704001-03	TEMPORARY CONCRETE BARRIER
780001-01	TYPICAL PAVEMENT MARKINGS
781001-02	TYPICAL APPLICATIONS RAISED REFLECTIVE PAVEMENT MARKERS

GENERAL NOTES

1. THE STANDARDS AND REVISION NUMBERS SHALL APPLY TO THIS PROJECT.

2. ANY REFERENCE TO "BITUMINOUS CONCRETE" SHALL BE CONSTRUED TO DENOTE "HOT-MIX ASPHALT".

3. THE CONTRACTOR SHALL VERIFY ALL DIMENSIONS AND CONDITIONS IN THE FIELD PRIOR TO CONSTRUCTION AND ORDERING MATERIALS.

4. THE AGGREGATE SHOULDER WILL BE CONSTRUCTED AS SHOWN ON THE TYPICAL SECTION AS 6 INCH THICK AND ACCORDING TO SECTION 481 OF THE STANDARD SPECIFICATIONS. THE AGGREGATE SHOULDER TYPE B IS MEASURED FOR PAYMENT IN SQUARE YARDS WITH A MEASURED TOP SURFACE WIDTH OF 3 FEET. THE CONSTRUCTION OF THE AGGREGATE WEDGE BEYOND THE 3 FOOT WIDTH NECESSARY TO TIE INTO THE SIDE SLOPE WILL NOT BE PAID FOR SEPARATELY, BUT INCLUDED IN THE COST OF AGGREGATE SHOULDER, TYPE B, 6 INCH.

5. A QUANTITY OF 2290 FEET OF "TEMPORARY PAVEMENT MARKING - LINE 6" WHITE HAS BEEN INCLUDED IN THE PLANS FOR PAINTING THE BOTTOM 6" OF THE TEMPORARY CONCRETE BARRIER.

6. AN ADDITIONAL QUANTITY OF 32 SQ YD OF AGGREGATE BASE COURSE, TYPE B HAS BEEN INCLUDED IN THE PLANS FOR THE PURPOSE OF MAINTAINING ACCESS TO ENTRANCES DURING THEIR RECONSTRUCTION.

7. THE REMOVAL OF THE BRIDGE APPROACH PAVEMENT IS INCLUDED IN THE COST OF PAVEMENT REMOVAL.

8. ILLINOIS STATE LAW REQUIRES A 48-HOUR NOTICE BE GIVEN TO UTILITIES WITHIN THE PROJECT AREA BEFORE DIGGING BY CALLING J.U.L.I.E. AND BY NOTIFYING NON-J.U.L.I.E. MEMBERS INDIVIDUALLY. AGENCIES KNOWN TO HAVE FACILITIES WITHIN THE PROJECT AREA ARE AS FOLLOWS:

   - AT&T ILLINOIS
   - AMEREN IP
   - MONROE CO. ELECTRIC COOPERATIVE, INC.
   - VERIZON NORTH, INC.

   MEMBERS OF J.U.L.I.E (800) 892-0123 ARE INDICATED BY *. NON-MEMBERS MUST BE NOTIFIED INDIVIDUALLY.

9. NEW JERSEY (NJ) SHAPE BARRIER WILL BE ALLOWED ON THIS PROJECT. INSTALLATION SHALL BE AS DETAILED ON PAGE 21 OF THE PLANS.

GENERAL NOTES CONT'D

10. IF ANY SECTION OR SUB-SECTION MONUMENTS ARE ENCOUNTERED, THE ENGINEER SHALL BE NOTIFIED BEFORE SUCH MONUMENTS ARE REMOVED OR RESURFACED OVER. THE CONTRACTOR SHALL PROTECT AND CAREFULLY PRESERVE ALL PROPERTY MARKERS AND MONUMENTS UNTIL THE OWNER, AN AUTHORIZED SURVEYOR, OR AGENT HAS WITNESSED OR OTHERWISE REFERENCED THEIR LOCATION.

11. THE CONTRACTOR SHALL BE RESPONSIBLE FOR SEEDING, FERTILIZING, AND MULCHING ANY AREAS DISTURBED OUTSIDE THE LIMITS OF CONSTRUCTION. THE SEEDING SHALL BE CLASS 2. THE APPLICATION OF THE SEEDING, FERTILIZER, AND MULCH SHALL BE TO THE SATISFACTION OF THE ENGINEER. FINAL SEEDING SHALL BE PERFORMED AS SOON AS POSSIBLE.

12. IF THE CONTRACTOR REMOVES TREES WITHIN THE RIGHT-OF-WAY LIMITS FOR HIS CONSTRUCTION ACTIVITY, I.E. IN ORDER TO GAIN ACCESS TO THE PROJECT SITE, IT WILL BE HIS RESPONSIBILITY TO REPLACE THE TREES AT A 1:1 RATIO. THE TREES WILL BE REPLACED WITH A 1 GALLON NATIVE ILLINOIS TREE SPECIES AND SHALL BE APPROVED BY THE ENGINEER. THE TREE REMOVAL AND TREE REPLACEMENT WILL BE AT THE CONTRACTOR'S EXPENSE, AND NO ADDITIONAL COMPENSATION WILL BE ALLOWED.

13. EXCAVATION ADJACENT TO THE EDGE OF PAVEMENT SHALL BE PROTECTED WITH EXTENDED LEG BARRICADES AND APPROPRIATE STEADY BURN LIGHTS.

