

DATA REVIEW MEMORANDUM

DATE: December 29, 2016

TO: Dean Tiebout, Project Manager, E & E, Chicago

FROM: Joanna Christopher, Chemist, E & E, Buffalo

SUBJ: Data Review – IDOT - I-74 - WO 046 (Contract 64C08) – Part 1

REFERENCE:

I. SAMPLE IDENTIFICATION

For the sampling activities for the IDOT - I-74 - WO 046 (Contract 64C08) project, Ecology and Environment, Inc. (E & E) collected the samples listed on Table 1. The samples were analyzed for the methods listed below. Matrix spike/matrix spike duplicates (MS/MSD) were not designated in the field. Samples noted as MS/MSD on Table 1 are provided as batch quality control (QC) MS/MSD. All samples were sent to TestAmerica Laboratory – Chicago, IL for analysis. All other tables are included at the end of this memorandum.

Data were reviewed for field and laboratory precision, accuracy, and completeness in accordance with procedures and quality control (QC) limits. Laboratory data qualifiers for compound identification and quantitation were accepted. Any additional data review qualifiers added are noted below and listed on the tables at the end of this memorandum. Definitions of all data qualifiers are given in the report.

Table 1 Sample Listing

Work Order	Matrix	Sample ID	Lab ID	Sample Date	Lab QC	MS/MSD	ID Corrections
500-120663-1	Solid	1314V3-25-B03 (0-8)	500-120663-1	11/28/2016	MS/MSD		None

II. SAMPLE PROCEDURES

All samples were collected as specified in the work plan and documented on the chain-of-custody (COC). Samples were analyzed as specified on the COC. Samples were packaged, shipped and received as specified in the work plan. All samples must be received cold ($4^{\circ}\pm 2^{\circ}\text{C}$) and in good condition as documented on the Cooler Receipt Forms.

REVIEW RESULTS:

All sample procedures were followed and the sample coolers were received at the appropriate temperature ($4^{\circ}\pm 2^{\circ}\text{C}$) and in good condition as documented on the Cooler Receipt Forms. The case narrative stated that the laboratory received a 16 oz jar for laboratory sample 121121-15 with an ID of 1314V3-01-B05 (8-15)D; however, the chain of custody listed 1314V3-01-B06 (8-15)D; the laboratory logged the sample in per the chain after consulting with the project manager. The case narrative stated that PCB analysis was requested by the project manager for samples 1314V3-21-B02 (0-6), 1314V3-21-B02 (0-6)D, 1314V3-21-B01 (0-5), and 1314V3-21-B01 (5-10), although it had not been listed on the chain of custody. Sample 1314V3-04-G01 was incorrectly listed on the COC as a solid sample; it was logged in correctly as a water sample by the laboratory.

III. LABORATORY DATA

1.0 HOLDING TIMES

Holding times are established and monitored to ensure analytical results accurately represent analyte concentrations in a sample at the time of collection. Exceeding the holding time for a sample generally results in a loss of the analyte due to a variety of mechanisms, such as deposition on the sample container walls or precipitation.

REVIEW RESULTS:

All samples were analyzed within the project-specified holding time.

2.0 BLANKS

Laboratory and field blank samples are analyzed and evaluated to determine the existence and magnitude of possible contamination during the sampling and analysis process. As noted in Table 2 (if applicable), analyte concentrations in the blanks are generally below the

practical quantitation limit (PQL). If the analyte is present in the sample at similar trace levels, then the analyte is likely a common background contaminant from some phase of the sampling, extraction, or analytical procedure and associated low level sample concentrations are not considered to be site related. If the analyte concentration is above the PQL, then there is a potential contamination problem and sample results may be biased high or the data unusable.

REVIEW RESULTS:

Blanks were performed at the required frequency. Generally, for sample results less than five times the blank detection, if the sample result was less than the PQL, the MDL was elevated to the sample result; however, if the sample result was greater than the PQL, then the PQL was elevated to the sample result. If the sample result was a non-detect, no qualification was required.

For Method SW6010B, boron, calcium, chromium, iron, magnesium, manganese, nickel, potassium, and sodium were detected in laboratory method blanks below the PQL; chromium was detected above the PQL in one laboratory method blank. For Method SW6010B_TCLP, boron and zinc were detected in laboratory method blanks below the PQL. For Method SW8260B, 2-hexanone was detected above the PQL in one laboratory method blank. Associated sample results were qualified as shown in Table 2A.

For Method SW6010B, the instrument blank for analytical batch 500-363473 at line 100 contained Iron greater than the reporting limit (RL); associated samples were not reanalyzed because they contained Iron greater than 10 times the amount found in the instrument blank. The data have been reported without qualification.

For Method SW8260B, no compounds were detected in the trip blank, sample 1314V3-00-TB01.

3.0 SURROGATE SPIKE RECOVERY

Laboratory performance for individual samples analyzed for organic compounds is established by means of surrogate spiking activities. Samples are spiked with surrogate compounds prior to preparation and analysis. Unusually low or high surrogate recovery values may indicate some deficiency in the analytical system or that some matrix effects exist, resulting in low or high sample results for target compounds. Sample surrogate recoveries outside QC limits (if applicable) are presented in Table 3. No qualification was made to MS/MSD results for samples with surrogate recoveries outside QC limits.

REVIEW RESULTS:

Surrogate spikes were appropriately added to all field and QC samples. The following surrogate failures were noted for semi-volatile analysis by SW8270D: Samples 1314V3-08-B01 (0-6) (MS), 1314V3-25-B02 (6-12), and 1314V3-25-B06 (0-6) (DL) each had one acid and/or base/neutral surrogate outside of control limits. No qualification of the data was made.

