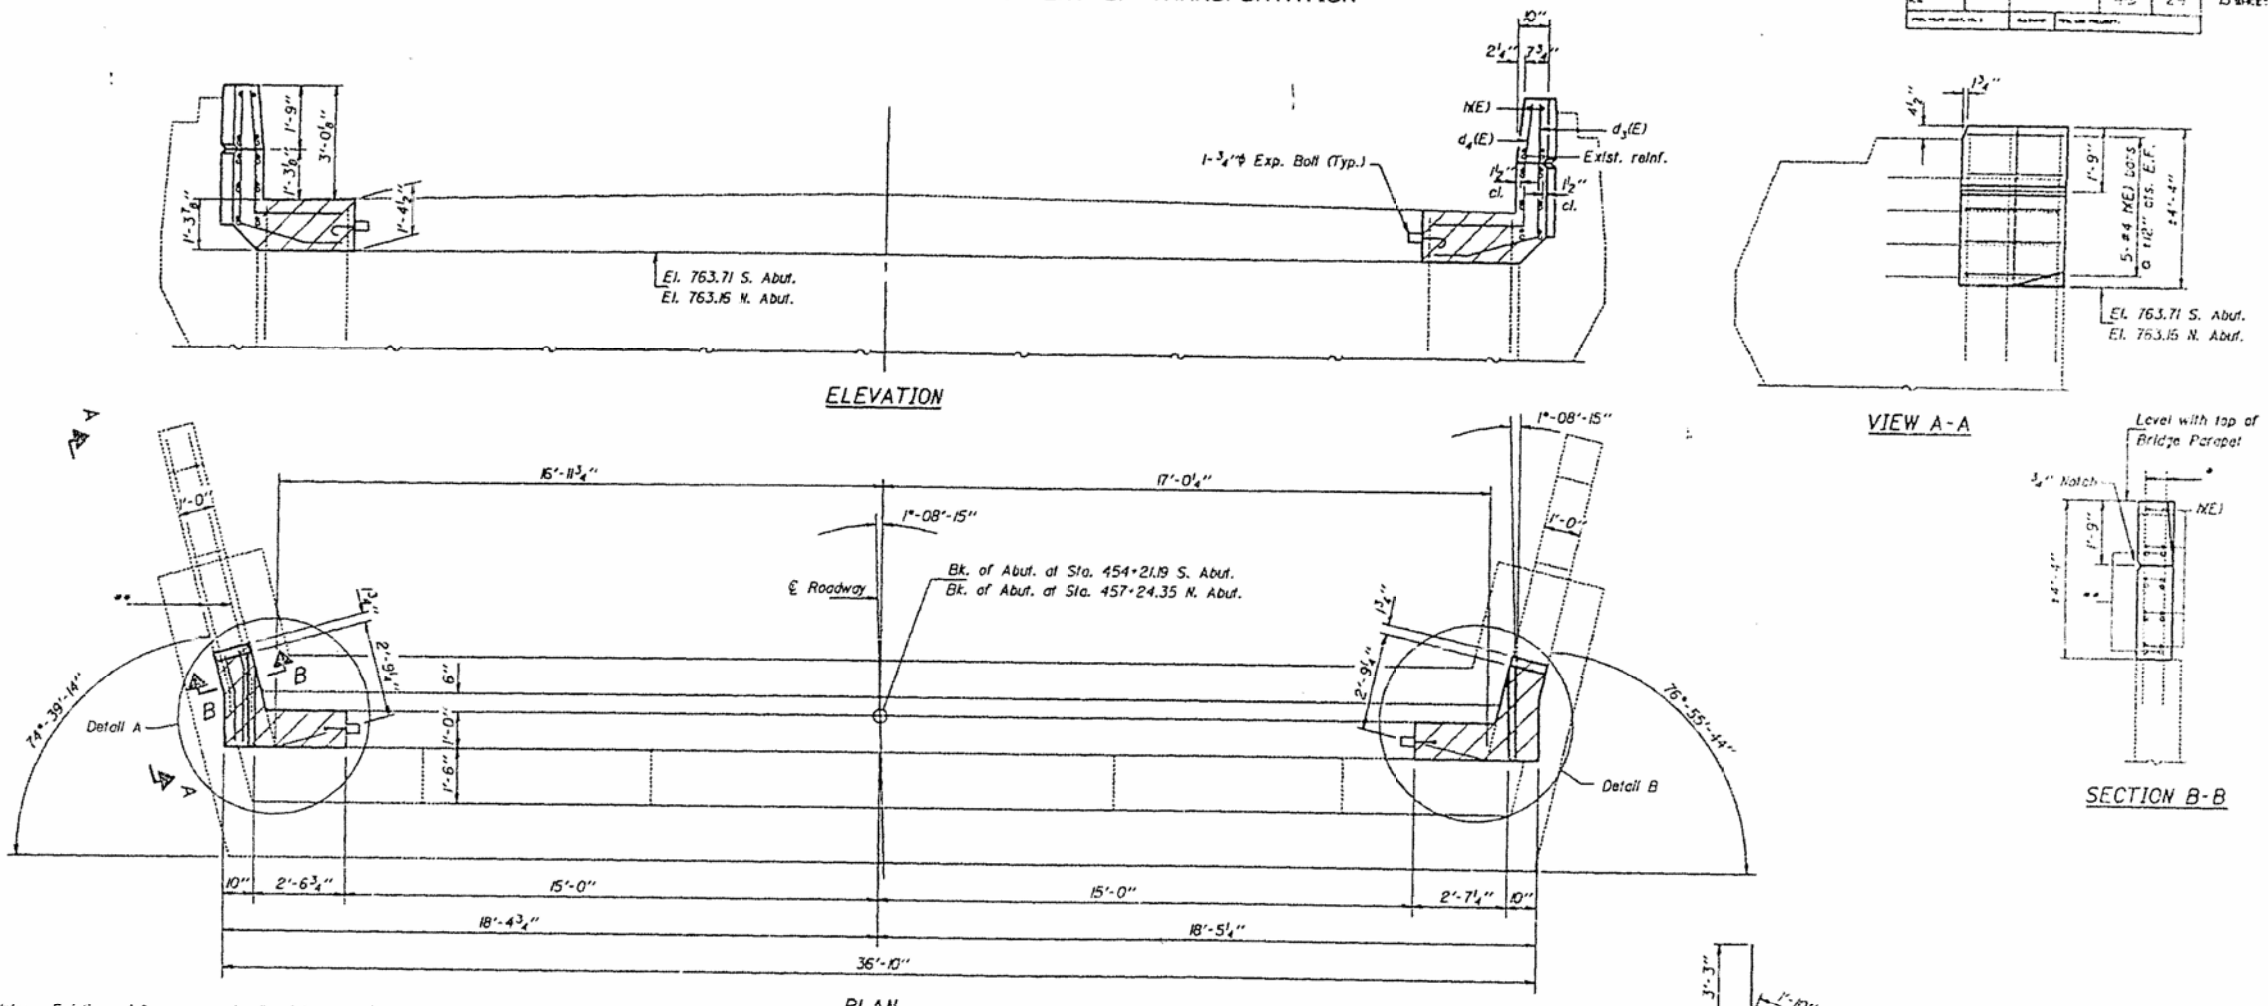
SHEET NO. 11 — 13 SHEETS



Notes: Existing reinforcement extending into removal area shall be cleaned, straightened