14. RIGHT OF WAY MARKERS SHALL BE SET SO THE BACK OF THE POST IS TWELVE INCHES (12") INSIDE THE RIGHT OF WAY BOUNDARY. RIGHT OF WAY PROPERTY CORNERS ARE MARKED BY A 5/8" IRON ROD WITH IDOT ALUMINUM CAP AND SHALL NOT BE REMOVED OR DAMAGED WHEN SETTING THE RIGHT OF WAY MARKERS.

EROSION AND SEDIMENT CONTROL GENERAL NOTES

1. ALL EROSION CONTROL PRODUCTS FURNISHED SHALL BE SPECIFICALLY RECOMMENDED BY THE MANUFACTURER FOR THE USE SPECIFIED IN THE EROSION CONTROL PLAN. PRIOR TO APPROVAL AND USE OF THE PRODUCT, THE CONTRACTOR SHALL SUBMIT TO THE ENGINEER A NOTARIZED CERTIFICATION BY THE PRODUCER STATING THE INTENDED USE OF THE PRODUCT AND THAT THE PHYSICAL PROPERTIES REQUIRED FOR THIS APPLICATION ARE MET OR EXCEEDED. THE CONTRACTOR SHALL PROVIDE MANUFACTURER RECOMMENDED INSTALLATION PROCEDURES TO FACILITATE THE ENGINEER IN CONSTRUCTION INSPECTION.

2. STRAW BALES, HAY BALES, PERIMETER EROSION BARRIER, AND SILT FENCES WILL NOT BE PERMITTED FOR TEMPORARY OR PERMANENT DITCH CHECKS. DITCH CHECKS SHALL BE COMPOSED OF AGGREGATE, SILT PANELS, ROLLED EXCELSIOR, URETHANE FOAM/GEOTEXTILE (SILT WEDGES), EARTH MEDIAN AND/OR OTHER MATERIAL APPROVED BY THE EROSION AND SEDIMENT CONTROL COORDINATOR.

3. TEMPORARY DITCH CHECK, GEOTEXTILES, ROLLED EXCELSIOR, SILT WEDGES, PANELS SHALL BE LOCATED AT EVERY 1.5 FT FALL/RISE IN DITCH GRADE.

4. TEMPORARY DITCH CHECKS, AGGREGATE USES GRADING NO. 3 - REMOVE AT END OF CONSTRUCTION.

5. TEMPORARY SEEDING SHALL BE COMPLETED ON A WEEKLY BASIS ON EXPOSED GROUND AND SHALL BE PAID FOR AS "TEMPORARY EROSION CONTROL SEEDING" AND NO OTHER PAYMENT WILL BE PERMITTED. FOR CALCULATION PURPOSES, THREE APPLICATIONS OF TEMPORARY SEEDING WAS ASSUMED.

6. ALL AREAS DISTURBED FOR ANY REASON SHALL BE SEEDED WITH CLASS 2 SEEDING AS DIRECTED BY THE ENGINEER.

7. CLASS 2 SEEDING AND EROSION CONTROL BLANKET IS TO BE PLACED AS SOON AS EARTHWORK IS COMPLETED.

8. EARTH STOCKPILES SHALL BE TEMPORARILY SEEDED IF THEY ARE TO REMAIN UNUSED FOR MORE THAN FOURTEEN DAYS

9. FINAL SEEDING SHALL BE PERFORMED AS SOON AS POSSIBLE.

COMMITMENTS

1. THE EXISTING EARTHEN BERM ELEVATION SOUTH OF THE BRIDGE AND ON THE EAST SIDE OF THE CREEK SHALL BE MAINTAINED DURING AND AFTER CONSTRUCTION.

2. TREE FELLING SHOULD BE RESTRICTED TO THE DATES BETWEEN SEPTEMBER 30 AND APRIL 1 OF ANY YEAR, WHEN THE INDIANA BATS ARE NOT BREEDING (I.E. NOT OCCUPYING NURSERY TREES).

3. THE CONTRACTOR SHALL PROTECT THE WETLAND AND RESEED ALL DISTURB AREAS WITH RED TOP AT 10 LBS/ACRE.

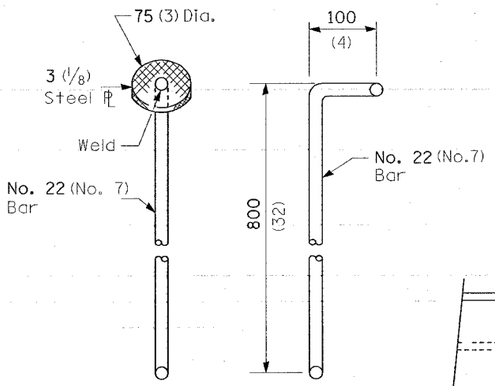
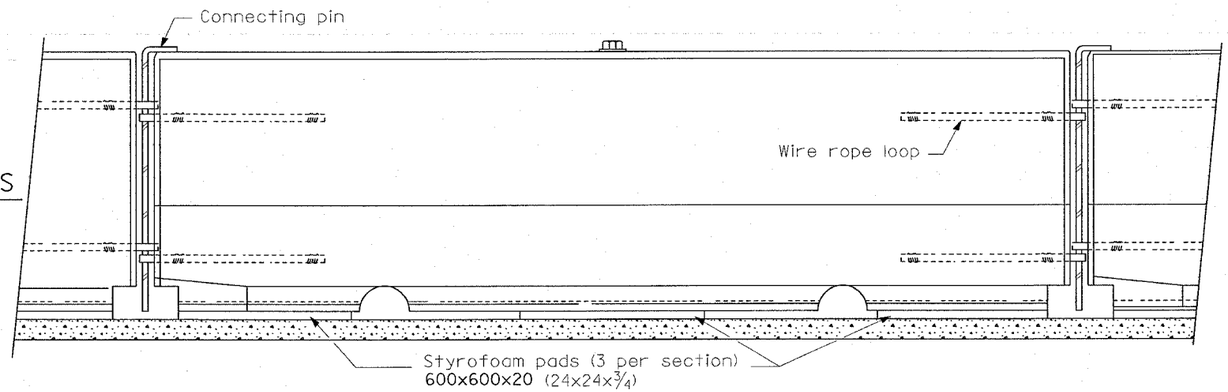
DOWEL BARS



