¼ Size District 2 Standards

- 8.4 This can be used on Smart & 3P resurfacing projects to maintain a maximum 9% cross slope on the aggregate shoulder in front of existing guardrail. The guardrail could also be removed and re-erected or replaced if it is extremely tipped, out of alignment, damaged, not to current standards, or the height is more than 3" high or low from the initial standard used to install it. Smart projects are allowed up to 15% of the total contract cost for spot safety improvements. 3P projects can also have spot safety improvements, but both projects require BDE approval. Include pay items for Steel Plate Beam Guardrail, Type A (Special), and Aggregate Wedge Shoulder, Type B.
- 11.4, 12.4 & 13.4 These can be used when a new median or curb & gutter is placed on bare concrete pavement. This isn't used much because the first thing necessary is bare concrete, and there isn't much bare concrete in our District.
- 15.4 This is used to replace existing gutter outlets adjacent to a HMA shoulder. District 2 doesn't construct new gutter adjacent to stabilized shoulders; curb & gutter is used. Therefore, when curb & gutter is constructed adjacent to a stabilized shoulder, use Highway Standard 606101.
- 16.4 This is a specialized gutter outlet. Do not use this on curb & gutter. An example of when it would be used is to outlet the gutter over the top of a culvert headwall.
- 17.4 Use this standard for adjustment of catch basins or inlets.
- 18.4 This is a specialized curb & gutter outlet. This can be used when there is a ditch behind the curb & gutter and there aren't any inlets with frame & grate or Winnebago's in the curb & gutter.
- 19.4 Use this when RIPRAP is required at culvert end section. Check the hydraulic report for the apron length and the size of the riprap to be used. Be sure to show the dimensions on the plans.
- 19.4a Use this when concrete revetment mat is required at an end section. There is a table on the standard which needs to be filled out. Check the hydraulic report for the apron length. Be sure to show the dimensions on the plans.
- 20.4 Use this on across road culverts that have wingwalls that are not parallel with the culvert. This is a guide for the Resident Engineer & Contractor on how to construct the dirt around wingwalls.
- 21.4 If riprap is needed in ditches to control erosion, use this standard. Specify the pay item for Class A3 or A4. Add the dimensions to the typical section. The height of the riprap on the side slopes should extend approximately 6" higher than the computed depth of water in the ditch.
- 22.4 Use this for new HMA shoulders. If guardrail will be installed before the surface course is placed, like on staged bridge projects, use District Standard 23.4
- 23.4 Use this on projects where guardrail will be installed before the surface course is placed. This allows the guardrail to be installed and the shoulder resurfaced to the post so the posts do not have to be removed and re-erected. For example, staged bridge projects require guardrail to be installed for Stage 2, but all of the surface course is placed after the bridge is completed. If new HMA shoulders are constructed and guardrail will be installed after the HMA shoulder is installed, use District Standard 22.4.

