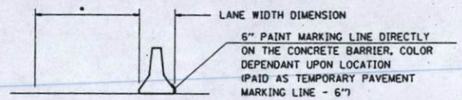
REFLECTORIZED PAVEMENT MARKING
SKIP-DASH DETAIL



TYPICAL MOUNTING DETAIL
FOR BARRIER WALL REFLECTOR

NOTES

1. ALL PAVEMENT MARKINGS FOR STAGE CONSTRUCTION SHALL BE PAINTED.

2. DELETED

3. PEAK HOURS IS DEFINED AS 6:00 AM TO 9:00 AM WESTBOUND AND 3:00 PM TO 6:00 PM EASTBOUND.

4. ANY ADDITIONAL SIGNAGE REQUIRED FOR ANY/ALL PHASES OF CONSTRUCTION THAT REQUIRE LANE CLOSURES SHALL BE INCLUDED IN THE LUMP SUM PAY ITEM FOR TRAFFIC CONTROL STANDARD 701401.

5. NO LANE CLOSURE BETWEEN NOVEMBER 30 AND MAY 1 UNLESS APPROVED BY THE ENGINEER.

6. AN ESTIMATED QUANTITY OF SEVEN (7) PORTABLE CHANGEABLE MESSAGE SIGNS HAS BEEN INCLUDED IN THE PLANS FOR ADVANCED NOTICE OF DETOURS AND RAMP CLOSURES. FOUR (4) OF THE CHANGEABLE MESSAGE SIGNS WILL BE LOCATED IN MISSOURI ON INTERSTATES 44,55,64, AND 70. TWO (2) CHANGEABLE MESSAGE SIGNS WILL BE LOCATED ON INTERSTATE 255 IN ILLINOIS. ONE (1) CHANGEABLE MESSAGE SIGN WILL BE PROVIDED FOR EACH STAGE OF CONSTRUCTION. THE EXACT LOCATIONS WILL BE DETERMINED BY THE ENGINEER.

7. STATE OWNED CONCRETE BARRIER IS LOCATED NEAR THE INTERSECTION OF IL ROUTE 111 AND FAI 55/70. THE CONTRACTOR IS RESPONSIBLE FOR PICK UP AND RETURN OF STATE OWNED BARRIER.

8. SIGNS SHALL BE MOUNTED ON EXISTING TRUSS MEMBERS. SIGN TRUSS STRUCTURAL MEMBERS ARE NOT TO BE DRILLED, CUT OR OTHERWISE MODIFIED IN MOUNTING DETOUR SIGNS.

9. TAPERED END SECTION NO LONGER ALLOWED.

10. PAINT REMOVAL SHALL BE BY THE WATER-BLAST METHOD.

11. ONE-WAY TRAFFIC IN AND OUT OF ACCESS OPENINGS.

12. WARNING SIGNS READING "TRUCKS ENTERING AND LEAVING HIGHWAY" SHALL BE PLACED IN ADVANCE OF ACCESS OPENINGS.

13. BRIDGE DECK MICROSILICA CONCRETE OVERLAY SHALL REQUIRED THE DIRECT BOND METHOD.

14. IF ANY SECTION OR SUB-SECTION MONUMENTS ARE ENCOUNTERED, THE ENGINEER SHALL BE NOTIFIED BEFORE SUCH MONUMENTS ARE REMOVED OR DISTURBED. THE CONTRACTOR SHALL PROTECT AND CAREFULLY PRESERVE ALL PROPERTY MARKERS AND MONUMENTS UNTIL THE OWNER, AND AUTHORIZED SURVEYOR, OR AGENT HAS WITNESSED OR OTHERWISE REFERENCED THEIR LOCATION.

15. ILLINOIS STATE LAW REQUIRES A 48-HOUR NOTICE BE GIVEN TO ALL UTILITIES BEFORE DIGGING. FIELD MARKING OF FACILITIES MAY BE OBTAINED BY CONTACTING J.U.L.I.E. AT (800)-892-0123, OR FOR NON-MEMBERS, THE UTILITY COMPANY DIRECTLY.