ALTERNATE CONNECTING PINS



TYPICAL INSTALLATION WITH STYROFOAM PADS

NOTES:

New Jersey (NJ) shape barrier shall not be produced after October 1, 2002. However, New Jersey shape barrier produced prior to October 1, 2002 may be used until January 1, 2008.

The NJ shape barrier units shall be seated on styrofoam pads except when they are anchored.

NJ shape dowel bars shall be embedded at least 200 (8) into the pavement, and shall not project above the outer surface of the barrier. The connecting pin for the NJ shape pin and loop connection, may be either a plain 22 (7/8) diameter or a deformed No. 22 (No. 7) bar meeting the requirements of Article 1006.10(b) except Grade 400 (Grade 60) bars shall be used.

Bench Mark: Chiseled "□" N.W. corner of concrete slab for gaging station, Elev. 416.656

Existing Structure: S.N. 082-0089; Built in 1933 as S.B.I. Route 156, Section 106-B. Existing structure is a 4-span reinforced concrete T-beam superstructure on closed abutments and solid wall piers keyed into bedrock. The structure is 211'-10⅝" Bk. to Bk. abuts. The structure was widened in 1971 with 2 additional PPC-deck beams on each side to its current width of 35'-0" O. to O. of deck. Traffic to be maintained utilizing stage construction.

Contract No. 76129

SECTION THRU INTEGRAL ABUTMENT

* Included in the cost of Pipe Underdrains for Structures, 4".

Note:
All drainage system components shall extend to 2'-0" from the end of each wingwall except an outlet pipe shall extend until intersecting with the side slopes. The pipes shall drain into concrete headwalls. (See Article 601.05 of the Standard Specifications and Highway Standard 601101).

GENERAL NOTES

Fasteners shall be AASHTO M164 high strength bolts. Bolts $\frac{7}{8}$" ϕ, open holes $\frac{15}{16}$" ϕ, unless otherwise noted.

Calculated weight of Structural Steel = 268,830 pounds (AASHTO M270 Gr. 50)
= 24,430 pounds (AASHTO M270 Gr. 36)

Reinforcement bars shall conform to the requirements of IL Modified ASTM A706 Grade 60.

No field welding is permitted except as specified in the contract documents.

Layout of slope protection system may be varied in the field to suit ground conditions as directed by the Engineer.

Bearing seat surfaces shall be constructed or adjusted to the designated elevations within a tolerance of $\frac{1}{8}$" (0.01 ft). Adjustment shall be made either by grinding the surface or by shimming the bearings.

The inorganic zinc rich primer/Acrylic/Acrylic Paint system shall be used for shop and field painting of new structural steel except where otherwise noted. The color of the final finish coat for all interior steel surfaces shall be Gray, Munsell No. 5B 7/1. The color of the final finish coat for the exterior and bottom flange of the fascia beams shall be Gray, Munsell No. 5B 7/1. See Special Provisions for "Cleaning and Painting New Metal Structures".

The Structural Steel Bearing Plates of the Elastomeric Bearing Assembly shall conform to the requirements of AASHTO M270 Grade 50.

Reinforcement bars designated (E) shall be epoxy coated.

The Contractor shall drive test piles to 110% of the nominal required bearing specified in production locations at substructures specified or approved by the Engineer before ordering the remainder of piles.

In addition to all other requirements of Section 512 of the Standard Specifications, splices for HP12x53 piles shall develop the full capacity of the steel's cross sectional area of the pile for tension, shear and bending forces. One approved method of achieving this requirement is full penetration butt welding of the entire cross section. Other types of splices meeting the full capacity requirement may be allowed subject to the approval of the Engineer. Any proposal by the Contractor to use an alternate splice method must include adequate documentation demonstrating that the full tension, shear and bending capacities will be met. Appropriate welder qualifications will be required for the positions and processes used in splicing all piles. Nondestructive testing of completed welds will be limited to visual inspection.

Notes:
Hatched area indicates Removal of Existing Structures.
For quantity of Temporary Concrete Barriers, see Roadway Plans.
All staging sections are looking East.
If the Contractor chooses to alter the Temporary Cantilevered Sheet Piling design requirements shown on the plans at the West Abutment, a design submittal including plan details and calculations will be required for review and acceptance by the Engineer.
A Cantilevered Sheet Piling design does not appear feasible at the East Abutment and additional members or other retention systems may be necessary. The Contractor shall submit a Temporary Soil Retention System design including plan details and calculations for review and acceptance by the Engineer.