4.0 MATRIX SPIKE AND MATRIX SPIKE DUPLICATE ANALYSIS

The matrix spike and matrix spike duplicate (MS/MSD) analyses are intended to provide information about the effects that the sample matrix exerts on the digestion/extraction and measurement methodology. MS recovery values that do not meet laboratory QC criteria may indicate that sample analyte results are being attenuated in the analysis procedure. These results are presented in Table 4 (if applicable). The potential sample bias may be estimated by noting the degree to which the MS concentration was elevated or lowered in the spike analysis. However, this bias should serve only as approximations; sample-specific problems may be the cause of the discrepancy, particularly in soil samples. Recoveries of a post-digestion spike or a laboratory control sample (LCS) are used to verify that the analytical methodology is acceptable and that MS recoveries are due to matrix effects. An MSD analysis is performed to evaluate the precision of the sample results. Precision is measured as the relative percent difference (RPD) between analytical results for duplicate samples. The laboratory's failure to produce similar results for MSD samples may indicate that the samples were non-homogeneous (particularly in soil samples), or that method defects may exist in the laboratory's techniques.

REVIEW RESULTS:

The MS/MSD sample analyses were performed at the required frequency. The recovery and RPD results for MS/MSDs for project samples were within QC criteria established except as noted on Table 4 (batch MS/MSDs performed for other clients' samples were not included in the table).

If the spiking recovery was high and the analyte was not detected in the sample, no qualification of the data was made; however, if there was a positive detection in the parent sample, then the result was J qualified as estimated.

If the spiking recovery was low and the analyte was not detected in the parent, then the parent result was UJ qualified. If the analyte was detected in the parent sample, then the result was J qualified as estimated.

For laboratory replicate analyses that failed precision, the results in the parent sample were qualified J as estimated if the RPD did not meet the laboratory limit. No qualification was made on the analytes that exhibited poor precision with sample results that were less than 5X the PQL.

The MS and /or MSDs for several metals for Methods SW6010B and several semivolatile compounds for Method 8270D exhibited failing recoveries. 2,4-dinitrophenol, 4,6-dinitro-2-methylphenol, hexachlorocyclopentadiene, and pentachlorophenol exhibited 0% recovery in some of the MS/MSDs; however, these analytes are poor performing compounds in a multi-parameter spike and the associated sample results were qualified with UJ as estimated unless they were rejected for LCS failure and qualified with UR as rejected non-detect as noted in Section 5 (2,4-dinitrophenol). [Note: The two LCS failures for 2,4-dinitrophenol were for batches that were not associated with the MS/MSD samples.]

5.0 LABORATORY CONTROL SAMPLE ANALYSIS

The LCS is analyzed to monitor the efficiency of the digestion/extraction procedure and analytical instrument operation. The ability of the laboratory to successfully analyze an LCS demonstrates that there are no analytical problems related to the digestion/sample preparation procedures and/or instrument operations. The LCS results outside QC limits are presented in Table 5 (if applicable). Sporadic and marginal QC failures for multiple component methods do not indicate an analytical concern. If recoveries are high and the compounds are not detected in the samples, then no data qualification is required. All recoveries should be above 10% or the non-detect results flagged "UR" as rejected.

REVIEW RESULTS:

All LCS analyses were within control limits and performed at the required frequency except as noted on Table 5. 2,4-Nitrophenol recovered below control limits (0% recovery) for LCS 500-363273/2-A and LCS 500-363857/2-A by Method SW8270D; associated sample results were non-detect and were qualified with UR as rejected non-detect. Carbazole recovered above control limits (139% recovery) for LCS 500-363857/2-A by Method SW8270D; associated sample results were non-detect and were reported without qualification.

6.0 COMPOUND IDENTIFICATION AND QUANTITATION

Compound identities are assigned by comparing sample compound retention times to retention times from known (standard) compounds and identification of an acceptable mass spectrum. Compounds detected below PQLs in samples should be considered estimated and are qualified "J." The samples with compounds above the linear range were all re-analyzed at a higher dilution factor.

REVIEW RESULTS:

All compound identification and quantitation criteria were achieved as could be determined from the EDD. Samples were diluted to bring the target concentration within the calibration range or due to matrix effects as shown on Table 6. Generally, there was no impact to data usability. In some cases, elevated reporting limits were provided, which may be above regulatory limits.

For Method SW6020A, the continuing calibration verification (CCV) associated with batch 500-365046 recovered above the upper control limit for thallium as described in the case narrative; however, the low level CCV bracketing the sample concentrations recovered within control limits. Associated sample results were non-detects and were reported without qualification.

For Method SW6020A, as described in the case narrative, the internal standard (Tb) was used to report the element Thallium in batch 500-364154 due to the LCS being spiked with the trace digestion spike which contains Bismuth. Associated sample results were non-detects and were reported without qualification.

For Method SW8082A, as described in the case narrative, the following samples required a mercury clean-up via EPA Method 3660A to reduce matrix interferences caused by sulfur: 1314V3-21-B02 (0-6) (500-120748-3), 1314V3-21-B02 (0-6)D (500-120748-4) and 1314V3-21-B01 (0-5) (500-120748-5). The sample results were reported without qualification.

7.0 FIELD DUPLICATE SAMPLE RESULTS

Field duplicate samples were collected and analyzed as an indication of overall precision for both field and laboratory. Field duplicate results are summarized in Table 7 (if applicable). The results are expected to have more variability than laboratory duplicates, which measure only laboratory precision. It is expected also that soil field duplicates will exhibit greater variance than water field duplicates due to the difficulties associated with collecting identical field samples. The QC criteria used to assess field duplicate samples for this project was limits

of 70% RPD for soils and 40% RPD for waters, or twice the general laboratory duplicate criteria. If both compounds were below the laboratory PQL or one of the compounds was present as a non-detect, then the compounds are generally not qualified due to field duplicate precision. There are no guidelines regarding data qualification based on poor field duplicate precision. Professional judgment was used to determine whether or not to qualify results.

