GENERAL NOTES

GENERAL CLEANING SHALL CONSIST OF THE REMOVAL OF SOIL AND/OR ROCK BUILD UPS, DEBRIS, AND OTHER CONSTRICTIONS PREVENTING STEADY FLOW OF PAVED DITCHES AND CULVERTS OUT 25' FROM THE ROADWAY DITCH OR TO THE R.O.W. LINE WHICHEVER COMES FIRST AS DIRECTED BY THE ENGINEER. GENERAL CLEARING SHALL BE IN ACCORDANCE WITH ARTICLE 201.01 (o) OF THE STANDARD SPECIFICATIONS. GENERAL CLEANING AND OR GENERAL CLEARING WILL ONLY BE MEASURED FOR PAYMENT WHEN IT IS THE CONTROLLING WORK AND IS NOTED FOR PAYMENT IN THE PLANS. WHEN PAYMENT IS MADE, IT SHALL BE IN ACCORDANCE WITH ARTICLE 109.04 (b) OF THE STANDARD SPECIFICATIONS.

IT SHALL BE THE CONTRACTORS RESPONSIBILITY TO VERIFY ALL EXISTING FIELD DIMENSIONS AND CONDITIONS PRIOR TO CONSTRUCTION AND ORDERING OF MATERIALS.

ALL OBSTRUCTIONS WHICH ARE WITHIN THE LIMITS SHOWN ON THE CLEAR ZONE SHEET AND WHICH ARE NOT SHIELDED BY GUARDRAIL, SHALL BE REMOVED. TYPICAL OBSTRUCTIONS ARE HEADWALLS, FOUNDATIONS, ETC. WHICH PROJECT 4" OR MORE ABOVE THE GROUNDLINE, AND TREES WHICH WILL MATURE TO A DIAMETER OF 4" OR GREATER.

FACTORS USED FOR ESTIMATING PLAN QUANTITIES ARE AS FOLLOWS AND SHALL NOT BE USED FOR THE BASIS OF FINAL QUANTITIES:

ALL BITUMINOUS CONCRETE	2.016 TONS/CU. YD.
STONE RIPRAP	1.50 TONS/CU. YD.
AGGREGATE PRIME COAT	0.0015 TONS/SQ. YD.
BITUMINOUS MATERIALS (PRIME COAT)	0.09 GALLONS/SQ. YD.
ALL AGGREGATE	2.05 TONS/CU. YD.

TREES SHALL BE PRESERVED THROUGHOUT THIS SECTION AS SHOWN ON THE PLANS AND AS DIRECTED BY THE ENGINEER. GENERALLY, TREES OUTSIDE THE CLEAR ZONE, AND WHICH DO NOT INTERFERE WITH CONSTRUCTION, SHALL NOT BE DISTURBED.

FOR THE PURPOSE OF THIS CONTRACT, EARTHWORK COMPACTION SHALL BE TO THE SATISFACTION OF THE ENGINEER.

REPLACEMENT OF ALL CULVERTS SHALL BE CONSTRUCTED IN ACCORDANCE WITH METHOD II AS SPECIFIED IN ARTICLE 542.05 OF THE STANDARD SPECIFICATIONS.

THE ENTIRE LENGTH OF ALL EXISTING CULVERTS SHALL BE CLEANED OF ALL EARTH AND DEBRIS BY THE CONTRACTOR TO THE SATISFACTION OF THE ENGINEER. THE COST OF THIS WORK SHALL BE PAID ACCORDING TO ARTICLE 109.04 OF THE STANDARD SPECIFICATIONS.

THE THICKNESS OF BITUMINOUS MIXTURE SHOWN ON THE PLANS IS THE NOMINAL THICKNESS. DEVIATIONS FROM THE NOMINAL THICKNESS WILL BE PERMITTED WHEN SUCH DEVIATIONS OCCUR DUE TO IRREGULARITIES IN THE EXISTING SURFACE OR BASE ON WHICH THE BITUMINOUS MIXTURE IS PLACED.

THE ALGEBRAIC DIFFERENCE BETWEEN THE PAVEMENT AND SHOULDER SLOPES SHALL NOT EXCEED 8%. THE SHOULDER ON THE OUTSIDE OF SUPERELEVATED CURVES SHALL BE FLATTENED ACCORDINGLY.

THE QUANTITY SHOWN FOR MIXTURE FOR CRACKS, JOINTS AND FLANGEWAYS IS AN ESTIMATE. THE ACTUAL AMOUNT USED WILL BE DETERMINED BY THE ENGINEER.

THE QUANTITY OF SHORT TERM PAVEMENT MARKING SHOWN IN THE PLANS WAS BASED ON ONE APPLICATION EACH FOR THE PRIME COAT, SURFACE COURSE, AND BINDER COURSE.

THE CONTRACTOR SHALL STAMP ENGLISH STATIONING IN THE PROPOSED BITUMINOUS SURFACE AT 300' INTERVALS ALONG THE OUTSIDE EDGE OF THE PAVEMENT. ALSO, THE LETTER "H" SHALL BE STAMPED IN THE SHOULDER AT EVERY PIPE UNDERDRAIN OUTLET LOCATION AS DIRECTED BY THE ENGINEER. THE STATION SYMBOL STAMPS USED SHALL BE FURNISHED BY THE CONTRACTOR. THEY SHALL BE 5 1/2" TALL, OF A DESIGN APPROVED BY THE ENGINEER, AND SHALL REMAIN THE PROPERTY OF THE CONTRACTOR.

THE EDGES OF ALL PAVEMENT PATCHES SHALL BE SAWED TO THE FULL DEPTH OF THE EXISTING PAVEMENT. NO OVERSAWING WILL BE ALLOWED WHEN THE PATCH IS IN ONLY ONE LANE.

THE MACHINE OR EQUIPMENT USED FOR DRILLING DOWEL HOLES FOR THE FULL DEPTH P.C.C. PATCHES SHALL BE CAPABLE OF AND SHALL DRILL A MINIMUM OF 5 HOLES AT A TIME AT RIGHT ANGLES TO THE PAVEMENT. ALL DOWELS IN THIS PATCHING CONTRACT ARE AT RIGHT ANGLES TO THE PAVEMENT.

WHEN THE EXISTING PAVEMENT LANE WIDTH IS GREATER OR LESS THAN 12' THE NUMBER OF DOWELS IN EACH PATCH SHALL BE ADJUSTED AS DIRECTED BY THE ENGINEER TO MAINTAIN AN EQUIVALENT DISTRIBUTION.

CLASS B PATCHING SHALL BE USED AT:

INTERCHANGE RAMP PAVEMENTS INCLUDING THE ACCELERATION/DECELERATION LANES. SEE PLAN SHEETS 70 AND 72.

SAWCUTS REQUIRED FOR BUTT JOINTS SHALL NOT BE PAID FOR SEPARATELY BUT SHALL BE INCLUDED IN THE COST OF THE BUTT JOINT.

EXPANSION JOINTS SHALL BE CLEANED AND FILLED IN ACCORDANCE WITH ARTICLE 406.06. FIELD MEASUREMENTS INDICATE THAT THERE ARE 48 JOINTS WITHIN THE IMPROVEMENT LIMITS OF JOHNSON COUNTY THAT ARE 24' IN WIDTH, OF WHICH 24 ARE IN THE EASTBOUND LANES AND 24 ARE IN THE WESTBOUND LANES. THE FINAL QUANTITY MAY BE ADJUSTED BY THE ENGINEER. FIELD SURVEY DATE DEC. 2, 2003..

THE CONTRACTOR SHALL COMPLETE BITUMINOUS SURFACE REMOVAL OPERATIONS IN AN AREA BEFORE BEGINNING PAVEMENT PATCHING IN THE SAME AREA.