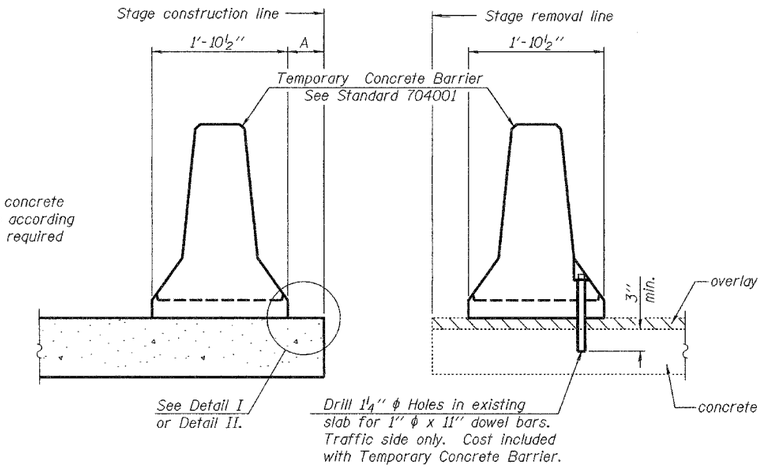
Contract No. 76129

When "A" is 3'-6" or less, the temporary concrete barrier shall be anchored to the new slab according to Detail I or Detail II. No anchorage is required when "A" is greater than 3'-6".



NEW SLAB EXISTING SLAB

SECTIONS THRU SLAB

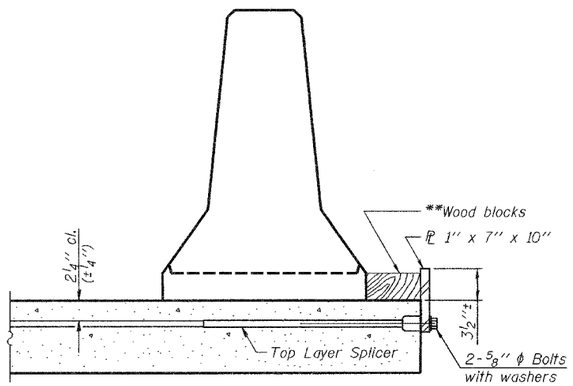
NOTES

Detail I - With Bar Splicer or Couplers:
Connect one (1) 1"x7"x10" steel ℙ to the top layer of couplers with 2-⅝" ϕ bolts screwed to coupler at approximate ℄ of each barrier panel.

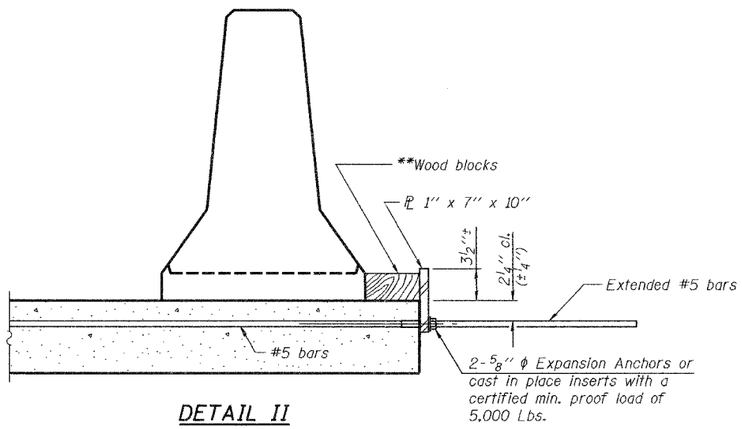
Detail II - With Extended Reinforcement Bars:
Connect one (1) 1"x7"x10" steel ℙ to the concrete slab with 2-⅝" ϕ Expansion Anchors or cast in place inserts spaced between the top layer of reinforcement at approximate ℄ of each barrier panel.

Cost of anchorage is included with Temporary Concrete Barrier.

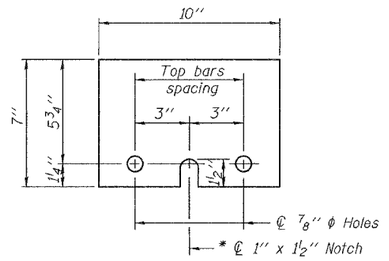
The 1" x 7" x 10" plate shall not be removed until stage II construction forms and all reinforcement bars are in place and the concrete is ready to be placed.



DETAIL I



DETAIL II



STEEL RETAINER ℙ 1" x 7" x 10"

* Required only with Detail II

** Wood blocks may be omitted when required to provide minimum stage traffic lane width. When the wood blocks are omitted, the concrete barrier shall be in direct contact with the steel retainer plate.

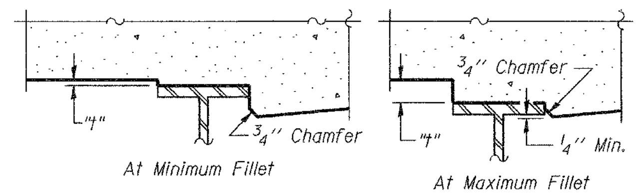
DEAD LOAD DEFLECTION DIAGRAM

(Includes weight of concrete only.)

Note: The above deflections are not to be used in the field if the engineer is working from the grade elevations adjusted for dead load deflections as shown on sheet 6 of 22.