REVIEW RESULTS:

One field duplicate was collected per 17 soil samples. The RPD ratings are listed on Table 7 and were generally "Good". For the field duplicate sample pair for sample 1314V3-21-B02 (0-6), the result for lead by Method SW6010B_TCLP was qualified with J as estimated due to poor precision.

Table 2 - List of Positive Results for Blank Samples

I. SAMPLE IDENTIFICATION

For the sampling activities for the IDOT - I-74 - WO 046 (Contract 64C08) project, Ecology and Environment, Inc. (E & E) collected the samples listed on Table 1. The samples were analyzed for the methods listed below. Matrix spike/matrix spike duplicates (MS/MSD) were not designated in the field. Samples noted as MS/MSD on Table 1 are provided as batch quality control (QC) MS/MSD. All samples were sent to TestAmerica Laboratory – Chicago, IL for analysis. All other tables are included at the end of this memorandum.

Data were reviewed for field and laboratory precision, accuracy, and completeness in accordance with procedures and quality control (QC) limits. Laboratory data qualifiers for compound identification and quantitation were accepted. Any additional data review qualifiers added are noted below and listed on the tables at the end of this memorandum. Definitions of all data qualifiers are given in the report.

Table 1 Sample Listing

II. SAMPLE PROCEDURES

All samples were collected as specified in the work plan and documented on the chain-of-custody (COC). Samples were analyzed as specified on the COC. Samples were packaged, shipped and received as specified in the work plan. All samples must be received cold (4° +/- 2°C) and in good condition as documented on the Cooler Receipt Forms.

REVIEW RESULTS:

All sample procedures were followed and the sample coolers were received at the appropriate temperature ($4^{\circ}\pm 2^{\circ}\text{C}$) and in good condition as documented on the Cooler Receipt Forms. Sample bottles for laboratory samples 121504-5 and -6 with an ID prefix of 1314V3-24-B12 [1314V3-24-B12 (0-6) and 1314V3-24-B12 (6-12)] were received; however, the chain of custody listed the ID prefix as 1314V3-24-B14. Samples were logged in per sample bottle labels.

III. LABORATORY DATA

1.0 HOLDING TIMES

Holding times are established and monitored to ensure analytical results accurately represent analyte concentrations in a sample at the time of collection. Exceeding the holding time for a sample generally results in a loss of the analyte due to a variety of mechanisms, such as deposition on the sample container walls or precipitation.

REVIEW RESULTS:

All samples were analyzed within the project-specified holding time.

2.0 BLANKS

Laboratory and field blank samples are analyzed and evaluated to determine the existence and magnitude of possible contamination during the sampling and analysis process. As noted in Table 2 (if applicable), analyte concentrations in the blanks are generally below the practical quantitation limit (PQL). If the analyte is present in the sample at similar trace levels, then the analyte is likely a common background contaminant from some phase of the sampling, extraction, or analytical procedure and associated low level sample concentrations are not considered to be site related. If the analyte concentration is above the PQL, then there is a potential contamination problem and sample results may be biased high or the data unusable.

REVIEW RESULTS:

Blanks were performed at the required frequency. Generally, for sample results less than five times the blank detection, if the sample result was less than the PQL, the MDL was elevated to the sample result; however, if the sample result was greater than the PQL, then the PQL was elevated to the sample result. If the sample result was a non-detect, no qualification was required.

For Method SW6010B, cadmium, calcium, chromium, iron, magnesium, manganese, selenium, and sodium were detected in laboratory method blanks below the PQL. For Method SW6010B_TCLP, boron and zinc were detected in laboratory method blanks below the PQL; lead was detected in laboratory method blanks above the PQL. For Method SW6020A, zinc was detected in one laboratory method blank below the PQL and iron was detected above the PQL. For Method SW7471B, mercury was detected in one method blank below the PQL. For Method SW870D, 2-methylnaphthalene was detected below the PQL and naphthalene was detected above the PQL in one laboratory method blank. Associated sample results were qualified as shown in Table 2A.

For Method SW8260B, as described in the case narrative, the method blank for batch 365228 was non-detect for all target analytes; however, for one sample associated with this method blank (1314V3-07-G01) acetone was detected just above the reporting limit. Acetone is a known lab contaminant; therefore, all low level detects for this compound should be considered lab contamination. The result has been qualified with U as non-detect.

For Method SW6020A, as described in the case narrative, the continuing calibration blanks (CCB) associated with batch 500-364837, at lines 155 and 159, results were above the reporting limit (RL) for thallium. The associated sample results were below the RL and were reported without qualification.

For Method SW8260B, no compounds were detected in the trip blanks, samples 1314V3-00-TB02 and 1314V3-00-TB03 .

3.0 SURROGATE SPIKE RECOVERY

Laboratory performance for individual samples analyzed for organic compounds is established by means of surrogate spiking activities. Samples are spiked with surrogate compounds prior to preparation and analysis. Unusually low or high surrogate recovery values may indicate some deficiency in the analytical system or that some matrix effects exist, resulting in low or high sample results for target compounds. Sample surrogate recoveries outside QC limits (if applicable) are presented in Table 3. No qualification was made to MS/MSD results for samples with surrogate recoveries outside QC limits.