- 24.4 Use this on projects with large changes in vertical alignment from the existing pavement to a new full depth pavement. This will require a thick resurfacing taper, pavement breaking, and variable depth subbase granular material.
- 27.4 Use this if the pipe underdrain for structures behind the bridge abutment will outlet into the riprap on the bridge cone. If not, use Highway Standard 601101.
- 28.4 Use this if storm sewer or field tile outlets through the backslope of the ditch. This can also be used for Cast-in-Place Reinforced Concrete End Section 8" or 10".
- 29.4 Include this standard if #16 Polymer Concrete is checked on the Recurring Special Provision check sheet.
- 30.4 This can be used in sandy soils to drain areas with poor drainage or no outlets. Materials must take soil borings to determine if the stone well will function properly.
- 31.4 This can be used in parking lots or for diagonal parking if there isn't a curb or curb & gutter.
- 32.4 Use this standard for peek-a-boo patching. Peek-a-boo patching is used to remove and replace the existing HMA on top of concrete pavement, up to a maximum of 8" thick.
- 33.4 Use this standard for pavement patching when the existing HMA overlay thickness is 8" or thicker.
- 34.4 Include this when constructing new water mains, or moving or relocating fire hydrants. Do not include this for the thrust blocks on Highway Standard 610001.
- 35.4 Use this standard in urban areas when removing and replacing sidewalk and driveway pavements.
- 36.4 When constructing concrete gutter, District 2 has a flat bottom gutter which is easier to construct. Do not include Highway Standard 606101. For gutter inlets, include #20.2 Standard Inlet for Type A Gutter (Special), and for outlets include #15.4 Gutter Outlet Adjacent to Stabilized Shoulder.
- 37.4 Include when installing new delineators. The purpose of rotating the post 180° is to give more support for the delineators so it doesn't break off.
- 38.4 Include this standard on 3P projects when there are areas along the edge of pavement that are badly deteriorated. Also include the appropriate Recurring Special Provision.
- 43.4 Include this standard if #13 HMA Surface Correction is checked on the Recurring Special Provisions check sheet. This milling is for surface corrections that will not be resurfaced. To date this has not been used in District 2.
- 44.4 Include this standard if #12 Subsealing of Concrete Pavements is checked on the Recurring Special Provisions check sheet. This is used with the pay items Dry Grout Solids and Holes Drilled. To date this has not been used in District 2.

- 46.4 This is used when replacing existing aerial speed check zones on resurfacing projects. Field check the project to determine if any exist.
- 50.4 Include this when adding embankment on an existing slope that is 4' high or more.
- 51.4 Use on any project that will be widening the existing embankment, contact Geotech with any questions.
- 63.4 Include this if Land Sections or ¼ Section Corners will be disturbed. Check with Land Acquisition for the existing section locations.
- 70.4 This can be used to save a tree on a slope that will be excavated. Usually there is a commitment in the project report to save a tree that requires a tree well.
- 71.4 Include this detail for installing or replacing steps adjacent to sidewalk.
- 79.4 These inlets, known as Winnebago's. No. 3 & 4, can be used with storm sewer up to 36" diameter, No. 5 & 6 can be used with storm sewer up to 24" diameter, 79.4a No. 7 can be used with storm sewer up to 48" diameter, and No. 8 can be used 79.4b with storm sewer up to 60" diameter. No. 4 & 6 have open backs for drainage 79.4c behind the inlets. Do not use Winnebago's with curb & gutter with gutter flags 79.4d less than 24", it makes the cross slope of the gutter flag too steep. This can be 79.4e dangerous for bicyclists, or people stepping off of the curb. Instead, use an 79.4f inlet with a frame & grate to fit the curb & gutter. When using 79.4, 79.4a, 79.4g 79.4b, or 79.4c, also include 79.4f & 79.4g. When using 79.4d & 79.4e, also 79.4h include 79.4f & 79.4h.
- 80.4 This can be used to lower an existing 3' x 3' median inlet.
- 83.4 Use this to replace broken grates or to replace a grate that isn't bicycle safe. Measure the existing grate to ensure this will fit.
- 87.4 Use this on permanent median crossovers where an emergency opening is needed. If an emergency opening isn't needed, use District Standard 98.4. Check with Operations to see if an opening is needed.
- 88.4 Use this in urban areas with new pavement, subbase, and storm sewer. The purpose of this is to drain the subbase.
- 91.4 This is usually used to replace existing rumble strips in the traffic lane before stop signs. It can also be used at new locations to reduce accidents.
- 96.4 Use this on new pavements with subbase where there will be ditches. Place one in all low points and others at approximately 250' intervals.
- 97.4 Include this for full depth patching. The quantity for subgrade replacement will be approximately 10-20% of the area of the full depth patches. Remember to include the BDE special provision for Aggregate Subgrade Improvement.
- 98.4 Use this on permanent median crossovers where an emergency opening is not needed. If an emergency opening is needed, use District Standard 87.4. Check with Operations to see if an opening is needed.