To determine "t": After all structural steel has been erected, elevations of the top flanges of the beams shall be taken at intervals shown below. These elevations subtracted from the "Theoretical Grade Elevations Adjusted for Dead Load Deflection" shown on sheet 6 of 22, minus slab thickness, equals the fillet heights "t" above top flange of beams.

INTERIOR GIRDER REACTION TABLE			
		Abuts.	Piers
Rℓ	(k)	40.6	133.8
Rℓ	(k)	37.4	56.7
Imp.	(k)	8.9	13.0
R (Total)	(k)	86.9	203.5

Is and Ss are the moment of inertia and section modulus of the steel section used in computing fs (Total & Overload).

Ic(n) and Sc(n) are the moment of inertia and section modulus of the composite section used in computing stresses due to Live Load.

Ic(3n) and Sc(3n) are the moment of inertia and section modulus of the composite section used in computing stresses due to superimposed dead loads. (see AASHTO 10.38)

VR is the maximum Live Load + Impact shear range in span.

Ma (Applied Moment)=1.3[MQ + MsQ + 5/3(Mℓ + M(Imp))].

The Plastic Moment capacity (Mu) is computed according to AASHTO 10.48.1 and 10.50.1.1.

fs (Overload) is the sum of the stresses due to MQ + MsQ + 5/3(Mℓ + M(Imp)).

fs (Total) (Non-compact section) is the sum of the stresses due to 1.3[MQ + MsQ + 5/3(Mℓ + M(Imp))].

MQ - Moment due to dead loads on non-composite section.

MsQ - Moment due to dead loads on composite section.

Mℓ - Moment due to live load on non-composite or composite section.

M(Imp.) - Moment due to live load impact on non-composite or composite section.

PLAN-COIL WIRE

ILLINOIS COIL-LOCK ANCHOR BOLT

MATERIALS FOR ILLINOIS COIL-LOCK ANCHOR BOLT

The anchor bolt shall be fabricated from cold drawn or hot finished seamless carbon steel mechanical tubing conforming to ASTM A 519, Grade 1026, CW and supplied with hexagonal nuts and cut washers.

The coil wire shall be made of any suitable soft steel wire.

The finished anchor bolt shall be cleaned of rust and other foreign materials and wrapped or packaged to prevent contamination until they are installed.

The epoxy grout shall be a two-component, epoxy resin bonding system conforming to ASTM C 881, Type I, Grade 1 and of a Class suitable for the temperature at installation.

INSTALLATION PROCEDURE for the ILLINOIS COIL-LOCK ANCHOR BOLT

1. With the coil wire in place, the bolt shall be inserted into the hole and turned clockwise to a snug fit in the hole. Nut and washer shall be placed on the bolt. The nut shall be tensioned until the steel base plates are held securely to the concrete bearing seat.
2. Epoxy grout shall be pumped through the zerk fitting with a pressure gun. Pumping shall continue until the epoxy overflows the hole around the bolt shank. After pumping is discontinued, excess epoxy shall be immediately wiped off.

ALTERNATE ANCHOR BOLTS

The Contractor may use, at his option, the capsule or the adhesive cartridge type anchor rods that have been previously tested and given a prior approval by the Department. The Contractor shall install these anchor rods in pre-drilled holes according to the manufacturer's recommendations and procedures.

The capsule or the adhesive cartridge type anchor rods shall be a two part system composed of:

1. A threaded rod stud with nut and washer of the type specified.
2. A sealed glass capsule or a sealed glass adhesive cartridge containing premeasured amounts of the adhesive chemical.

Location	Type
Abuts.	A325
Piers	A325

ASTM F 1554 Grade 105, ASTM A 449 and AASHTO M 314 Grade 105 anchor bolts may be substituted for the anchor bolts shown above.

GENERAL NOTES

Holes in the masonry for anchor bolts shall be drilled through the base plates to the diameter and depth shown or according to the manufacturer's recommendation after beams or girders have been erected and adjusted.

Prior to setting the bolts, the holes shall be dry and all dust and loose particles shall be removed by the use of compressed air or vacuuming.

The anchor bolts, furnished and installed and including the epoxy grout or capsules shall be paid for as anchor bolts with diameter specified in the table below.

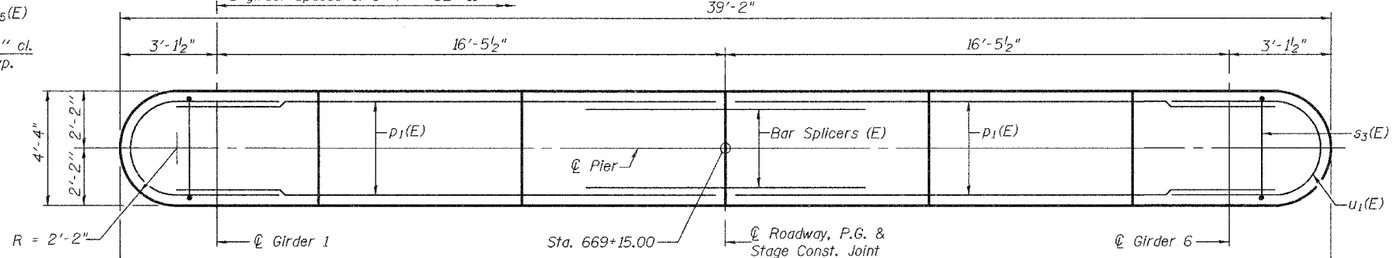
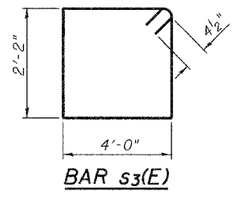
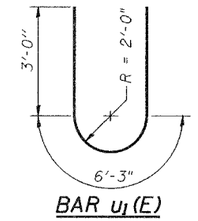
SECTION D-D



