GENERAL NOTES

1. THE THICKNESS OF HMA SHOWN ON THE PLANS IS THE NOMINAL THICKNESS. DEVIATIONS FROM THE NOMINAL THICKNESS WILL BE PERMITTED WHEN SUCH DEVIATIONS OCCUR DUE TO IRREGULARITIES IN THE EXISTING SURFACE OR BASE ON WHICH THE HMA IS PLACED.

2. THE HMA SURFACE OF ALL PRIVATE ENTRANCES SHALL BE MADE NEATLY, IN A WORKMANLIKE MANNER, AND SHALL ACCURATELY CONFORM TO THE SHAPES AND DIMENSIONS SHOWN ON THE PLAN DETAILS. IF REQUIRED BY THE ENGINEER, THE CONTRACTOR SHALL BE REQUIRED TO SAW CUT THE HMA SURFACE TO CONFORM TO THE SHAPES AND DIMENSIONS SHOWN ON THE PLAN DETAILS. THIS WORK SHALL BE INCLUDED IN THE COST OF THE HMA SURFACE.

3. EXCEPT AS NOTED ON THE PLANS, PAVEMENT GRADES SHOWN ARE AT THE TOP OF PAVEMENT SURFACES.

4. BEFORE ORDERING PIPE CULVERTS OR PIPE DRAINS, THE CONTRACTOR SHALL CONSULT THE ENGINEER FOR EXACT LENGTHS.

5. THE ENGINEER WILL BE THE SOLE JUDGE CONCERNING CURING TIME FOR THE VARIOUS HMA LIFTS.

6. FOR STABILIZATION, ALL TYPE III BARRICADES SHALL REQUIRE A MINIMUM OF FOUR SAND BAGS PER BARRICADE.

7. SEEDING SHALL NOT BE PERMITTED AT ANY TIME WHEN THE GROUND IS FROZEN, WET, OR IN AN UNTILLABLE CONDITION. LOCATIONS TO BE SEEDED WILL BE DETERMINED BY THE ENGINEER.

8. ONLY THOSE TREES DESIGNATED BY THE ENGINEER OR LISTED IN THE TREE REMOVAL SCHEDULE SHALL BE REMOVED. THE CONTRACTOR SHALL PROTECT ALL REMAINING TREES FROM DAMAGE DUE TO HIS OPERATIONS.

9. THE FINISHED EARTHWORK SHALL HAVE A VEGETATION SUSTAINING SOIL COVERING THE TOP FOUR INCHES IN AREAS TO BE SEEDED. THE VEGETATION SUSTAINING SOIL REQUIRED WILL NOT BE PAID FOR SEPARATELY BUT SHALL BE INCLUDED IN THE COST OF FURNISHED EXCAVATION.

10. ALL ELEVATIONS REFERRING TO U.S.G.S. MEAN SEA LEVEL DATUM.

11. ABANDONED UNDERGROUND UTILITIES THAT CONFLICT WITH CONSTRUCTION SHALL BE DISPOSED OF OUTSIDE THE LIMITS OF THE RIGHT OF WAY ACCORDING TO ARTICLE 202.03 OF THE STANDARD SPECIFICATIONS AND AS DIRECTED BY THE ENGINEER. THIS WORK WILL NOT BE PAID FOR SEPARATELY, BUT SHALL BE INCLUDED IN THE COST OF EARTH EXCAVATION.

12. ANY REFERENCE TO A STANDARD IN THESE PLANS SHALL BE INTERPRETED TO MEAN THE EDITION AS INDICATED BY THE SUBNUMBER SHOWN IN THE LIST OF STANDARDS INCLUDED IN THESE PLANS.

ELECTRIC - COMMONWEALTH EDISON COMPANY
GAS - NICOR
SEWER - CITY OF PONTIAC
TELEPHONE - VERIZON
CABLE - MEDIACOM
WATER - CITY OF PONTIAC / ILLINOIS AMERICAN WATER CORPORATION

15. RIPRAP LOCATIONS MAY BE VARIED IN THE FIELD TO SUIT GROUND CONDITIONS AS DIRECTED BY THE ENGINEER.

16. THE FOLLOWING ITEM AND APPROXIMATE QUANTITY IS INCLUDED IN THE "SCHEDULE OF PRICES" IN ORDER TO ESTABLISH A UNIT COST FOR WORK REQUIRED TO MAINTAIN ACCESS TO ENTRANCES AT ALL TIMES. THE ACTUAL QUANTITY OF THE ITEM SHALL BE DETERMINED BY THE ENGINEER IN THE FIELD.