REVIEW RESULTS:

Surrogate spikes were appropriately added to all field and QC samples. The following surrogate failures were noted for semi-volatile analysis by SW8270D: Samples 1314V3-06-B09 (0-2) (5X dilution), 1314V3-18-B02 (0-7) (MS/MSD), 1314V3-24-B02 (0-5), 1314V3-24-B09 (0-4)

(MS/MSD), 1314V3-24-B09 (0-4), 1314V3-33-B02 (0-5) (MS/MSD), 1314V3-33-B03 (0-6), and 1314V3-33-B04 (0-6) each had one acid and/or base/neutral surrogate outside of control limits. No qualification of the data was made.

The following surrogate failures were noted for volatile analysis by SW8260B: Samples 1314V3-06-B01 (0-8), 1314V3-06-B06 (0-4), 1314V3-06-B09 (0-2), 1314V3-17-B01 (0-7), 1314V3-18-B09 (0-8), 1314V3-24-B05 (0-5), 1314V3-24-B07 (0-5), 1314V3-24-B12 (0-6), and 1314V3-24-B13 (0-6) each had one or two surrogates above control limits. Associated sample results were non-detects and no qualification of the data was made except for sample 1314V3-B13 (0-6) the results for tetrachloroethene and xylenes, total were qualified with J as estimated. Samples 1314V3-60-B03 (4-9), 1314V3-60-B06 (0-6), and 1314V3-60-B06 (0-6) (MS/MSD) each had one acid and/or base/neutral surrogate outside of control limits. No qualification of the data was made.

4.0 MATRIX SPIKE AND MATRIX SPIKE DUPLICATE ANALYSIS

The matrix spike and matrix spike duplicate (MS/MSD) analyses are intended to provide information about the effects that the sample matrix exerts on the digestion/extraction and measurement methodology. MS recovery values that do not meet laboratory QC criteria may indicate that sample analyte results are being attenuated in the analysis procedure. These results are presented in Table 4 (if applicable). The potential sample bias may be estimated by noting the degree to which the MS concentration was elevated or lowered in the spike analysis. However, this bias should serve only as approximations; sample-specific problems may be the cause of the discrepancy, particularly in soil samples. Recoveries of a post-digestion spike or a laboratory control sample (LCS) are used to verify that the analytical methodology is acceptable and that MS recoveries are due to matrix effects. An MSD analysis is performed to evaluate the precision of the sample results. Precision is measured as the relative percent difference (RPD) between analytical results for duplicate samples. The laboratory's failure to produce similar results for MSD samples may indicate that the samples were non-homogeneous (particularly in soil samples), or that method defects may exist in the laboratory's techniques.

REVIEW RESULTS:

The MS/MSD sample analyses were performed at the required frequency. The recovery and RPD results for MS/MSDs for project samples were within QC criteria established except as noted on Table 4 (batch MS/MSDs performed for other clients' samples were not included in the table).

If the spiking recovery was high and the analyte was not detected in the sample, no qualification of the data was made; however, if there was a positive detection in the parent sample, then the result was J qualified as estimated.

If the spiking recovery was low and the analyte was not detected in the parent, then the parent result was UJ qualified. If the analyte was detected in the parent sample, then the result was J qualified as estimated.

For laboratory replicate analyses that failed precision, the results in the parent sample were qualified J as estimated if the RPD did not meet the laboratory limit. No qualification was made on the analytes that exhibited poor precision with sample results that were less than 5X the PQL.

The MS and /or MSDs for several metals for Methods SW6010B and several semivolatile compounds for Method 8270D exhibited failing recoveries. 2,4-dinitrophenol, 4,6-dinitro-2-methylphenol, hexachlorocyclopentadiene, and pentachlorophenol exhibited 0% recovery in some of the MS/MSDs; however, these analytes are poor performing compounds in a multi-parameter spike and the associated sample results were qualified with UJ as estimated unless they were rejected for LCS failure and qualified with UR as rejected non-detect as noted in Section 5 (2,4-dinitrophenol). [Note: Most of the LCS failures were not associated with the MS/MSD samples.]

5.0 LABORATORY CONTROL SAMPLE ANALYSIS

The LCS is analyzed to monitor the efficiency of the digestion/extraction procedure and analytical instrument operation. The ability of the laboratory to successfully analyze an LCS demonstrates that there are no analytical problems related to the digestion/sample preparation procedures and/or instrument operations. The LCS results outside QC limits are presented in Table 5 (if applicable). Sporadic and marginal QC failures for multiple component methods do not indicate an analytical concern. If recoveries are high and the compounds are not detected in the samples, then no data qualification is required. All recoveries should be above 10% or the non-detect results flagged "UR" as rejected.

REVIEW RESULTS:

All LCS analyses were within control limits and performed at the required frequency except as noted on Table 5. 2,4-Dinitrophenol recovered below control limits (0% recovery) for LCS 500-365830/2-A, LCS 500-366006/2-A, and LCS 500-366823/2-A by Method SW8270D; associated sample results were non-detect and were qualified with UR as rejected non-detect. LCS 500-364764/2-A recovered below control limits for 3,3'-dichlorobenzidine by Method SW8270D; associated sample results were non-detect and were qualified with UJ as estimated non-detect. Carbazole and 4-nitroaniline recovered above control limits for LCS 500-366823/2-A by Method SW8270D; associated sample results were non-detect and were reported without qualification. 4-Nitroaniline recovered above control limits for LCS 500-365567/2-A by Method SW8270D; associated detected sample result was qualified with J as estimated and associated non-detect sample results were reported without qualification. Precision for LCSD 500-364761/3-A by Method SW8270D was outside control limits for 2,4-dimethylphenol, 3,3'-Dichlorobenzidine, and N-nitrosodiphenylamine; associated sample results were non-detects and were reported without qualification.