TOP PLAN



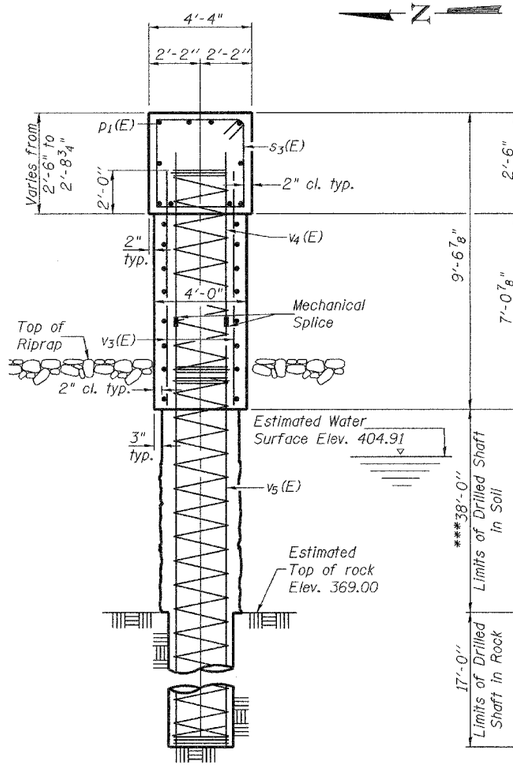
BAR s3(E)



BAR u1(E)

***If the prevailing water surface elevation during construction is consistently different than estimated on the plans, the contractor may propose an adjustment to the top of the drilled shaft elevation as part of their installation procedure. The top of all drilled shafts within a substructure unit shall be constructed to the same elevation and extend above the prevailing water surface. The quantities and reinforcement detailing are based on the top of shaft and the estimated elevations shown and may change based on the actual elevations encountered at each shaft and the final top of shaft elevation.

****Allowable Substitution: Provide 1½ extra turns top and bottom with 135° standard hook into core at ends of spiral.



SECTION C-C

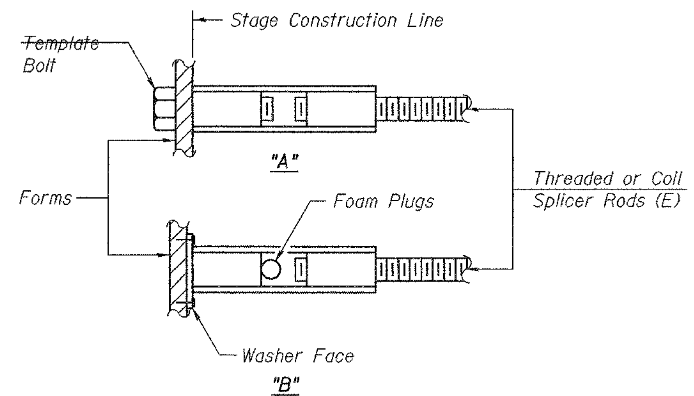
BAR SPLICER ASSEMBLY ALTERNATIVES

** Heavy Hex Nuts conforming to ASTM A 563, Grade C, D or DH may be used.



INSTALLATION AND SETTING METHODS

"A" : Set bar splicer assembly by means of a template bolt.
"B" : Set bar splicer assembly by nailing to wood forms or cementing to steel forms.
(E) : Indicates epoxy coating.

NOTES

Bar splicer assemblies shall be of an approved type and shall develop in tension at least 125 percent of the yield strength of the lapped reinforcement bars.

Splicer rods shall be of minimum 60 ksi yield strength, threaded or coiled full length.

All reinforcement bars shall be lapped and tied to the splicer rods or dowel bars.

Bar splicer assemblies shall be epoxy coated according to the requirements for reinforcement bars.

Other systems of similar design may be submitted to the Engineer for approval. Approval shall be based on certified test results from an approved testing laboratory that the proposed bar splicer assembly satisfies the following requirements:

① Minimum Capacity (Tension in kips) $= 1.25 \times fy \times A_t$

② Minimum *Pull-out Strength (Tension in kips) $= 0.66 \times fy \times A_t$

Where fy = Yield strength of lapped reinforcement bars in ksi.
A_t = Tensile stress area of lapped reinforcement bars.
* = 28 day concrete