THE COLOR OF THE DELINEATORS PLACED AT ANY LOCATION SHALL BE IN ACCORDANCE WITH STANDARD 635001 EXCEPT WHERE A CONFLICT EXISTS BETWEEN THE DELINEATOR AND THE PAVEMENT MARKING; THEN, THE DELINEATOR SHALL MATCH THE COLOR OF THE PAVEMENT MARKING.

THE ILLINOIS STATE POLICE, DISTRICT 22, BASED IN ULLIN, PHONE NO. 618-845-3740, SHALL BE NOTIFIED AT LEAST 10 DAYS PRIOR TO PLACEMENT OF THERMOPLASTIC PAVEMENT MARKING LINE 24" NOTED IN THE PAVEMENT MARKIING SCHEDULE.

THE REMOVAL OF EXISTING DELINEATORS, POSTS, AND REFLECTORS SHALL NOT BE PAID FOR SEPARATELY BUT SHALL BE INCLUDED IN THE CONTRACT UNIT PRICE EACH FOR DELINEATORS.

UNLESS OTHERWISE DIRECTED BY THE ENGINEER, BITUMINOUS RESURFACING SHALL BE PLACED IN A SEQUENCE THAT WILL MINIMIZE THE TIME THE CENTERLINE EDGE IS EXPOSED TO TRAFFIC. THE ELEVATION DIFFERENCE BETWEEN LANES SHALL BE ELIMINATED WITHIN TWELVE CALENDAR DAYS. PRIOR TO WINTER SHUTDOWN, RESURFACING ON ADJACENT LANES IS TO BE BROUGHT UP TO THE SAME ELEVATION.

RUMBLE STRIPS SHALL BE CONSTRUCTED ON ALL BITUMINOUS SHOULDERS IN ACCORDANCE WITH STANDARD 642001.

THE DISTRICT BUREAU OF OPERATIONS SHALL BE NOTIFIED AT LEAST TEN WORKING DAYS PRIOR TO PLACEMENT OF FINAL PAVEMENT MARKINGS.

THE RESIDENT ENGINEER SHALL DETERMINE THE EXISTING CLEARANCE BENEATH OVERPASS STRUCTURES AND, IF NECESSARY, DIRECT THE CONTRACTOR TO TAPER THE THICKNESS OF THE BINDER AND/OR SURFACE COURSE AT A RATE OF 300:1 OR FLATTER TO MAINTAIN A MINIMUM CLEARANCE OF 16' AT OVERHEAD BRIDGES AND 17' AT SIGN TRUSSES.

AFTER A LIFT OF BITUMINOUS CONCRETE HAS BEEN PLACED ON A LANE, THAT LANE SHALL REMAIN CLOSED TO TRAFFIC UNTIL THE NEW MAT HAS COOLED TO 150°F.

IN ADDITION TO THE REQUIREMENTS OF ARTICLE 107.16, THE CONTRACTOR SHALL PROTECT THE SURFACE OF ALL BRIDGE DECKS AND BRIDGE APPROACH PAVEMENTS IN A MANNER SATISFACTORY TO THE ENGINEER BEFORE ANY EQUIPMENT IS ALLOWED TO CROSS THE STRUCTURE. PROTECTION SHALL BE PROVIDED FOR ALL EQUIPMENT AS DEFINED IN ARTICLE 101.17 REGARDLESS IF TRACK MOUNTED OR WHEELED.

RECLAIMED ASPHALT PAVEMENT (RAP) WILL NOT BE ALLOWED FOR USE AS AGGREGATE IN AGGREGATE SHOULDERS, TYPE B.

THE DEPARTMENT RESERVES THE RIGHT TO DELETE THE ENGINEER'S FIELD OFFICE AT NO ADDITIONAL COST.

THE EXCAVATED MATERIAL FROM CONSTRUCTING ENERGY DISSIPATORS, GABIONS, AND DITCH CLEANING SHALL BE PLACED AROUND CULVERTS AND OTHER AREAS WHERE EROSION PROBLEMS EXIST AS DIRECTED BY THE ENGINEER.

THE CONTRACTOR IS TO CLEAN ALL MEDIAN INLETS OF GRASS CLIPPINGS, SILT, AND OTHER DEBRIS. THE COST FOR THIS WORK SHALL BE PAID FOR AS PER ARTICLE 109.04 OF THE STANDARD SPECIFICATIONS.

ANY PRODUCTION OR PLACEMENT OF BITUMINOUS MIXTURES OCCURRING PRIOR TO THE TEST STRIP EVALUATION IS AT THE CONTRACTOR'S OWN RISK.

DUE TO THE EXTREMELY FLAT GRADES IN SOME AREAS OF THE PROJECT, THE REQUIREMENT FOR A MINIMUM LONGITUDINAL SLOPE OF 0.4% FOR PIPE UNDERDRAINS, AS SHOWN ON STANDARD 601001, IS WAIVED BETWEEN STA. 401+00 (MP 14.9) TO STA. 423+00 (MP 15.3); STA. 200+00 (MP 19.0) TO STA. 244+75 (MP 19.8); STA. 285+00 (MP 20.6) TO STA. 307+00 (MP 21.1); AND STA. 448+00 (MP 23.7) TO STA. 457+44.5 (MP 23.9).

EXCEPT FOR EARTH EXCESS, THERE ARE NO WASTE SITES AVAILABLE FOR USE BY THE CONTRACTOR WITHIN THIS CONTRACT. THE SURPLUS MATERIAL SHALL BE DISPOSED OF IN ACCORDANCE WITH ARTICLE 202.03 OF THE STANDARD SPECIFICATIONS AND AS DIRECTED BY THE ENGINEER.

THE MASTIC SEALANT TO SEAL EXISTING PAVED DITCH JOINTS NOTED IN THE PLANS SHALL MEET THE REQUIREMENT AS SPECIFIED IN SECTION 1055 OF THE STANDARD SPECIFICATIONS.

THE COST OF THE CA-16 BACKFILL MATERIAL FOR THE PROPOSED PIPE UNDERDRAINS SHALL BE INCLUDED IN THE CONTRACT UNIT PRICE PER FOOT FOR PIPE UNDERDRAINS, 4".

THERE WILL BE NO CALCIUM CHLORIDE ACCELERATORS ALLOWED.

ALL UNDERDRAIN 4" (SPECIAL) WILL BE CONNECTED TO THE UNDERDRAIN 4" BY USING ELBOWS. NO ON SITE BENDS IN THE UNDERDRAIN MATERIAL TO MAKE THE TRANSITION WILL BE ALLOWED.

