Machine screws shall be #8-32 with nuts and lock washer made of aluminum or stainless steel unless noted.

Other metal parts shall be made of Bronze, Brass, Copper Beryllium with non corrosive finish when necessary.

Reflector shall be made of .020" (Min.) Aluminum lighting sheet with specular finish and shall be 69" long.

Reflector shall be removable for cleaning without causing permanent distortion of Reflector shape. The reflecting surface shall have a dense protective coating of oxide not less than 7.5 milligrams per square inch. The Reflector shall be given a sealing treatment such that there will no staining when subject to a water solution (1 gram per 50 c.c.) of Anthraquinone violet R at room temperature. One drop of the solution shall be allowed to remain in contact with the surface for five minutes and wash away with running water. After drying with soft Cloth Observe for stain.

Ballast shall be rated at 1000 MA, 240 Volt and designed for Cold Weather reliable starting at -20°F, in conjuction with rapid start flourescent lamps T2T12-H.O.

Lamps to be mounted in fixture within 1" of grounded metal reflector which is full length of lamps.

Ballast and terminal blocks shall be marked with legible symbols. Conductors shall be tagged and their corresponding identification marked on the terminal board.

The Contractor shall aim and space the lighting fixture under night conditions to provide the most advantageous light distribution over the sign surface to be illuminated. Final aiming of the fixture shall be approved by the Engineer.

2. Wherever in these plans reference is made to the "Standard Specifications", it is understood to include the "Supplemental Specifications," effective January 3, 1966 and the supplemental Specifications for Highway Signing," effective March 1, 1963
4. The demountable letter used in the make-up of the Special Signs should be series E of the Standard Alphabets for Highway Signs modified by widening the stroke width of the upper case letter to approximately one fifth the capital letter or numeral height.
5. All Signs included in this contract shall be reflectorized.
6. The minimum dimensions from the edge of a Standard Arrow Symbol to the inside edge of the border shown are Standard 2140-3 shall be considered Standard unless otherwise specified.
7. Any Standard Signs indicated on the plans but not shown on the accompanying Standards, may be found in the State of Illinois Manual of Uniform Traffic Control Devices for Streets and Highways.
8. Sign panels shall be installed in accordance with Article H.S. 4.3 of the Supplemental Specifications.
9. The high point of the pavement at each location for Overhead Truss Signs shall be determined and this point shall be used as Elevation "A" for the Bench Mark in staking Truss foundations.

END DETAIL for END UNIT

The steel overhead sign trusses shall be hot-dipped galvanized after fabrication is completed in accordance with A.S.T.M. Designations A-123 and A-385. All closed or blind tubes or pipes of the trusses shall be vented with two one-half inch (2-½") holes located in such position that the tubes or pipes will not retain water after erection.

During shipment to and storage at the site the trusses shall be blocked and any portions which could be damaged shall be wrapped with tough, non-staining paper to preserve finish. The exposed surfaces of the trusses shall be of even texture, free from damage, marks, and imperfections.

Poor appearance or damage to the galvanizing surfaces of the trusses shall be sufficient cause for rejection. The cost of galvanizing the trusses shall be included in the contract unit price per lineal foot for OVERHEAD SIGN STRUCTURES.

METHOD OF DETERMINING FILLET HEIGHTS "f"

After All Structural Steel Has Been Erected, Elevations Of The Top Flanges Of The Beams Shall Be Taken At Intervals Shown On Sheets 41 Thru 55 These Elevations Subtracted From The Theoretical Grade Elevations Adjusted For Dead Load Deflection Shown On Sheets 41 Thru 55 Minus Slab Thickness (7) Equals The Fillet Heights Above Top Of Beams.

GENERAL SLAB NOTES

Note 'A' 2-Additional #5d Bars Inside Face Of Parapet At Each Handrail Post And Light Standard. 3-Additional #5d₂ Bars In Outside Face At Light Standard. Space bars to miss parapet joints.

Note 'B' Bars Indicated Thus 5x4-#5 Etc. Indicates 5 Lines Of Bars With 4 Lengths Per Line. Min. Bar Laps = 20 Dia. (Transverse Slab Bars Shall Have A Min. Lap Of 30 Dia.)

Note 'C' Transverse Bars In Horizontally Curved Slab Shall Be Spaced Radially. See Bar Spacing Diagram.

"AS REVISED" (3-26-68)

Note: At the request of the Contractor the diameter of the pier columns were increased from 5'-3" to 5'-6" and the collision wall from 5'-7" to 5'-10" in width with the resulting revision in reinforcement.

A construction joint was added at ± 27'-0" above the collision wall.

Quantities of Class X Concrete and Reinforcement have not been revised.