For Method SW6010B, the interference check standard solution (ICSA) associated with batch 500-366456 had results for cadmium above the control limit. The laboratory blank (MB), laboratory control sample (LCS), and all other QC results were within control limits. The associated samples had results below the reporting limit for cadmium, therefore the data have been reported without qualification.

For Method SW6020A, as described in the case narrative, the low level continuing calibration verification (CCVL) associated with batch 500-364837, at line 160, recovered above the upper control limit for thallium. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported without qualification.

For Method SW6020A, as described in the case narrative, the low level check standard (CCVL) recovery associated with batch 500-365454, at line 37, recovered above the upper control limit for Beryllium. The samples associated with this CCVL were below the RL for the affected analyte; therefore, the data have been reported without qualification.

6.0 COMPOUND IDENTIFICATION AND QUANTITATION

Compound identities are assigned by comparing sample compound retention times to retention times from known (standard) compounds and identification of an acceptable mass spectrum. Compounds detected below PQLs in samples should be considered estimated and are qualified "J." The samples with compounds above the linear range were all re-analyzed at a higher dilution factor.

REVIEW RESULTS:

All compound identification and quantitation criteria were achieved as could be determined from the EDD. Samples were diluted to bring the target concentration within the calibration range or due to matrix effects as shown on Table 6. Generally, there was no impact to data usability. In some cases, elevated reporting limits were provided, which may be above regulatory limits.

For Method SW6020A, as described in the case narrative, the internal standard (Tb) was used to report the element Thallium in batch 500-364634 due to the LCS being spiked with the trace digestion spike which contains Bismuth. Associated sample results were non-detects and were reported without qualification.

For Method SW8082A, as described in the case narrative, the following sample required a mercury clean-up via EPA Method 3660A to reduce matrix interferences caused by sulfur: 1314V3-06-B01 (0-8). The sample result was reported without qualification.

For Method SW8260B, the Internal standard (ISTD) responses for sample 1314V3-06-B01 (0-8) were below acceptance limits. As described in an email from the laboratory, the sample was analyzed initially with all internal standards below QC limits. The sample was re-analyzed using the second frozen water preserved vial, again with all internal standards below QC limits. The sodium bisulfate preserved sample was analyzed next with 1 internal standard recovery below QC limits, and 2 surrogate recoveries outside QC limits. The sodium bisulfate data was reported versus high level methanol analysis in order to provide a lower reporting limit. As described in the case narrative, compounds associated with these internal standards have been flagged with a "*" in the data package. The best data were reported and the associated result (1,1,2,2-tetrachloroethane) has been qualified with UJ as estimated non-detect.

For Method SW8260B, as described in the case narrative, internal standard responses were outside of acceptance limits for samples 1314V3-24-B12 (0-6) and 1314V3-24-B13 (0-6). Compounds associated with these internal standards (1,1,2,2-tetrachloroethane and carbon tetrachloride) have been flagged with a "*" in the data package. Re-analysis was performed with

Internal standard responses and surrogate recoveries having concurring results. The best data were reported and qualified with UJ as estimated non-detect.

For Method SW8270D, as described in the case narrative, the perylene-d12 Internal standard (ISTD) response for sample 1314V3-60-B04 (0-5) was below acceptance limits. The sample was run a second time with concurring results. Results with the highest ISTD recovery have been reported and associated compounds (benzo[a]pyrene, benzo[b]fluoranthene, benzo[g,h,i]perylene, benzo[k]fluoranthene, dibenz(a,h)anthracene, di-n-octyl phthalate, and indeno[1,2,3-cd]pyrene) have been qualified with J for detected compounds and UJ for non-detects.

7.0 FIELD DUPLICATE SAMPLE RESULTS

Field duplicate samples were collected and analyzed as an indication of overall precision for both field and laboratory. Field duplicate results are summarized in Table 7 (if applicable). The results are expected to have more variability than laboratory duplicates, which measure only laboratory precision. It is expected also that soil field duplicates will exhibit greater variance than water field duplicates due to the difficulties associated with collecting identical field samples. The QC criteria used to assess field duplicate samples for this project was limits of 70% RPD for soils and 40% RPD for waters, or twice the general laboratory duplicate criteria. If both compounds were below the laboratory PQL or one of the compounds was present as a non-detect, then the compounds are generally not qualified due to field duplicate precision. There are no guidelines regarding data qualification based on poor field duplicate precision. Professional judgment was used to determine whether or not to qualify results.

REVIEW RESULTS:

One field duplicate was collected per 16 soil samples. The RPD ratings are listed on Table 7 and were generally "Good". For the field duplicate sample pair for sample 1314V3-11-B03 (0-1) the result for benzo[k]fluoranthene by Method SW8270D was qualified with J as estimated due to poor precision. For the field duplicate sample pair for sample 1314V3-24-B04 (5-10) the results for cobalt and manganese by Method SW6010B were qualified with J as estimated due to poor precision. For the field duplicate sample pair for sample 1314V3-33-B07 (0-8) the result for calcium by Method SW6010B was qualified with J as estimated due to poor precision.

Table 2 - List of Positive Results for Blank Samples

Method	Sample ID	Samp Type	Analyte	Result	Qual	Anal Type	Units	MDL	PQL

The test results in this report meet all 2003 NELAC and 2009 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Narrative

Job Narrative 500-120663-1

Comments

No additional comments.

Receipt

The samples were received on 11/29/2016 9:25 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 3.5° C.

GC/MS VOA

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

GC/MS Semi VOA

Method(s) 8270D: The following samples contained one acid surrogate outside acceptance limits: 1314V3-25-B01 (0-6) (500-120663-8) and 1314V3-25-B02 (6-12) (500-120663-11). The laboratory's SOP allows one acid and one base surrogate to be outside acceptance limits; therefore, re-extraction was not performed. These results have been reported and qualified.