ONE CHANGEABLE MESSAGE SIGN IN ADDITION TO THOSE SHOWN ON THE HIGHWAY STANDARDS WILL BE REQUIRED. ⚠1

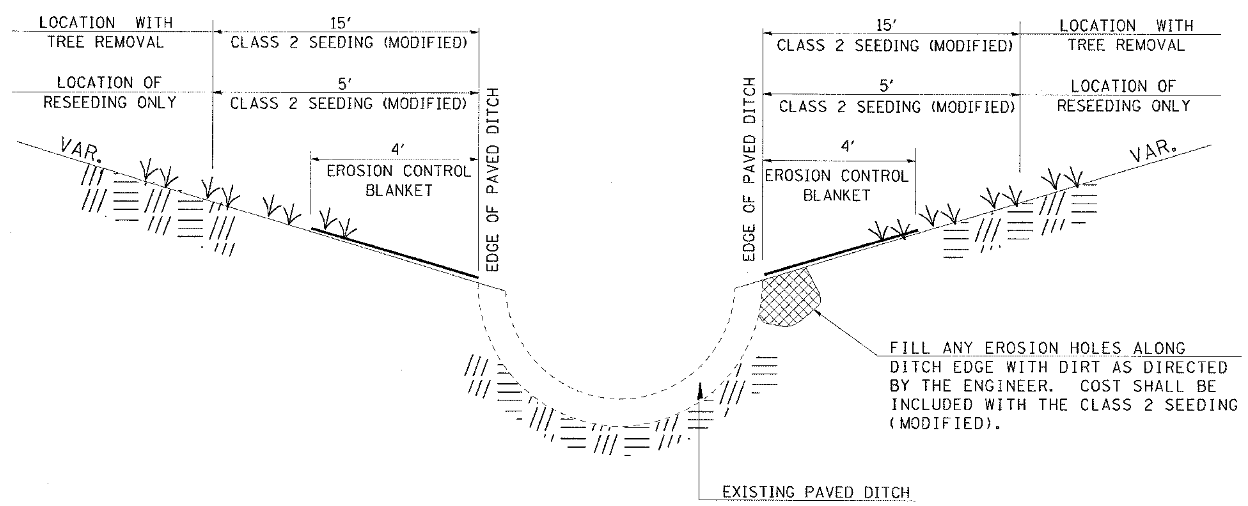
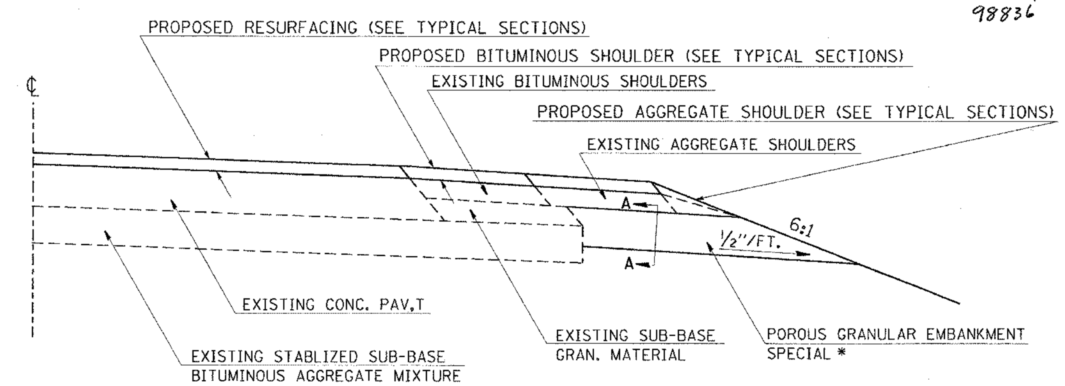
DETAIL SEEDING AT EXISTING PAVED DITCH



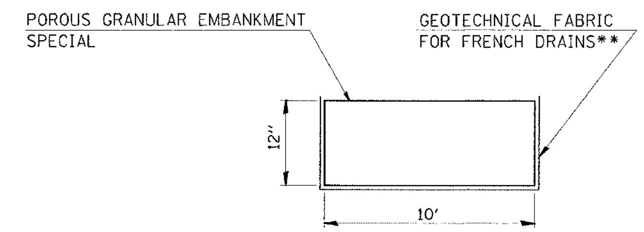
NOTES: THIS WORK SHALL BE PAID FOR AT THE CONTRACT UNIT PRICE PER ACRE FOR CLASS 2 SEEDING (MODIFIED), AND PER SQ. YD. FOR EROSION CONTROL BLANKET, WHICH PRICE SHALL INCLUDE ALL MATERIAL, LABOR AND EQUIPMENT TO COMPLETE THE WORK IN PLACE AS SHOWN.

THE PROPOSED SEEDING SHALL CONTINUE TO AT LEAST 1' PAST THE UPSTREAM AND DOWNSTREAM ENDS OF THE EROSION CONTROL BLANKET.

DETAIL OF GRANULAR SUB-SURFACE DRAINS



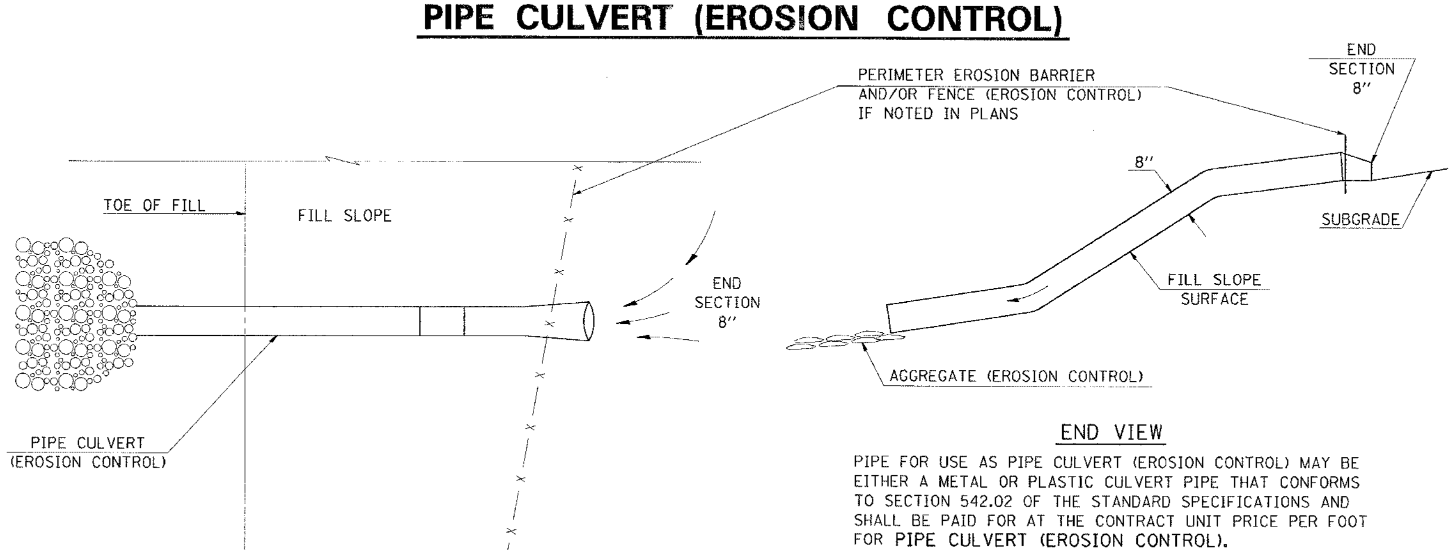
NOTE:
SEE SCHEDULE ON SHEET NO. 17 FOR LOCATIONS TO BE USED.



SECTION A-A

* SUB-SURFACE DRAINS SHALL BE CONSTRUCTED AS SHOWN AND AS DIRECTED BY THE ENGINEER.
** MATERIAL SHALL BE IN ACCORDANCE WITH ARTICLE 601.06 OF THE STANDARD SPECIFICATIONS. THE FABRIC TO WRAP THE TRENCH AS SHOWN WILL NOT BE PAID FOR SEPARATELY, BUT SHALL BE INCLUDED IN THE CONTRACT UNIT PRICE FOR POROUS GRANULAR EMBANKMENT, SPECIAL.