and incorporated into the new construction. Cost incidental.

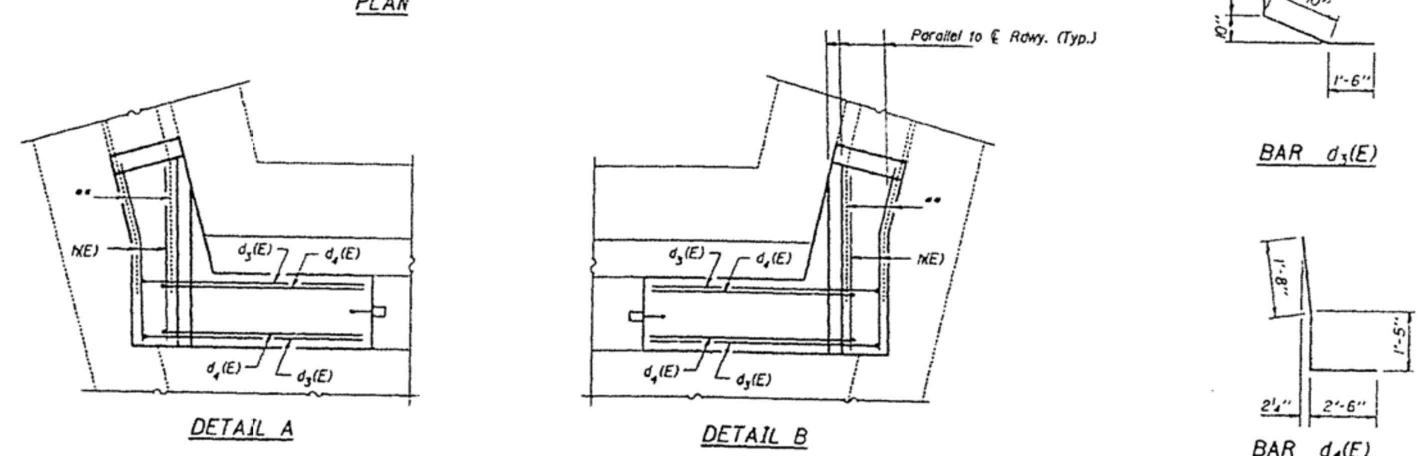
For Stage Construction details see sh.# 2 of 13.