AGGREGATE FOR TEMPORARY ACCESS	100	TON

Bench Mark: BM #1-Chiseled square on top of Northwest wingwall Sta. 24+63.02, 19.09' LT, Elev. 640.84

Existing Structure: S.N. 053-0159 was originally built in 1983 as F.A. Route 681, Section 113BR which replaced S.N. 053-0069 built in 1928. The structure consists of a single span PPC deck beam superstructure on pile supported stub abutments. Riprap was added at the abutments in 2004. Five precast prestressed concrete deck beams were replaced in 2009. The back to back abutment length is 58'-3" while the out-to-out width measures 36'-0". Structure to be removed and replaced.

Traffic Control: One lane of traffic will be maintained by utilizing staged construction.

Salvage: None

Notes:
1. Table assumes the 10 year backwater of the Vermilion River for the downstream boundary condition.
2. For riprap limits not shown, see Roadway Plans.
3. Remnants of existing 1928 abutments may be encountered during excavation, which shall be removed according to Section 501 of the Standard Specifications. If encountered, removal shall be paid for according to Section 109.04 of the Standard Specifications.

GENERAL NOTES

Fasteners shall be ASTM A325 Type 1, mechanically galvanized bolts in painted areas and ASTM A325 Type 3 in unpainted areas. Bolts $^{3}/_{4}$ in. ϕ, holes $^{13}/_{16}$ in. ϕ, unless otherwise noted.

Calculated weight of Structural Steel = AASHTO M 270 Grade 50W = 78,680 pounds

All structural steel shall be AASHTO M 270 Grade 50W.

No field welding is permitted except as specified in the contract documents.

Reinforcement bars designated (E) shall be epoxy coated.

Structural steel shall only be painted for a distance equal to the depth of embedment into the concrete cap plus 3 inches. Painted areas shall be primed in the shop with a Department approved zinc rich primer. Field painting will not be required.

Layout of slope protection system may be varied to suit ground conditions in the field as directed by the Engineer.

The Contractor is advised that the existing PPC deck beams are in a deteriorated condition with reduced load carrying capacity. It is the Contractor's responsibility to account for the condition of the beams when developing construction procedures for the removal and replacement of the structure.

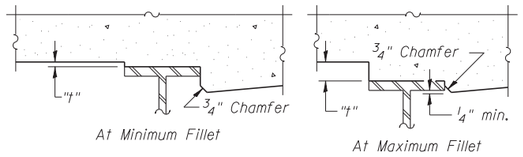
DEAD LOAD DEFLECTION DIAGRAM ①

(Includes weight of concrete only.)



FILLET HEIGHTS ②

Notes:

① The deflections shown are not to be used in the field if the Engineer is working from the "Theoretical Grade Elevations Adjusted for Dead Load Deflection" as shown on sheet 6 of 22.

② To determine "t": After all structural steel has been erected, elevations of the top flanges of the beams shall be taken at intervals shown. These elevations subtracted from the "Theoretical Grade Elevations Adjusted for Dead Load Deflection" shown on sheet 6 of 22, minus slab thickness, equals the fillet heights "t" above top flange of beams.

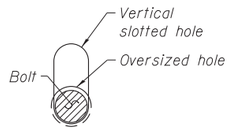
DETAIL A ④⑤



DETAIL B ④⑤

Notes:

① Two hardened washers required for each set of oversized holes.

② Alternate channels C12x30 are permitted to facilitate material acquisition. Calculated weight of structural steel is based on the lighter section. The alternate, if utilized, shall be provided at no additional cost to the Department.

③ $^{3}/_{4}$" ϕ HS bolts. $^{15}/_{16}$" ϕ holes.

④ Use $^{3}/_{4}$" ϕ HS bolts. Provide $^{13}/_{16}$" x $1\,^{7}/_{8}$" vertical slotted holes in connection plates attached to channel diaphragms only. Provide $^{15}/_{16}$" ϕ oversized holes in the beam webs and both legs of the connection angle. Two hardened washers required for each set of oversized holes. Two $^{5}/_{16}$" structural plate washers required for each set of slotted holes.