PIPE CULVERT (EROSION CONTROL)



PLAN VIEW

END VIEW

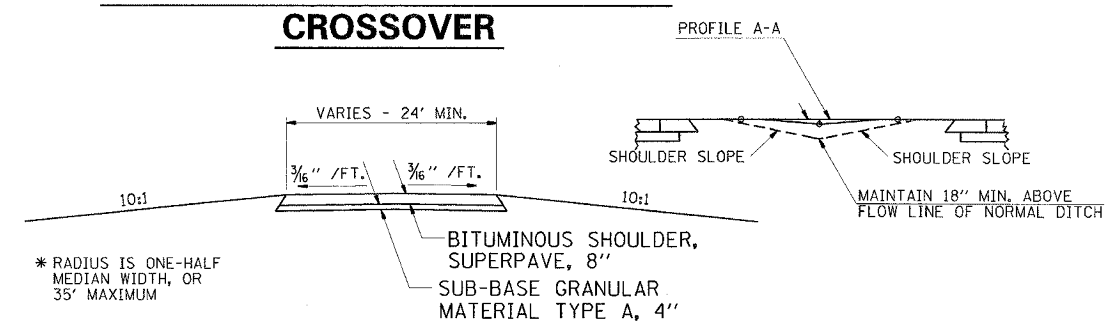
NOTE: REMOVAL OF PIPE CULVERT (EROSION CONTROL), END SECTION, PERIMETER EROSION BARRIER, FENCE (EROSION CONTROL) IF NOTED IN PLANS, AND AGGREGATE (EROSION CONTROL), SHALL NOT BE PAID FOR SEPERATELY BUT SHALL BE INCLUDED IN THE UNIT PRICE FOR THE EROSION CONTROL ITEMS.

PIPE FOR USE AS PIPE CULVERT (EROSION CONTROL) MAY BE EITHER A METAL OR PLASTIC CULVERT PIPE THAT CONFORMS TO SECTION 542.02 OF THE STANDARD SPECIFICATIONS AND SHALL BE PAID FOR AT THE CONTRACT UNIT PRICE PER FOOT FOR PIPE CULVERT (EROSION CONTROL).
IN SOME CASES IT MAY BE NECESSARY TO SECURE PIPE TO THE FILL SLOPE TO OBTAIN PROPER ANCHORAGE. MATERIALS USED FOR THIS PURPOSE SHALL BE CONSIDERED INCLUDED IN THE COST OF THE PIPE.

END SECTIONS SHALL BE INSTALLED AT THE INLET END. THIS ITEM SHALL BE PERFORMED AND PAID FOR AS SPECIFIED FOR END SECTIONS IN ARTICLES 542.07 AND 542.11 OF THE STANDARD SPECIFICATIONS; EXCEPT, ONLY METAL END SECTIONS AS SHOWN ON STANDARD 542401 WILL BE PERMITTED, AND THE WORK WILL BE PAID FOR AT THE CONTRACT UNIT PRICE EACH FOR METAL END SECTIONS OF THE DIAMETER SPECIFIED IN THE PLANS.

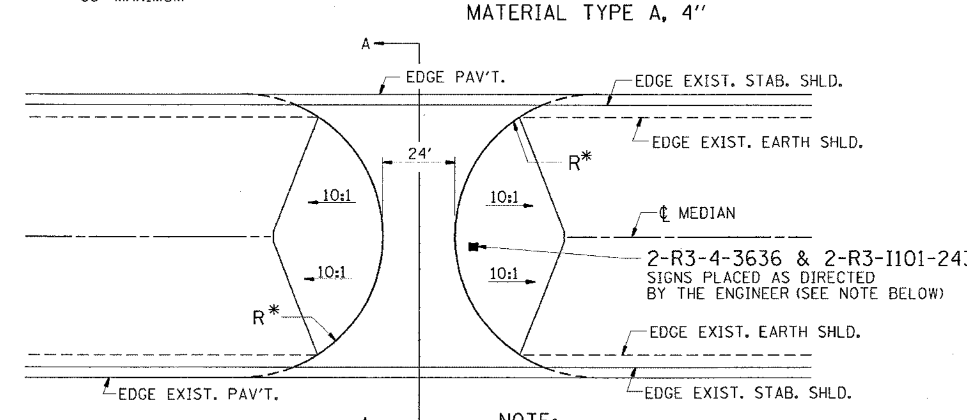
TEMPORARY RIPRAP AT THE OUTLET END MAY BE END DUMPED AND SHALL BE PAID FOR AT THE CONTRACT UNIT PRICE PER TON FOR AGGREGATE (EROSION CONTROL).

DETAIL OF PROPOSED MEDIAN CROSSOVER



* RADIUS IS ONE-HALF MEDIAN WIDTH, OR 35' MAXIMUM

TO BE USED:
STA. 322+41
STA. 88+65
STA. 231+46



NOTE:
THE PROPOSED CROSSOVER SURFACE SHALL BE BUTTED TO THE EDGE OF THE RESURFACED STABILIZED SHOULDER. SEE SHEET NO. 17 FOR SCHEDULE OF GRADING AND SHAPING EXISTING MEDIAN CROSS-OVERS.

EARTHWORK SHALL BE COMPACTED TO THE SATISFACTION OF THE ENGINEER.

NOTE:
THE SIGN ASSEMBLY FOR EACH LOCATION SHALL BE PAID FOR AT THE CONTRACT UNIT PRICE EACH FOR "RELOCATE SIGN PANEL ASSEMBLY - TYPE B". EXISTING SIGN SUPPORTS SHALL BE USED FOR NEW INSTALLATION.

STD 9-55 MODIFIED

PLAN

NOTES:

THIS WORK CONSIST OF THE REPAIR OF DAMAGED REINFORCED CONCRETE.

DAMAGED REINFORCED CONCRETE SHALL BE REMOVED DOWN TO SOUND CONCRETE IN ACCORDANCE WITH ARTICLE 501.03 OF THE STANDARD SPECIFICATIONS FOR ROAD AND BRIDGE CONSTRUCTION.

ALL REMOVED CONCRETE SHALL BE DISPOSED OF IN ACCORDANCE WITH ARTICLE 202.03 OF THE STANDARD SPECIFICATIONS.

THE CONTRACTOR SHALL PLACE EXPANSION BOLTS ½" IN DIAMETER AT 7" CENTERS AND EPOXY GROUTED AS PER SECTION 584 OF THE STANDARD SPECIFICATIONS.

THE CONTRACTOR SHALL PLACE ANY EXPANSION BOLTS AND CONCRETE TO THE DIMENSION SHOWN IN THIS DETAIL.

CONCRETE PLACEMENT SHALL BE IN ACCORDANCE WITH THE APPLICABLE PORTIONS OF SECTION 503 OF THE STANDARD SPECIFICATIONS.

CLASS SI CONCRETE SHALL BE USED THROUGHOUT.

EXPOSED EDGES SHALL BE BEVELED ¾".

SEE THE CULVERT REPAIR SCHEDULE SHEET 14 FOR THE INFORMATIONAL QUANTITIES OF CONCRETE REMOVAL, SAW CUTS, EXPANSION BOLTS ½" AND CLASS SI CONCRETE ITEMS.

THIS WORK SHALL BE PAID FOR AS EACH FOR CONCRETE HEADWALL REPAIR WHICH PRICE SHALL INCLUDE ALL LABOR AND MATERIALS REQUIRED TO REPAIR THE EXISTING HEADWALL.

NOTES:

THIS WORK CONSIST OF THE REPAIR OF DAMAGED REINFORCED CONCRETE.

DAMAGED REINFORCED CONCRETE SHALL BE REMOVED DOWN TO SOUND CONCRETE IN ACCORDANCE WITH ARTICLE 501.03 OF THE STANDARD SPECIFICATIONS FOR ROAD AND BRIDGE CONSTRUCTION.

ALL REMOVED CONCRETE SHALL BE DISPOSED OF IN ACCORDANCE WITH ARTICLE 202.03 OF THE STANDARD SPECIFICATIONS. REBAR AND/OR EXPANSION BOLTS SHALL BE PLACED IN ACCORDANCE WITH ARTICLE 584 OF THE STANDARD SPECIFICATIONS.