Existing name plate shall be removed, cleaned and reinstalled. Cost incidental to Class X Concrete. For location see sheet# 1 of 13 sheets.

* Cut off excess length of existing reinforcement bars, as directed by the Engineer.

** Bend existing reinforcement bars to meet new geometry requirements, as directed by the Engineer.

Hatched area shall be poured after superstructure forms have been removed. Class X Concrete quantity is included with superstructure.



TWO ABUTMENTS BILL OF MATERIAL

Bar	No.	Size	Length	Shape
d_3(E)	8	#4	6'-7"	
d_4(E)	8	#5	5'-7"	
▫ h(E)	40	#4	3'-7"	
Reinforcement Bars Epoxy Coated			Lb.	180
Expansion Bolts ¾"φ			Each	4

▫ Bend in field

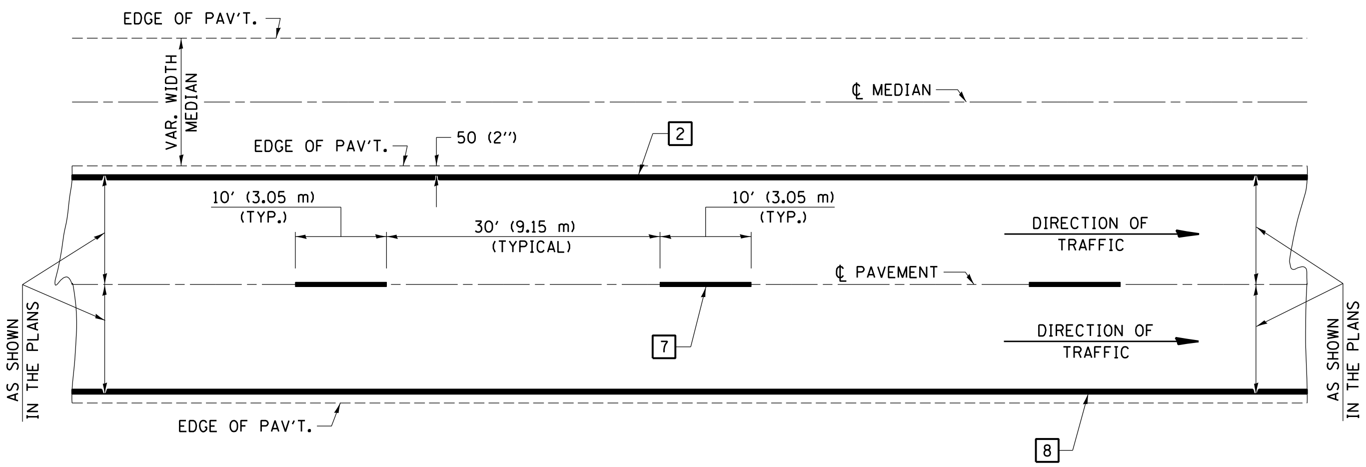
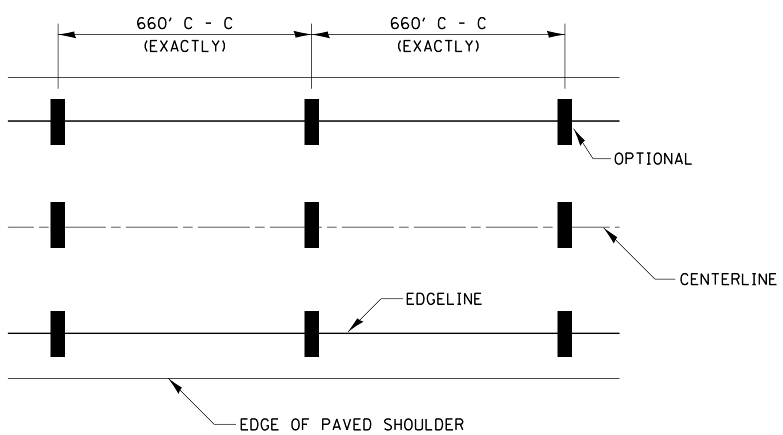
CENTERLINE INTERSTATE OR MULTI-LANE TWO WAY DIVIDED HIGHWAY



NOTE: PAVEMENT MARKINGS ARE TO BE EXTENDED THROUGH OMISSIONS WHEN APPLICABLE.

NOTE: SEE ARTICLES 780.04 & 781.03 FOR LOCATION OF STRIPES AND MARKERS RELATIVE TO EDGES OR JOINTS.

FOR RAISED REFLECTIVE PAVEMENT MARKERS, REFER TO STANDARD 781001.



IT WILL BE NECESSARY TO HAVE A REPRESENTATIVE OF THE STATE POLICE PRESENT SO THAT THE ACCURACY OF MEASUREMENT CAN BE ATTESTED TO IN COURT.
