Revised 2/28/24

TEMPORARY CHAIN LINK FENCE (PORTABLE)

Description: This work shall consist of the erection of a minimum six foot high temporary chain link fence behind the temporary concrete barrier at locations shown on the plans or as directed by the Engineer. This work shall be performed in accordance with Section 664 of the Standard Specifications, except as modified herein. The purpose of this fence is to protect the public and direct pedestrian traffic around and away from the work zone.

The temporary chain link fence shall be mounted on stands or other such devices as approved by the Engineer so that the fence is portable and easily relocated as conditions change during construction. The individual fence panels shall be securely fastened together and the stands or other mounting devices shall be weighted with sandbags as necessary to prevent movement. The Contractor shall submit a catalog cut or details of the fence, mounting stands, hardware, and other appurtenances for approval by the Engineer.

This item shall also include any work necessary to remove and relocate fencing as shown on the plans or as directed by the Engineer for the purpose of staged construction at multiple worksite locations. Upon completion of the work, and when directed by the Engineer, the Contractor shall remove the fence from the site. Removal and relocation of the fence shall not be paid for separately but shall be included in the cost of this item.

Method of Measurement: Temporary Chain link fence (portable) will be measured in feet, along the top of posts from center to center of end posts.

Basis of Payment: This work shall be paid for at the contract unit price per foot for TEMPORARY CHAIN LINK FENCE (PORTABLE), which price shall include relocation and construction stage changes and removal of fence at the end of construction.

Added 2/28/24