THE CONTRACTOR SHALL PLACE ANY NECESSARY REBAR, EXPANSION BOLTS AND CONCRETE TO THE DIMENSION SHOWN IN THIS DETAIL.

CONCRETE PLACEMENT SHALL BE IN ACCORDANCE WITH THE APPLICABLE PORTIONS OF SECTION 503 OF THE STANDARD SPECIFICATIONS.

CLASS SI CONCRETE SHALL BE USED THROUGHOUT.

EXPOSED EDGES SHALL BE BEVELED ¾".

SEE THE CULVERT REPAIR SCHEDULE SHEET 14 FOR THE INFORMATIONAL QUANTITIES OF CONCRETE REMOVAL, SAW CUTS, EXPANSION BOLTS ½" AND CLASS SI CONCRETE ITEMS.

THIS WORK SHALL BE PAID FOR AS EACH FOR WINGWALL REPAIR COMPLETE WHICH PRICE SHALL INCLUDE ALL LABOR AND MATERIALS REQUIRED TO REPAIR THE EXISTING WINGWALLS.

SECTION A-A

EARTH EXCAVATION FOR ENERGY DISSIPATOR

THIS WORK INVOLVES THE EXCAVATION OF EARTH AS SHOWN IN THE SKETCH TO THE LENGTH, WIDTH, AND DEPTH AS SPECIFIED. THE EARTH EXCAVATION WILL BE UTILIZED IN THE ROADWAY EMBANKMENT OR WASTED AS DIRECTED BY THE ENGINEER.

EARTHWORK WILL BE CONSIDERED INCLUDED IN THE COST OF THE RIPRAP.

ENERGY DISSIPATOR IS TO BE CONSTRUCTED AT THE LOCATION INDICATED ON THE PLAN SHEETS.

RIPRAP FOR ENERGY DISSIPATOR

RIPRAP FOR ENERGY DISSIPATOR SHALL BE CONSTRUCTED IN ACCORDANCE WITH SECTION 281 OF THE STANDARD SPECIFICATIONS EXCEPT AS REVISED HEREIN.

THE LENGTH, WIDTH, AND DEPTH FOR RIPRAP PLACEMENT SHALL BE AS SPECIFIED IN THESE DETAILS, UNLESS OTHERWISE INDICATED IN THE PLANS.

THE RIPRAP FOR THE ENERGY DISSIPATOR SHALL BE PAID FOR AT THE CONTRACT UNIT PRICE PER SQUARE YARD FOR **STONE DUMPED RIPRAP, CLASS A4**

FILTER FABRIC AND BEDDING MATERIAL AS SPECIFIED IN SECTION 281 OF THE STANDARD SPECIFICATIONS WILL NOT BE REQUIRED.

NOTES

THIS WORK INCLUDES THE EARTH EXCAVATION REQUIRED TO PLACE THE RIPRAP AS SHOWN. THE MATERIAL RESULTING FROM THE EARTH EXCAVATION SHALL BE PLACED IN THE ROADWAY EMBANKMENT, OR WASTED AS DIRECTED BY THE ENGINEER. THE EARTHWORK SHALL BE CONSIDERED INCLUDED IN THE COST OF THE DITCH.

THE RIPRAP DITCH SHALL BE CONSTRUCTED AT THE LOCATIONS SHOWN IN THE PLANS OR AS DIRECTED BY THE ENGINEER. CONSTRUCTION OF THE STONE RIPRAP DITCH SHALL CONFORM TO THE REQUIREMENTS FOR CLASS A3 RIPRAP AS INDICATED IN SECTION 281 OF STANDARD SPECIFICATIONS.

THIS WORK SHALL BE PAID FOR AT THE CONTRACT UNIT PRICE PER TON FOR **STONE RIPRAP, CLASS A3,** WHICH PRICE SHALL INCLUDE ALL MATERIAL, LABOR AND EQUIPMENT TO COMPLETE THE WORK IN PLACE AS SHOWN.

BEDDING MATERIAL AND FILTER FABRIC AS SPECIFIED IN SECTION 281 OF THE STANDARD SPECIFICATIONS WILL NOT BE REQUIRED.

THE WIDTH OF THE RIPRAP DITCH WILL BE AS SPECIFIED IN THE PLANS OR AS DIRECTED BY THE ENGINEER.

DETAIL STONE RIPRAP DITCH

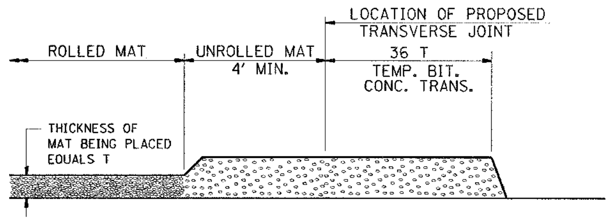
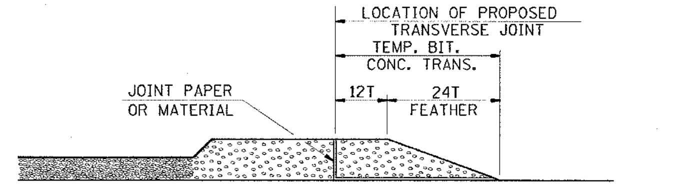
TEMPORARY BITUMINOUS CONCRETE TRANSITIONS



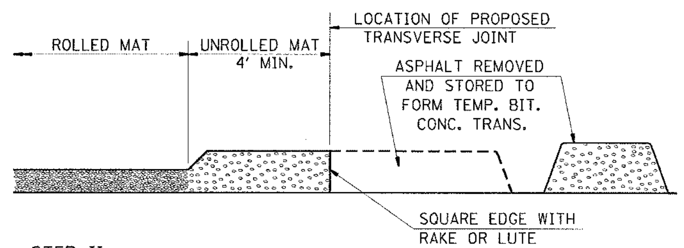
STEP I

1. PLACE BITUMINOUS MAT, LENGTH 36 TIMES THE THICKNESS OF THE MAT BEING PLACED PAST THE PROPOSED TRANSVERSE JOINT LOCATION USING NORMAL OPERATING PROCEDURES.
2. EXTREME CARE SHOULD BE TAKEN TO MAINTAIN ENOUGH MATERIAL IN FRONT OF THE SCREED TO MAINTAIN REQUIRED PAVING DEPTH.



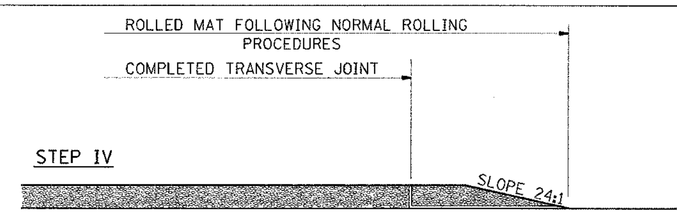
STEP III

1. JOINT PAPER OR OTHER PRESELECTED JOINT MATERIAL IS THEN PLACED IN THE CLEARED AREA AND THE EXCESS ASPHALT USED TO HAND FORM A TRANSITION TO THE DIMENSIONS SHOWN ABOVE.
2. NOTE THAT IN CONSTRUCTING THE TRANSITION, THE MAT DEPTH IS CONTINUED AS PART OF THE TRANSITION BEFORE FORMING THE FEATHER.



STEP II

1. MOVE THE PAVER OUT OF THE WAY AND REMOVE THE ASPHALT FROM THE AREA OF THE PROPOSED TEMPORARY BITUMINOUS CONCRETE TRANSITION.
2. SQUARE UP THE END OF THE MAT WITH A RAKE OR LUTE.
3. NOTE THAT THE MAT WITHIN 4' OF THE END OF JOINT IS NOT TO BE ROLLED AT THIS TIME.