Method(s) 8270D: The following matrix spike/matrix spike duplicate (MS/MSD) recovered at 0% for one or more analytes. Data has been qualified and reported. (500-120663-E-1-J MS) and (500-120663-E-1-K MSD)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals

Method(s) 6010B: The following samples was diluted due to the nature of the sample matrix: 1314V3-25-B06 (0-6) (500-120663-4), 1314V3-25-B01 (0-6) (500-120663-8) and 1314V3-25-B05 (0-6) (500-120663-12). Elevated reporting limits (RLs) are provided.

Method(s) 6010B: The method blank for preparation batch 500-362833 and analytical batch 500-363271 contained Chromium above the reporting limit (RL). Associated samples 1314V3-25-B06 (0-6) (500-120663-4), 1314V3-25-B01 (0-6) (500-120663-8), 1314V3-25-B01 (6-12) (500-120663-9) and 1314V3-25-B05 (0-6) (500-120663-12) were not re-extracted and/or re-analyzed because results were greater than 10X the value found in the method blank.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Organic Prep

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Qualifiers

GC/MS Semi VOA

Qualifier	Qualifier Description
F1	MS and/or MSD Recovery is outside acceptance limits.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
F2	MS/MSD RPD exceeds control limits
X	Surrogate is outside control limits

Metals

Qualifier	Qualifier Description
F1	MS and/or MSD Recovery is outside acceptance limits.
B	Compound was found in the blank and sample.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
F2	MS/MSD RPD exceeds control limits
F3	Duplicate RPD exceeds the control limit
F5	Duplicate RPD exceeds limit, and one or both sample results are less than 5 times RL. The data are considered valid because the absolute difference is less than the RL.
4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
α	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Login Sample Receipt Checklist

Client: Ecology and Environment, Inc.

Job Number: 500-120663-1

Login Number: 120663

List Source: TestAmerica Chicago

List Number: 1

Creator: Scott, Sherri L

Question	Answer	Comment
Radioactivity wasn't checked or is \leq background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	3.5
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	False	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <math><6\text{mm}</math> (1/4").	N/A	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

The test results in this report meet all 2003 NELAC and 2009 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Narrative

Job Narrative 500-120748-1

Comments

No additional comments.

Receipt

The samples were received on 11/30/2016 10:20 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 2 coolers at receipt time were 3.0° C and 3.9° C.

Receipt Exceptions

PCBs were added to lab samples 3-6 per communication with E&E 12/5.

GC/MS VOA

Method(s) 8260B: Surrogate recovery for the following sample was outside the upper control limit: 1314V3-74-B01 (0-2) (500-120748-1). This sample did not contain any target analytes; therefore, re-analysis was not performed.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC/MS Semi VOA

Method(s) 8270D: Due to the large number of spiked analytes, there is a high probability that one or more analytes will recover outside acceptance limits. The laboratory's SOP allows for 3 analytes to recover outside criteria for this method when utilizing this list of analytes. The LCS associated with batch 363857 had 1 analyte outside control limits: Carbazole. These results have been reported and qualified. (LCS 500-363857/2-A)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC Semi VOA

Method(s) 8082A: The following samples required a mercury clean-up, via EPA Method 3660A, to reduce matrix interferences caused by sulfur: 1314V3-21-B02 (0-6) (500-120748-3), 1314V3-21-B02 (0-6)D (500-120748-4) and 1314V3-21-B01 (0-5) (500-120748-5). The reagent lot number used was: 153166.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals

Method(s) 6010B: The instrument blank for analytical batch 500-363473 at line 100 contained Iron greater than the reporting limit (RL); associated samples were not reanalyzed because they contained Iron greater than 10 times the amount found in the instrument blank. The data have been qualified and reported.

Method(s) 6010B: The following samples was diluted due to the nature of the sample matrix: 1314V3-21-B02 (0-6) (500-120748-3), 1314V3-21-B02 (0-6)D (500-120748-4) and 1314V3-21-B01 (0-5) (500-120748-5). Elevated reporting limits (RLs) are provided.

Method(s) 6010B: The following samples was diluted due to the nature of the sample matrix: 1314V3-21-B02 (0-6) (500-120748-3), 1314V3-21-B02 (0-6)D (500-120748-4) and 1314V3-21-B01 (0-5) (500-120748-5). Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Organic Prep

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
X	Surrogate is outside control limits

GC/MS Semi VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
*	LCS or LCSD is outside acceptance limits.

GC Semi VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Metals

Qualifier	Qualifier Description
F1	MS and/or MSD Recovery is outside acceptance limits.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
B	Compound was found in the blank and sample.
^	ICV,CCV,ICB,CCB, ISA, ISB, CRI, CRA, DLCK or MRL standard: Instrument related QC is outside acceptance limits.
F5	Duplicate RPD exceeds limit, and one or both sample results are less than 5 times RL. The data are considered valid because the absolute difference is less than the RL.
4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
α	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

The test results in this report meet all 2003 NELAC and 2009 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Comments

No additional comments.

Receipt

The samples were received on 12/2/2016 10:10 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 2 coolers at receipt time were 2.6° C and 3.3° C.

GC/MS VOA

Method(s) 8260B: The method blank for preparation batch 363745 contained 2-Hexanone above the reporting limit (RL). None of the samples associated with this method blank contained the target compound; therefore, re-analysis of samples were not performed.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC/MS Semi VOA

Method(s) 8270D: The following matrix spike/matrix spike duplicate (MS/MSD) recovered at 0% for one or more analytes. Data has been qualified and reported. (500-120882-E-2-I MS) and (500-120882-E-2-J MSD)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals

Method(s) 6020A: The internal standard (Tb) was used to report the element Thallium in batch 500-364154. This was due to the LCS being spiked with the trace digestion spike which contains Bismuth.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Organic Prep

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Qualifiers

GC/MS Semi VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
F1	MS and/or MSD Recovery is outside acceptance limits.