ANCHOR DEVICE
NOTES
Hollow structural steel tubing shall conform to the requirements of ASTM designation A-501 "Hot Formed Welded and Seamless Carbon Steel Structural Tubing."
All other steel shapes and plates shall conform to the requirements of AASHTO designation M-183 except posts shall conform to AASHTO M-183
Bolts, cap screws, and nuts shall conform to the requirement of ASTM designation A-307 except for high strength bolts, nuts and washers noted which shall conform to AASHTO designation [illegible].
All bolts, nuts, cap screws, washers and lock washers shall be galvanized in accordance with AASHTO designation [illegible].
All posts, railing, rail splices, anchor devices and angles shall be galvanized after shop fabrication in accordance with [illegible]. Galvanized rail shall not be painted.
Railing shall be in accordance with Section 508 of the Standard Specifications, except as noted, and shall be paid for at the contract unit price per lineal foot for STEEL RAILING, TYPE N
All field drilled holes shall be coated with an approved zinc rich paint before erection.
The lower portion of the post flange in contact with concrete shall receive two coats of asphalt paint conforming to Section 714.08 Type B or place 1/8" fabric bearing pad between the post and concrete.
The 3/4"ø high strength bolts used to connect the 6x4x3/4 angles to the post shall be tightened in accordance with Article 710.11 of the Standard Specifications. The 1"ø high strength bolts connecting the angles to the concrete beam shall be tightened to a snug fit and given an additional 1/8 turn.
For multi-span bridges, sufficient 1/8"x6"x1'-4" galvanized steel shims shall be provided to align rail between adjacent spans. Cost incidental to Steel Railing.

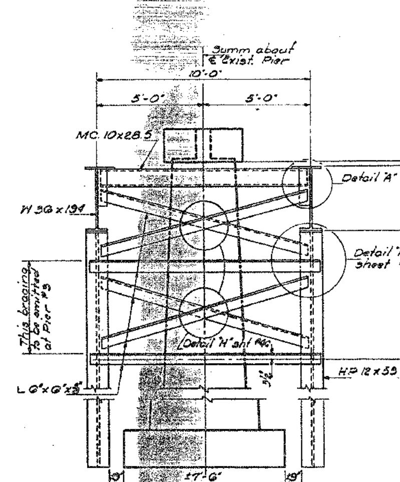
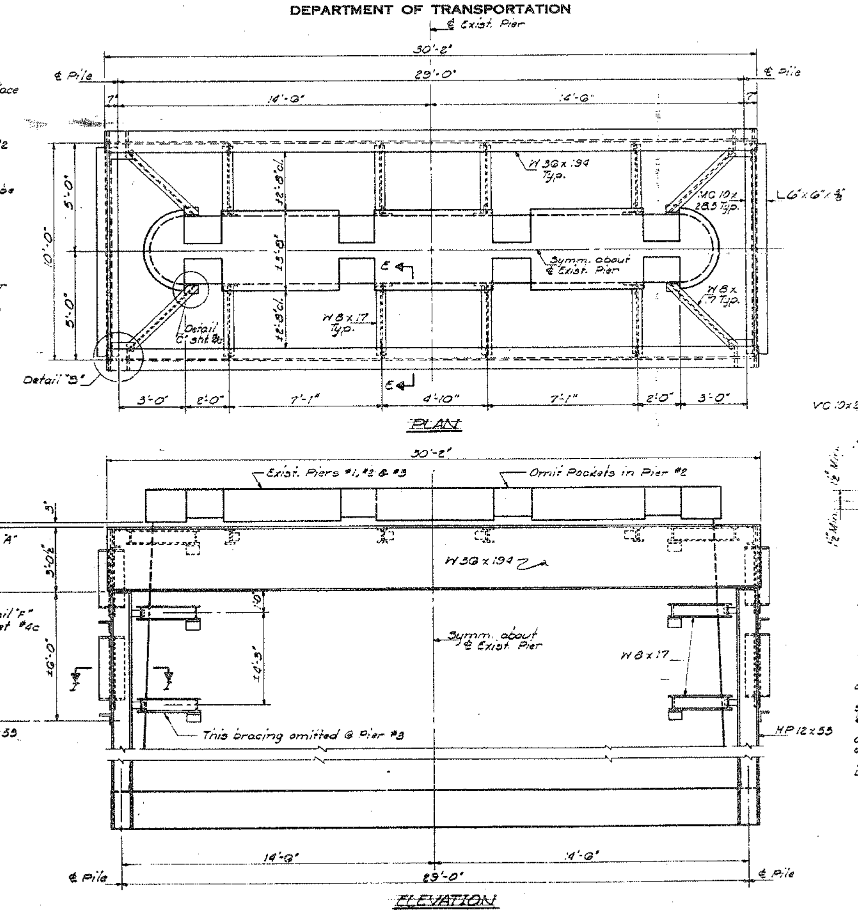
JACKING PROCEDURE

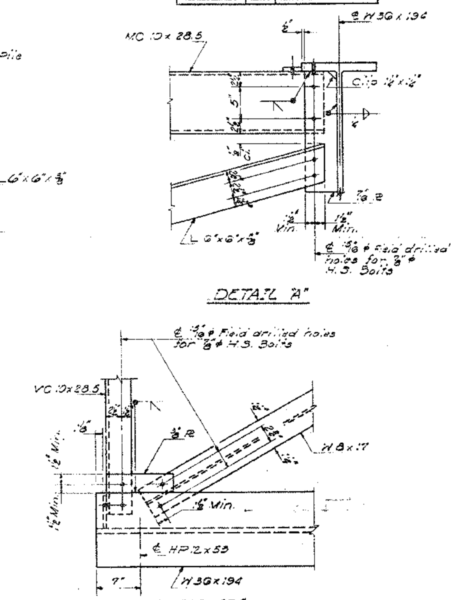
1. Place temporary barricades on ℄ Rdwy. and divert all traffic to South traffic lane.
2. Jack the two beams on the North side at Piers #1, #2 & #3. They shall be lifted only enough to be able to remove the bearings. The two beams on the South side shall remain on the bearings. Avoid excessive lifting in order to prevent slab damage.
3. Repair and reposition bearings and *remove & replace unsound concrete from beam ends. Repair Pier #2 cap as needed.
4. Place two North beams on bearings and divert all traffic to North traffic lane.
5. Jack the two beams on the South side at Piers #1, #2 & #3. Follow same procedure as above for South side beams.
6. If for some reason all four beams ends at any given location must be jacked, the bridge must be closed to traffic to avoid damage to beam overhang.
7. Jack capacity = 50 Tons (Min.) for single beam end.