STEP IV

1. COMPLETE TEMPORARY TRANSITION BY ROLLING.
2. TO RESUME PAVING, AT THE JOINT, REMOVE TEMPORARY TRANSITION AND DISPOSE OF THE MATERIAL ACCORDING TO ART. 202.03 OF THE STD. SPECS. (COST INCLUDED IN THE CONTRACT).
3. CONSTRUCTING THE TEMPORARY TRANSITIONS WILL BE PAID FOR IN ACCORDANCE WITH ART. 406.24 OF THE STD. SPECS.

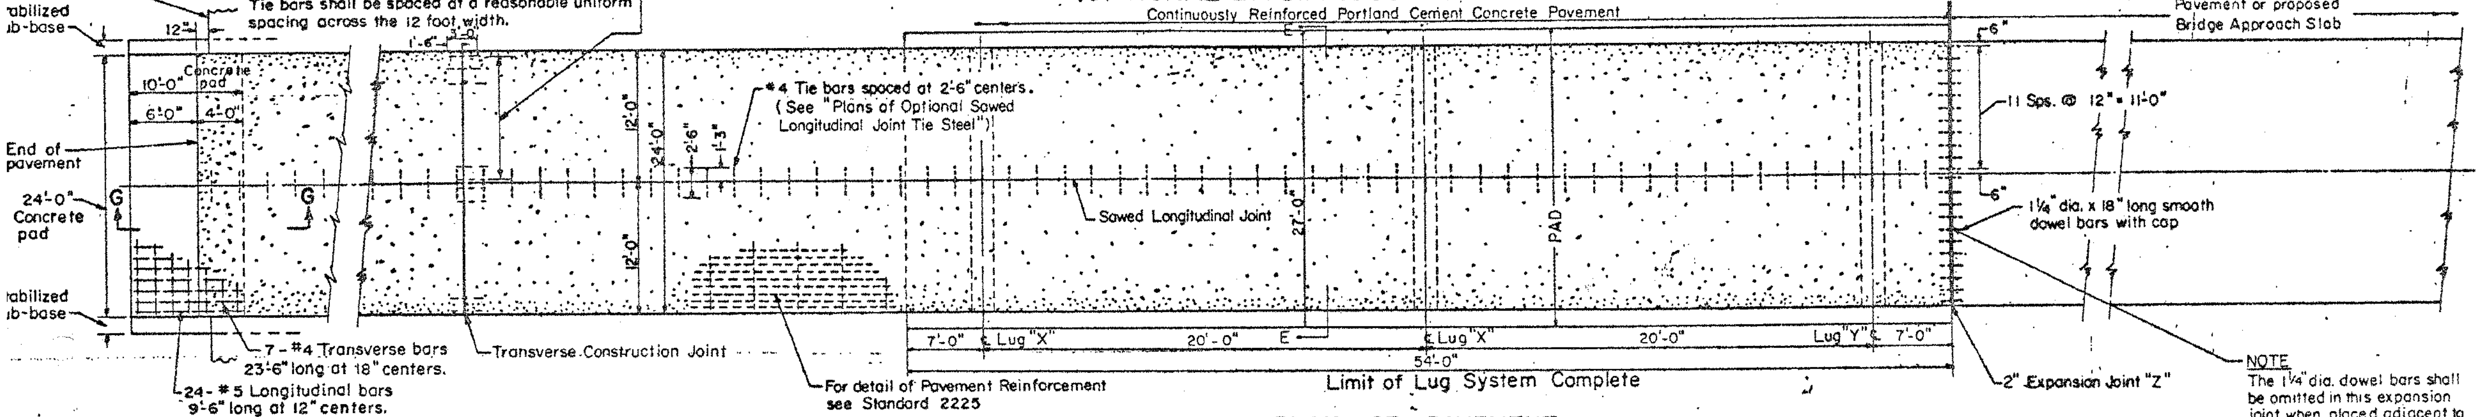
STANDARD DESIGN

24 FT.- CONTINUOUSLY REINFORCED PORTLAND CEMENT CONCRETE PAVEMENT

(OPTIONAL BITUMINOUS AGGREGATE MIXTURE PAD)



PLAN OF PAVEMENT

NOTE:
The 1¼" dia. dowel bars shall be omitted in this expansion joint when placed adjacent to existing pavement.

When pavement is adjacent to bridge approach slab, this expansion joint shall be provided in lieu of the 4" expansion joint shown on the Standard Drawings for Bridge Approaches.

NOTE:
When a slip form paver not equipped with approved automatic grade controls is to be used, it shall operate on the BAM pad which shall be extended so that the overall width is 6 inches greater than the width from outside to outside of the slip form paver's tracks. Such extended width will not be measured for payment but shall be considered incidental to the contract.

If the slip form paver is equipped with approved automatic grade controls that control the four corner supports of the paver and the Contractor elects to use these controls, the BAM pad shall be 12 inches wider than the design pavement width.

GENERAL NOTES

Sawed joints shall be sealed with hot poured material meeting the requirements of the Tentative Specifications for Concrete Joint Sealer, Hot-Poured Elastic Type, A.S.T.M. Designation: D1190-52 T, or sealed with a cold applied, ready-mixed concrete joint sealing compound meeting the requirements of Article 716.03

Lug end anchorages shall be constructed at the locations shown except that when the distance between two expansion joints marked "Z" is less than 1500 ft. the anchorage shall be as shown on the detailed construction plans.

The 54 feet as shown above of Bituminous Aggregate Mixture Pad, between and adjacent to the lugs will be considered incidental to the Lug System.

Expansion joint shall be considered incidental to the cost of Continuously Reinforced Concrete Pavement.

Details shown in Section G-G shall apply only at the end of the construction section; the 10" reinforced concrete pad, header board, wood blocking, and the 5 ft. of extended pavement reinforcement will be considered incidental to the cost of the C.R.C. Pavement.

PLAN

GENERAL NOTES

Plan dimensions and details relative to existing structure have been taken from existing plans and are subject to nominal construction variations. It shall be the Contractor's responsibility to verify such dimensions and details in the field and make necessary approved adjustments prior to construction or ordering of materials. Such variations shall not be cause for additional compensation for a change in the scope of the work, however, the Contractor will be paid for the quantity actually furnished at the unit price bid for the work.

Joint openings shall be adjusted according to Article 503.10(c) of the Standard Specifications when the deck is poured at an ambient temperature other than 50°F.

Sequence of Construction

1. Scarify and Resurface Existing Shoulders
2. Remove Stage I Areas
3. Perform Stage I Repairs and Overlay
4. Remove Stage II Areas
5. Perform Stage II Repairs and Overlay

Scope of Work

Scarify existing ±9" thick bituminous shoulders and resurface with bituminous shoulder.
Scarify existing bare deck
Partial depth deck patching
Eliminate drains within 10' of abutments
Microsilica Concrete Overlay
Expansion Joint Treatment

TOTAL BILL OF MATERIAL

ITEM	UNIT	TOTAL	0039	0040

PLAN

DESIGNED	TWH MAS
CHECKED	MAS
DRAWN	JH TEB
CHECKED	MAS

GENERAL NOTES

Plan dimensions and details relative to existing structure have been taken from existing plans and are subject to nominal construction variations. It shall be the Contractor's responsibility to verify such dimensions and details in the field and make necessary approved adjustments prior to construction or ordering of materials. Such variations shall not be cause for additional compensation for a change in the scope of the work, however, the Contractor will be paid for the quantity actually furnished at the unit price bid for the work.

Reinforcement bars shall conform to the requirements of AASHTO M-31, or M-322 Grade 60.