Metals

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
B	Compound was found in the blank and sample.
F1	MS and/or MSD Recovery is outside acceptance limits.
F2	MS/MSD RPD exceeds control limits
F5	Duplicate RPD exceeds limit, and one or both sample results are less than 5 times RL. The data are considered valid because the absolute difference is less than the RL.
F3	Duplicate RPD exceeds the control limit
4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
α	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Certification Summary

Client: Ecology and Environment, Inc.
Project/Site: IDOT - I-74 - WO 046

TestAmerica Job ID: 500-120882-1

Laboratory: TestAmerica Chicago

Unless otherwise noted, all analytes for this laboratory were covered under each certification below.

Authority	Program	EPA Region	Certification ID	Expiration Date
Illinois	NELAP	5	100201	04-30-17

The following analytes are included in this report, but certification is not offered by the governing authority:

Analysis Method	Prep Method	Matrix	Analyte
6020A	3010A	Solid	Antimony
6020A	3010A	Solid	Thallium
8260B	5035	Solid	1,3-Dichloropropene, Total
Moisture		Solid	Percent Moisture
Moisture		Solid	Percent Solids

List Source: TestAmerica Chicago

List Number: 1

Creator: Scott, Sherri L

Question	Answer	Comment
Radioactivity wasn't checked or is \leq background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	2.6.3.3
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <math><6\text{mm}</math> (1/4").	N/A	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

The test results in this report meet all 2003 NELAC and 2009 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Narrative

Job Narrative 500-121005-1

Comments

No additional comments.

Receipt

The samples were received on 12/6/2016 10:30 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 2 coolers at receipt time were 1.2° C and 4.1° C.

GC/MS VOA

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

GC/MS Semi VOA

Method(s) 8270D: Perylene-d12 Internal standard (ISTD) response for the following samples was outside of acceptance limits. The sample was run a second time with concurring results. Results with the highest ISTD recovery have been reported 1314V3-60-B04 (0-5) (500-121005-7).

Method(s) 8270D: The following samples contained one acid surrogate outside acceptance limits: 1314V3-60-B06 (0-6) (500-121005-3), 1314V3-60-B03 (4-9) (500-121005-9), (500-121005-E-3-I MS) and (500-121005-E-3-J MSD). The laboratory's SOP allows one acid and one base surrogate to be outside acceptance limits; therefore, re-extraction was not performed. These results have been reported and qualified.

Method(s) 8270D: The following matrix spike/matrix spike duplicate (MS/MSD) recovered at 0% for one or more analytes. Data has been qualified and reported. (500-121005-E-3-I MS) and (500-121005-E-3-J MSD)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals

Method(s) 6020A: The internal standard Terbium(Tb) was used to report the element Thallium (Tl), in batch 364634, because the icp digestion spike was used for the prep of the samples. The icp digestion spike contains the element Bismuth (Bi) in the spike.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Organic Prep

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Qualifiers

GC/MS Semi VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
F1	MS and/or MSD Recovery is outside acceptance limits.
X	Surrogate is outside control limits
F2	MS/MSD RPD exceeds control limits
E	Result exceeded calibration range.

Metals

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
B	Compound was found in the blank and sample.
F1	MS and/or MSD Recovery is outside acceptance limits.
F2	MS/MSD RPD exceeds control limits
F5	Duplicate RPD exceeds limit, and one or both sample results are less than 5 times RL. The data are considered valid because the absolute difference is less than the RL.
4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
α	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Certification Summary

Client: Ecology and Environment, Inc.
Project/Site: IDOT - I-74 - WO 046

TestAmerica Job ID: 500-121005-1

Laboratory: TestAmerica Chicago

Unless otherwise noted, all analytes for this laboratory were covered under each certification below.

Authority	Program	EPA Region	Certification ID	Expiration Date
Illinois	NELAP	5	100201	04-30-17

The following analytes are included in this report, but certification is not offered by the governing authority:

Analysis Method	Prep Method	Matrix	Analyte
6020A	3010A	Solid	Antimony
6020A	3010A	Solid	Thallium
8260B	5035	Solid	1,3-Dichloropropene, Total
Moisture		Solid	Percent Moisture
Moisture		Solid	Percent Solids

Job Number: 500-121005-1

Login Number: 121005

List Source: TestAmerica Chicago

List Number: 1

Creator: Scott, Sherri L

Question	Answer	Comment
Radioactivity wasn't checked or is \leq background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	4.1,1.2
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <math><6\text{mm}</math> (1/4").	N/A	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

The test results in this report meet all 2003 NELAC and 2009 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Comments

No additional comments.

Receipt

The samples were received on 12/7/2016 1:30 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 2 coolers at receipt time were 3.3° C and 4.5° C.

Received 16oz jar for laboratory sample -15 with an ID of 1314V3-01-B05 (8-15)D, Chain of custody has 1314V3-01-B06 (8-15)D. Logged in per chain.

GC/MS VOA

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

GC/MS Semi VOA

Method(s) 8270D: The following sample contained one acid surrogate outside acceptance limits: (500-121121-E-1-S MS). The laboratory's SOP allows one acid and one base surrogate to be outside acceptance limits; therefore, re-extraction was not performed. These results have been reported and qualified.