⑤ The Fabricator shall detail connection plate locations on channel to allow for differential deflection during Stage II deck and parapet pour. Before the deck and parapet concrete is poured, the bolts in the Beam 3 connection shall be positioned at the top of the slotted holes and the bolts in the Beam 4 connection shall be positioned at the bottom of the slotted holes. The bolts shall be finger tight until the Stage II deck and parapet concrete is poured, allowing the Stage II beams to deflect vertically without stressing the D1 diaphragms or Stage I beams. The bolts shall be fully tightened after the Stage II deck and parapet concrete is poured. The diaphragm connection shall be detailed so that the centerline of beam web and centerline of diaphragm channel align in their final position.

⑥ All diaphragms shall be installed as steel is erected and secured with erection pins and bolts except as otherwise noted.

⑦ Load carrying components designated "NTR" shall conform to the Impact Testing Requirement, Zone 2.

GENERAL NOTES

The contractor is advised that the existing PPC deck beams are in a deteriorated condition with reduced load carrying capacity. It is the contractor's responsibility to account for the condition of the beams when developing construction procedures.

If the contractor's procedure for existing beam removal or placement of new beams involves placement of cranes or other heavy equipment on the bridge, a detailed procedure shall be submitted to the Engineer for approval. The procedure shall include calculations, prepared and sealed by an Illinois Licensed Structural Engineer, verifying that the equipment and procedure used will not overstress the new or existing beams. To distribute load to multiple beams and protect the existing surface, in all cases a double layer mat of heavy timbers shall be used at all times under crane tracks or wheels and any outriggers in the down position. If necessary, shims shall be used under the crane mat to ensure uniform contact with the underlying beams. If heavy equipment will be placed on new PPC deck beams, the following shall be done prior to placement of the timber mats: placement and tightening of transverse tie assemblies, grouting and curing the dowel rods 24 hours minimum and grouting and curing the shear keys.

The top surface of the beams shall be finished according to the IDOT Manual for Fabrication of Precast Prestressed Concrete Products.

Plan dimensions and details relative to existing plans are subject to routine variations. The Contractor shall field verify existing dimensions and details affecting new construction and make necessary approved adjustments prior to construction or ordering of materials. Such variations shall not be cause for additional compensation for a change in scope of the work, however, the Contractor will be paid for the quantity actually furnished based upon the unit price bid for the work.

Temporary concrete barrier shall only be anchored into the overlay and not into the PPC deck beams.

Any damage done to the bridge during beam removal shall be repaired by the contractor. Cost to be included in the cost of Removal of Existing PPC Deck Beams

Existing Structure: S.N. 053-0070 was constructed in 1928 as Section 113B, and the superstructure was replaced in 1983 as Section 113BR-1. The superstructure consists of a single span with fourteen precast prestressed concrete deck beams with a 4" bituminous overlay and steel rail on each fascia beam. The substructure consists of closed reinforced concrete abutments and vertical cantilever wingwalls supported on untreated timber piles. The back to back of abutment dimension measures 29'-10 5/8" and the out to out deck dimension measures 42'-0" with no skew. Bridge to be closed and traffic detoured during construction.

No Salvage.

1.) Reinforcement bars designated (E) shall be epoxy coated.
2.) Layout of the slope protection system may be varied to suit ground conditions in the field as directed by the Engineer.
3.) The embankment configuration shown shall be the minimum that must be placed and compacted prior to construction of the abutments.
4.) Seal Coat thickness design is based on the Estimated Water Surface Elevation (EWSE). Cofferdam design details and proposed changes in Seal Coat thickness shall be submitted to the Engineer for approval with the cofferdam design.
5.) The Contractor shall make allowance for the deflection of forms, shrinkage and settlement of falsework, in addition to allowance for dead load deflection. Forms for deck slab shall be removed prior to placement of bridge approach slab.
6.) Excavation behind existing abutment walls shall be performed to balance front and back soil pressure before removing the existing superstructure.
7.) Slipforming of Parapets is not allowed.
8.) The cost of removing the existing bituminous overlay shall be included in the cost of "Removal of Existing Structures".
9.) The Contractor is advised that the existing PPC deck beams are in a deteriorated condition with reduced load carrying capacity. It is the Contractor's responsibility to account for the condition of the beams when developing construction procedures for the removal and replacement of the structure.