Existing reinforcement bars extending into the removal area shall be cleaned, straightened and incorporated into the new construction. Any reinforcement bars that are damaged during concrete removal shall be replaced with an approved bar splicer or anchorage system. Cost included with Concrete Removal.

The existing structural steel coating contains lead. The Contractor should take appropriate precautions to deal with the presence of lead on this project.

Existing structural steel that will be in contact with new structural steel shall be cleaned and painted prior to erection as required by the Special Provision "Cleaning and Painting Contact Surface Areas of Existing Steel Structures."

The inorganic zinc rich primer / Acrylic / Acrylic Paint System shall be used for shop and field painting of new structural steel except where otherwise noted. The color of the Acrylic finish coat shall be Interstate Green, Munsell # 7.5G 4/8. See Special Provision for "Cleaning and Painting New Metal Structures".

Joint openings shall be adjusted according to Article 503.10(c) of the Standard Specifications when the deck is poured at an ambient temperature other than 50 F.

All structural steel shall conform to AASHTO M270 Grade 36.

Sequence of Construction

1. Scarify and Resurface existing shoulders
2. Remove Stage I Areas
3. Perform Stage I Repairs and Overlay
4. Remove Stage II Areas
5. Perform Stage II Repairs and Overlay

Design Stresses

Field Units

New Construction

f'_c = 3,500 psi

f_y = 60,000 psi (reinforcement)

Existing Structure

f_c = 1,200 psi (hatchblock)

f_s = 20,000 psi (reinforcement)

Scope of Work

Scarify existing ±9" thick bituminous shoulders and resurface with bituminous shoulder.
Scarify existing bare deck
Partial depth deck patching
Eliminate drains within 10' of abutments and piers
Microsilica Concrete Overlay
Expansion Joint Treatment
Replace bearings at abutments and Pier 2
Extend drains

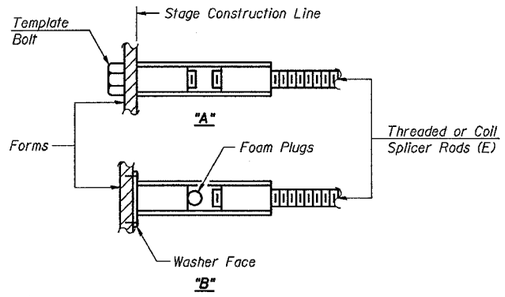
BAR SPLICER ASSEMBLY ALTERNATIVES

** Heavy Hex Nuts conforming to ASTM A 563, Grade C, D or DH may be used.



INSTALLATION AND SETTING METHODS

"A" : Set bar splicer assembly by means of a template bolt.
"B" : Set bar splicer assembly by nailing to wood forms or cementing to steel forms.
(E) : Indicates epoxy coating.

NOTES

Bar splicer assemblies shall be of an approved type and shall develop in tension at least 125 percent of the yield strength of the lapped reinforcement bars.

Splicer rods shall be of minimum 60 ksi yield strength, threaded or coiled full length.

All reinforcement bars shall be lapped and tied to the splicer rods or dowel bars.

Bar splicer assemblies shall be epoxy coated according to the requirements for reinforcement bars.

Other systems of similar design may be submitted to the Engineer for approval. Approval shall be based on certified test results from an approved testing laboratory that the proposed bar splicer assembly satisfies the following requirements:

① Minimum Capacity (Tension in kips) = $1.25 \times f_y \times A_t$

② Minimum *Pull-out Strength (Tension in kips) = $1.25 \times fs_{allow} \times A_t$

Where f_y = Yield strength of lapped reinforcement bars in ksi.
fs_{allow} = Allowable tensile stress in lapped reinforcement bars in ksi (Service Load)
A_t = Tensile stress area of lapped reinforcement bars.
* = 28 day concrete

BAR SPLICER ASSEMBLIES

ILLINOIS COIL-LOCK ANCHOR BOLT

PLAN-COIL WIRE

MATERIALS FOR ILLINOIS COIL-LOCK ANCHOR BOLT

The anchor bolt shall be fabricated from cold drawn or hot finished seamless carbon steel mechanical tubing conforming to ASTM A 519, Grade 1026, CW and supplied with hexagonal nuts and cut washers.

The coil wire shall be made of any suitable soft steel wire.

The finished anchor bolt shall be cleaned of rust and other foreign materials and wrapped or packaged to prevent contamination until they are installed.

The epoxy grout shall be a two-component, epoxy resin bonding system conforming to ASTM C 881, Type I, Grade 1 and of a Class suitable for the temperature at installation.

INSTALLATION PROCEDURE for the ILLINOIS COIL-LOCK ANCHOR BOLT

1. With the coil wire in place, the bolt shall be inserted into the hole and turned clockwise to a snug fit in the hole. Nut and washer shall be placed on the bolt. The nut shall be tensioned until the steel base plates are held securely to the concrete bearing seat.
2. Epoxy grout shall be pumped through the zerk fitting with a pressure gun. Pumping shall continue until the epoxy overflows the hole around the bolt shank. After pumping is discontinued, excess epoxy shall be immediately wiped off.

ALTERNATE ANCHOR BOLTS

The Contractor may use, at his option, the capsule or the adhesive cartridge type anchor rods that have been previously tested and given a prior approval by the Department. The Contractor shall install these anchor rods in pre-drilled holes according to the manufacturer's recommendations and procedures.

The capsule or the adhesive cartridge type anchor rods shall be a two part system composed of:

1. A threaded rod stud with nut and washer of the type specified.
2. A sealed glass capsule or a sealed glass adhesive cartridge containing premeasured amounts of the adhesive chemical.

Location	Type
Abutments	A 307
Pier 2	A 307

ASTM F 1554 Grade 105, ASTM A 449 and AASHTO M 314 Grade 105 anchor bolts may be substituted for the anchor bolts shown above.

GENERAL NOTES

Holes in the masonry for anchor bolts shall be drilled through the base plates to the diameter and depth shown or according to the manufacturer's recommendation after beams or girders have been erected and adjusted.

Prior to setting the bolts, the holes shall be dry and all dust and loose particles shall be removed by the use of compressed air or vacuuming.

The anchor bolts, furnished and installed and including the epoxy grout or capsules shall not be paid for separately but shall be included in the unit bid price for "Furnishing and Erecting Structural Steel".

GENERAL NOTES

Plan dimensions and details relative to existing structure have been taken from existing plans and are subject to nominal construction variations. It shall be the Contractor's responsibility to verify such dimensions and details in the field and make necessary approved adjustments prior to construction or ordering of materials. Such variations shall not be cause for additional compensation for a change in the scope of the work, however, the Contractor will be paid for the quantity actually furnished at the unit price bid for the work.

Reinforcement bars shall conform to the requirements of AASHTO M-31 or M-322 Grade 60.

Existing reinforcement bars extending into the removal area shall be cleaned, straightened and incorporated into the construction. Any reinforcement bars that are damaged during concrete removal shall be replaced with an approved bar splicer or anchorage system. Cost included with Concrete Removal.

The existing structural steel coating contains lead. The Contractor should take appropriate precautions to deal with the presence of lead on this project.

Existing structural steel that will be in contact with new structural steel shall be cleaned and painted prior to erection as required by the Special Provision "Cleaning and Painting Contact Surface Areas of Existing Steel Structures".

Joint openings shall be adjusted according to Article 503.10(c) of the Standard Specifications when the deck is poured at an ambient temperature other than 50°F.