Method(s) 8270D: The following matrix spike/matrix spike duplicate (MS/MSD) recovered at 0% for one or more analytes. Data has been qualified and reported. (500-121121-E-1-S MS) and (500-121121-E-1-T MSD)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals

Method(s) 6020A: The continuing calibration verifications (CCV), at lines 49, 61 and 72, associated with batch 500-365046 recovered above the upper control limit for Thallium. Also, the low level CCV bracketing these samples were all within control limits. The samples associated with these CCV were non-detects for the affected analyte; therefore, the data have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Organic Prep

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Qualifiers

GC/MS Semi VOA

Qualifier	Qualifier Description
F2	MS/MSD RPD exceeds control limits
F1	MS and/or MSD Recovery is outside acceptance limits.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
X	Surrogate is outside control limits

Metals

Qualifier	Qualifier Description
F1	MS and/or MSD Recovery is outside acceptance limits.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
B	Compound was found in the blank and sample.
F2	MS/MSD RPD exceeds control limits
^	ICV,CCV,ICB,CCB, ISA, ISB, CRI, CRA, DLCK or MRL standard: Instrument related QC is outside acceptance limits.
F5	Duplicate RPD exceeds limit, and one or both sample results are less than 5 times RL. The data are considered valid because the absolute difference is less than the RL.
F3	Duplicate RPD exceeds the control limit
4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
α	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Certification Summary

Client: Ecology and Environment, Inc.
Project/Site: IDOT - I-74 - WO 046

TestAmerica Job ID: 500-121121-1

Laboratory: TestAmerica Chicago

Unless otherwise noted, all analytes for this laboratory were covered under each certification below.

Authority	Program	EPA Region	Certification ID	Expiration Date
Illinois	NELAP	5	100201	04-30-17

The following analytes are included in this report, but certification is not offered by the governing authority:

Analysis Method	Prep Method	Matrix	Analyte
6020A	3010A	Solid	Antimony
6020A	3010A	Solid	Thallium
8260B		Water	1,3-Dichloropropene, Total
8260B	5035	Solid	1,3-Dichloropropene, Total
Moisture		Solid	Percent Moisture
Moisture		Solid	Percent Solids

Job Number: 500-121121-1

Login Number: 121121

List Source: TestAmerica Chicago

List Number: 1

Creator: Scott, Sherri L

Question	Answer	Comment
Radioactivity wasn't checked or is \leq background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	3.3,4.5
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	False	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <math><6\text{mm}</math> (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

The test results in this report meet all 2003 NELAC and 2009 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

No additional comments.

Receipt

The samples were received on 12/8/2016 9:00 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 4.1° C.

GC/MS VOA

Method(s) 8260B: The method blank for batch 365228 was non-detect for all target analytes. Samples associated with this method blank detected Acetone just above the reporting limit. Acetone is a known lab contaminant; therefore all low level detects for this compound should be considered lab contamination. The results have been flagged with a "CN" to denote the probable contamination. 1314V3-07-G01 (500-121163-9)

Method(s) 8260B: The following sample was diluted due to the abundance of non-target analytes: 1314V3-07-B02 (0-5) (500-121163-10). Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC/MS Semi VOA

Method(s) 8270D: The method blank for preparation batch 500-364997 contained Naphthalene above the reporting limit (RL). None of the samples associated with this method blank contained the target compound; therefore, re-extraction and/or re-analysis of samples were not performed.

Method(s) 8270D: The following samples was diluted due to the nature of the sample matrix: 1314V3-07-B01 (0-6) (500-121163-8) and 1314V3-07-B02 (0-5) (500-121163-10). Elevated reporting limits (RLs) are provided.

Method(s) 8270D: Due to the large number of spiked analytes, there is a high probability that one or more analytes will recover outside acceptance limits. The laboratory's SOP allows for 3 analytes to recover outside criteria for this method when utilizing this list of analytes. The LCS associated with batch 365567 had 1 analyte outside control limits: 4-Nitroaniline. These results have been reported and qualified. (LCS 500-365567/2-A)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals

Method(s) 6010B: The following samples were diluted due to the nature of the sample matrix: 1314V3-07-B02 (0-5) (500-121163-10), 1314V3-07-B03 (0-5.5) (500-121163-11) and 1314V3-07-B04 (0-5) (500-121163-12). Elevated reporting limits (RLs) are provided.

Method(s) 6010B: The laboratory blank (LB) for preparation batch 500-364421 and 500-364618 contained Lead above the reporting limit (RL). The samples 1314V3-01-B10 (0-6) (500-121163-1), 1314V3-06-B10 (0-6) (500-121163-2), 1314V3-06-B10 (6-11) (500-121163-3), 1314V3-06-B11 (0-6) (500-121163-4), 1314V3-06-B11 (6-10.7) (500-121163-5), 1314V3-07-B01 (0-6) (500-121163-8), 1314V3-07-B02 (0-5) (500-121163-10), 1314V3-07-B04 (0-5) (500-121163-12) and 1314V3-07-B04 (5-11) (500-121163-13) associated with this LB did not contain the target compound; therefore, re-extraction and/or re-analysis of the samples were not performed.

Method(s) 6010B: The laboratory blank (LB) for preparation batch 500-364421 and 500-364618 and analytical batch 500-364787 contained Lead above the reporting limit (RL). Associated sample 1314V3-07-B03 (0-5.5) (500-121163-11) was not re-extracted and/or re-analyzed because results were greater than 10X the value found in the LB.

Method(s) 6020A: The low level continuing calibration verification (CCVL) associated with batch 500-364837, at line 160, recovered above the upper control limit for Thallium. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Method(s) 6020A: The CCB at lines 155 and 159 had results greater than the reporting limit(RL) of 2 ppb for TI. The samples associated

Case Narrative