* If extensive beam end removal is required so that more than 60 in² of bearing area on the existing top bearing plate at Pier #1 or #3 is lost, or less than 30 in² of bearing is remaining at Pier #2, then beam end repair must be done according to detail "Extensive Beam End Repairs" shown on sheet #5b.

STATE OF ILLINOIS
DEPARTMENT OF TRANSPORTATION







Note:
All bolts shall be ¾"⌀ H.S. Bolts unless otherwise noted.
All edge distances for bolts shall be 1½" Min. unless otherwise noted.
A jack safety system subject to the approval of the Engineer shall be used to prevent the structure from falling more than ¼" should the jack plunger fail.
A bearing plate 1"x10"x10" shall be placed between the concrete beam surface and the jack during jacking operations.
Positive attachment of the jack to the W36x194 beam shall be provided.

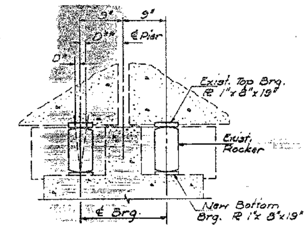
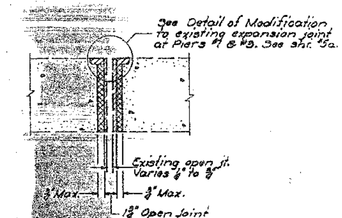
SHEET NO. 5b
6 SHEETS



SECTION THRU PIERS #1 & #3
(Showing Bearing Repair)

Notes:
Existing top bearing plates and rockers to be cleaned, repositioned, and painted. Existing bottom bearing plate to be replaced with new plate.
Repositioning shall be as follows:
D*(Side of brg. toward fixed brg.)
D* = ⅛ per each 100 ft. of expansion for every 15° fall below the normal temp. of 50°F.
D**(Side of brg. away from fixed brg.)
D** = ⅛ per each 100 ft. of expansion for every 15° rise above the normal temp. of 50°F.



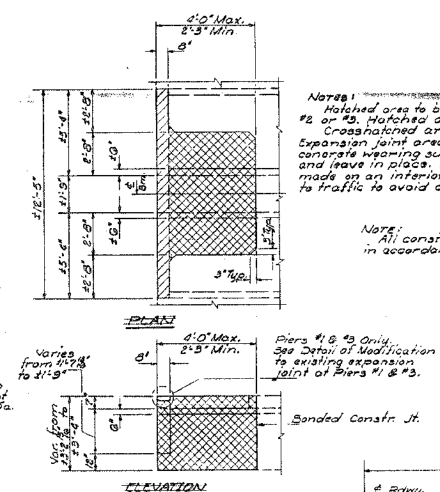
SECTION THRU BEAM ENDS AT PIER #3
(Showing increase in open joint.)

Hatched area to be removed and crosshatched area to be replaced with cement mortar at beam ends. Expansion Joint area to be poured monolithically with concrete wearing surface. Cement Mortar incidental to Class X Concrete.

BILL OF MATERIAL

ITEM	UNIT	TOTAL
Concrete Removal	Cu. Yds.	10
Class X Concrete	Cu. Yds.	9.5
Expansion Bolts (¾"φ)	Ea.	68

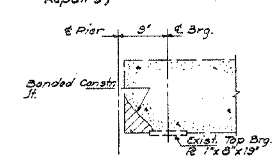
DESIGNED R. F. [illegible]
CHECKED [illegible]
DRAWN J. SCHNELLER
CHECKED [illegible]
EXAMINED Aug. 29, 1977
PASSED
APPROVED



Notes:
Hatched area to be removed as required at Piers #1, #2 or #3. Hatched area to be replaced at Pier #2.
Crosshatched area to be replaced at Piers #1 or #3. Expansion joint area to be poured monolithically with concrete wearing surface. Clean existing reinforcement and leave in place. If extensive repairs must be made on an interior beam, the Bridge must be closed to traffic to avoid damage to the slab.

Note:
All construction joints shall be bonded in accordance with Art. 504.13(a)2.

EXTENSIVE BEAM END REPAIRS
(Showing repair of beam ends requiring extensive removal) Do not use unless required as given in detail "Beam End Repairs")



BEAM END REPAIRS
(Showing replacement of unsound concrete)

Hatched area indicates broken or unsound concrete to be removed and replaced as required with concrete. If extensive beam end removal is required so that more than 60 in² of bearing area on the existing top bearing plate at Pier #1 or #3 is lost, or less than 30 in² of bearing area is remaining at Pier #2 or the Abutments, then Beam End Repair must be done according to detail "Extensive Beam End Repairs".

Notes: (Pier #2 & Abutments)
Additional areas of broken or unsound concrete in Pier #2 cap shall be removed and replaced as required. Cost incidental to Class X Concrete.
All cracks in sound concrete in existing Piers and Abutments shall be filled with epoxy grout. Cost incidental to Class X Concrete.
