SPLICE PLATE DETAILS

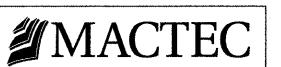

16 Field Splices Required

All Splices  $\textcircled{P}$  shall be M270 Grade 50 Steel.

Load carrying components designated "NTR" shall conform to the Supplemental Requirements for Notch Toughness, Zone 2.

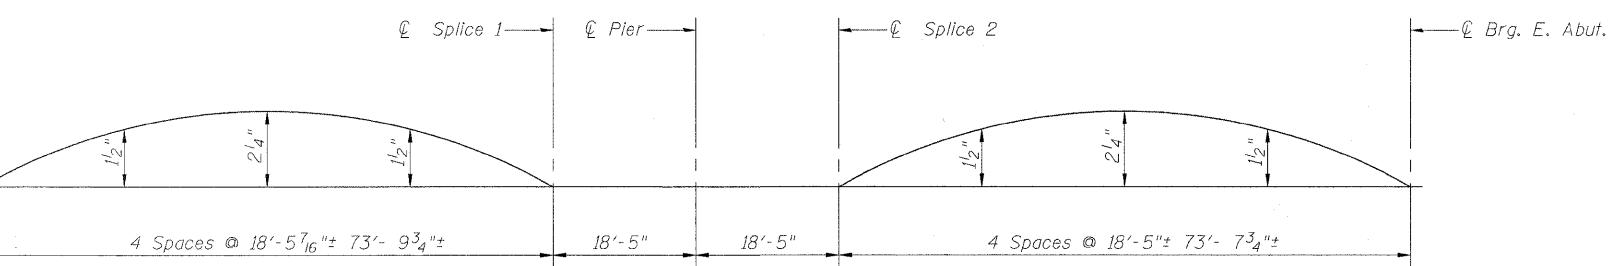

DESIGNED - JPM
CHECKED - CCS
DRAWN - MD
CHECKED - JPM, CCS

- $I_s, S_s$ : Non-composite moment of inertia and section modulus of the steel section used for computing  $f_s$  (Total-Strength I, and Service II) due to non-composite dead loads (in.4 and in.3).  
 $I_c(n), S_c(n)$ : Composite moment of inertia and section modulus of the steel and deck based upon the modular ratio, "n", used for computing  $f_s$  (Total-Strength I, and Service II) due to short-term composite live loads (in.4 and in.3).  
 $I_c(3n), S_c(3n)$ : Composite moment of inertia and section modulus of the steel and deck based upon 3 times the modular ratio, "3n", used for computing  $f_s$  (Total-Strength I, and Service II) due to long-term composite (superimposed) dead loads (in.4 and in.3).  
 $S_{xl}$ : Section modulus about the major axis of section to the controlling flange, tension or compression, taken as yield moment with respect to the controlling flange over the yield strength of the controlling flange (in.3).  
 $DC_1$ : Un-factored non-composite dead load (kips/ft.).  
 $M_{01}$ : Un-factored moment due to non-composite dead load (kip-ft.).  
 $DC_2$ : Un-factored long-term composite (superimposed excluding future wearing surface) dead load (kips/ft.).  
 $M_{02}$ : Un-factored moment due to long-term composite (superimposed excluding future wearing surface) dead load (kip-ft.).  
 $DW$ : Un-factored long-term composite (superimposed future wearing surface only) dead load (kips/ft.).  
 $M_{DW}$ : Un-factored moment due to long-term composite (superimposed future wearing surface only) dead load (kip-ft.).  
 $M_L + Imp$ : Un-factored live load moment plus dynamic load allowance (impact)(kip-ft.).  
 $M_u$  (Strength I): Factored design moment (kip-ft.).  
 $1.25(M_{01} + M_{02}) + 1.5 M_{DW} + 1.75 M_L + Imp$ : Factored lateral bending moment for controlling flange plate (kip-ft.).  
 $f_t$ : Factored calculated normal stress at edge of flange for controlling flange plate due to lateral bending (ksi).  
 $f_s$  (Service II): Sum of stresses as computed from the moments below (ksi).  
 $M_{01} + M_{02} + M_{DW} + 1.3 M_L + Imp$ : Sum of stresses as computed from the moments below on non-compact section (ksi).  
 $1.25(M_{01} + M_{02}) + 1.5 M_{DW} + 1.75 M_L + Imp$ : Critical flange stress at overload computed according to Article 6.10.4.2 (ksi).  
 $F_{cr}$ : Critical flange stress computed according to Article 6.10.7 or 6.10.8 (ksi).  
 $V_f$ : Factored shear range computed according to Article 6.10.10.

Note:  
 $M_L$  and  $R_L$  include the effects of centrifugal force and superelevation.