Scope of Work

Scarify existing ±9" thick bituminous shoulders and resurface with bituminous shoulders.
Scarify existing bare deck
Partial depth deck patching
Eliminate every other drain and drains within 10' of abutments and piers
Microsilica Concrete Overlay
Expansion Joint Treatment

GENERAL NOTES

Plan dimensions and details relative to existing structure have been taken from existing plans and are subject to nominal construction variations. It shall be the Contractor's responsibility to verify such dimensions and details in the field and make necessary approved adjustments prior to construction or ordering of materials. Such variations shall not be cause for additional compensation for a change in the scope of the work, however, the Contractor will be paid for the quantity actually furnished at the unit price bid for the work.

Reinforcement bars shall conform to the requirements of AASHTO M-31, or M-322 Grade 60.

Existing reinforcement bars extending into the removal area shall be cleaned, straightened and incorporated into the new construction. Any reinforcement bars that are damaged during concrete removal shall be replaced with an approved bar splicer or anchorage system. Cost included with Concrete Removal.

The existing structural steel coating contains lead. The Contractor should take appropriate precautions to deal with the presence of lead on this project.

Existing structural steel that will be in contact with new structural steel shall be cleaned and painted prior to erection as required by the Special Provision "Cleaning and Painting Contact Surface Areas of Existing Steel Structures".

The inorganic zinc rich primer / Acrylic / Acrylic Paint System shall be used for shop and field painting of new structural steel except where otherwise noted. The color of the Acrylic finish coat shall be Interstate Green, Munsell # 7.5G 4/8. See Special Provision for "Cleaning and Painting New Metal Structures".

Joint openings shall be adjusted according to Article 503.10(c) of the Standard Specifications when the deck is poured at an ambient temperature other than 50 F.

All structural steel shall conform to AASHTO M270 Grade 36.

Sequence of Construction

1. Scarify and Resurface Existing Shoulders
2. Remove Stage I Areas
3. Perform Stage I Repairs and Overlay
4. Remove Stage II Areas

Deck Slab Repair (Partial Depth)	Sq. Yd.	19	9.1	9.9

Notes: Deck sounding was performed in July 2003.

Quantities shown in the plans for patching are estimates. The Resident Engineer will determine final patch locations and quantities in the field before bridge deck patching operations begin.

The Resident Engineer will mark the plan view for the deck repairs to be incorporated in the as built plans.

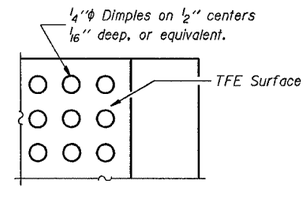
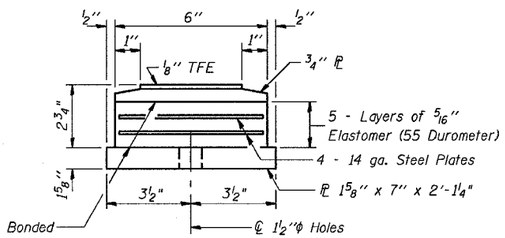
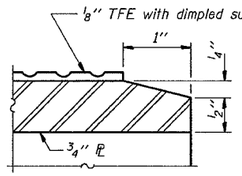
TOP BEARING ASSEMBLY



PLAN-TFE SURFACE



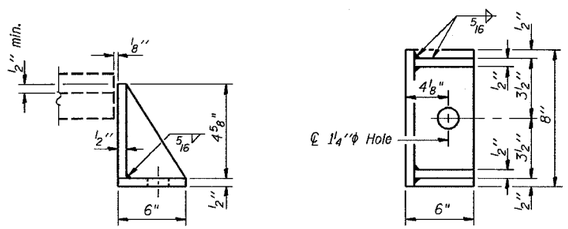
BOTTOM BEARING ASSEMBLY



SECTION THRU TFE

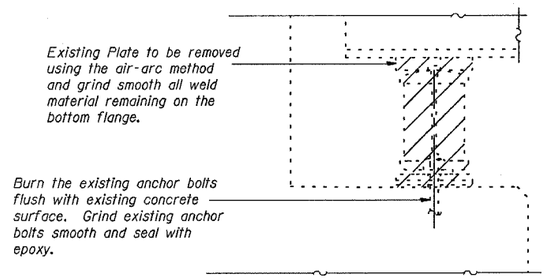
Note: The ⅛" TFE sheet shall be bonded directly to the top steel plate with a two-component, medium viscosity epoxy resin, conforming to the requirements of the Federal Specification MMM-A-134, Type I. The bond agent shall be applied on the full area of the contact surfaces.

Bonding of ⅛" TFE sheet during vulcanizing process will be permitted provided the process and method of adjusting assembly height is approved by the Engineer.



SIDE RETAINER

Equivalent rolled angle with stiffeners will be allowed in lieu of welded plates.



ABUTS

EXISTING BEARING REMOVAL DETAILS

Cost is included with Jack and Remove Existing Bearings

Notes: Diaphram removal and replacement may be required to facilitate drilling holes. Cost shall be included in the cost of Furnishing and Erecting Sturctural Steel.

New steel extensions, side retainers, shim ℄'s, connection bolts and anchor bolts are included in Furnishing and Erecting Structural Steel.

See Sheet 150 for Anchor Bolt installation.

Prior to ordering any material, the Contractor shall verify in the field all bearing height and shim thickness dimensions.

The minimum jack capacity required is 30 Tons.

ILLINOIS COIL-LOCK ANCHOR BOLT

PLAN-COIL WIRE

MATERIALS FOR ILLINOIS COIL-LOCK ANCHOR BOLT

The anchor bolt shall be fabricated from cold drawn or hot finished seamless carbon steel mechanical tubing conforming to ASTM A 519, Grade 1026, CW and supplied with hexagonal nuts and cut washers.

The coil wire shall be made of any suitable soft steel wire.

The finished anchor bolt shall be cleaned of rust and other foreign materials and wrapped or packaged to prevent contamination until they are installed.

The epoxy grout shall be a two-component, epoxy resin bonding system conforming to ASTM C 881, Type I, Grade 1 and of a Class suitable for the temperature at installation.

INSTALLATION PROCEDURE for the ILLINOIS COIL-LOCK ANCHOR BOLT

1. With the coil wire in place, the bolt shall be inserted into the hole and turned clockwise to a snug fit in the hole. Nut and washer shall be placed on the bolt. The nut shall be tensioned until the steel base plates are held securely to the concrete bearing seat.
2. Epoxy grout shall be pumped through the zerk fitting with a pressure gun. Pumping shall continue until the epoxy overflows the hole around the bolt shank. After pumping is discontinued, excess epoxy shall be immediately wiped off.

ALTERNATE ANCHOR BOLTS

The Contractor may use, at his option, the capsule or the adhesive cartridge type anchor rods that have been previously tested and given a prior approval by the Department. The Contractor shall install these anchor rods in pre-drilled holes according to the manufacturer's recommendations and procedures.

The capsule or the adhesive cartridge type anchor rods shall be a two part system composed of:

1. A threaded rod stud with nut and washer of the type specified.
2. A sealed glass capsule or a sealed glass adhesive cartridge containing premeasured amounts of the adhesive chemical.

Location	Type
Abutments	A 307
Pier	A 307

ASTM F 1554 Grade 105, ASTM A 449 and AASHTO M 314 Grade 105 anchor bolts may be substituted for the anchor bolts shown above.

GENERAL NOTES

Holes in the masonry for anchor bolts shall be drilled through the base plates to the diameter and depth shown or according to the manufacturer's recommendation after beams or girders have been erected and adjusted.

Prior to setting the bolts, the holes shall be dry and all dust and loose particles shall be removed by the use of compressed air or vacuuming.

The anchor bolts, furnished and installed and including the epoxy grout or capsules shall not be paid for separately but shall be included in the unit bid price for "Furnishing and Erecting Structural Steel".