16. ALL TEMPORARY PAVEMENT MARKINGS WILL BE PLACED IN SUCH A MANNER SO AS NOT TO INTERFERE WITH THE PLACEMENT OF PERMANENT PAVEMENT MARKINGS.

17. ANY TEMPORARY CONCRETE BARRIER UNITS SHALL BE ANCHORED TO THE PAVEMENT TO PREVENT OVERTURNING AND LATERAL DEFLECTIONS GREATER THAN THOSE OBTAINED DURING THE NCHRP TESTS.

18. THE APPROACH END(S) OF TEMPORARY BARRIER SHALL BE PROTECTED WITH NCHRP TEST LEVEL 3 APPROACH DEVICE SUCH AS A MULTIPLE ARRAY OF SAND FILLED PLASTIC BARRELS OR A TYPE 3, SPECIAL TERMINAL.

Benchmark: #26 Elev. 404.396 X-cut in N.W. corner of concrete abutment at center pier of Ill. Central R.R Bridge over Ill. Rte. 3.

Existing Structure: SN 082-0205 was built as F.A.I. Route 70 Section (82-3HVB-2R-1)-2 in 1970. The roadway is striped for two 12-foot lanes. The Superstructure consists of three-3 span continuous units with two welded steel plate girders, plate girder floor beams, rolled stringers, and non-composite R.C. slab, and one simple span with composite slab on rolled girders. The Substructure is R.C. piers on R.C. piles and one spill through abutment. Existing structure shall be rehabilitated with seismic retrofit and redundancy retrofit. Traffic shall be maintained during the rehabilitation.

Salvage: None

GENERAL NOTES

Plan dimensions and details relative to existing structure have been taken from existing plans and are subject to nominal construction variations. It shall be the Contractor's responsibility to verify such dimensions and details in the field and make necessary approved adjustments prior to construction or ordering of materials. Such variations shall not be cause for additional compensation for a change in the scope of the work, however, the Contractor shall be paid for the quantity actually furnished at the unit price for the work.

All transverse and longitudinal dimensions are measured horizontally. All dimensions are measured at a temperature of 50° F.

All existing operational electrical and I.T.S. equipment shall remain in operation during construction unless approved otherwise by the Engineer.

Reinforcement bars shall conform to the requirements of AASHTO M31, M42 or M53, Grade 60.

Unless noted otherwise, all new steel shall be AASHTO M270 Grade 50.

Calculated weight of Structural Steel (M270, Grade 70W) = 149,480 lbs.

Calculated weight of Structural Steel (M270, Grade 50) = 118,960 lbs.

Fasteners shall be high strength bolts.

All turnbuckles, clevises and pins shall be galvanized and capable of developing the ultimate strengths of the corresponding assemblies.

Field welding of construction accessories will not be permitted to beams or girders.

The inorganic zinc rich primer/acrylic/acrylic paint system shall be used for shop and field painting of new structural steel except where otherwise noted. The color of the final finish coat shall be Interstate Green, Munsell No. 7.5G/8. See Special Provision for "Cleaning and Painting New Metal Structures".

Existing structural steel that will be in contact with new structural steel shall be cleaned and painted prior to erection as required by the special provision "Cleaning And Painting Contact Surface Areas Of Existing Steel Structures".

All construction joints shall be bonded.

Prior to pouring the new concrete deck, all loose rust, loose mill scale, and other loose potentially detrimental foreign material shall be removed from the surfaces of the beams or girders in contact with concrete. The cost of this work will be included in the pay item covering removal of existing concrete. All heavy rust and other tightly adhered potentially detrimental foreign matter shall also be removed from the surfaces of the beams or girders in contact with concrete. Tightly adhered paint may remain unless otherwise noted. This removal shall be accomplished by methods that will not damage the steel. The cost of this work will be paid for according to Article 109.04.

All existing construction accessories welded to the top flange over the pier(s) between the quarter points of the beams or girders shall be removed. The remaining weld shall be ground smooth and inspected for cracks using magnetic particle testing. Any cracks that can not be removed by grinding approximately $\frac{1}{4}$ inch deep shall be indentified and reported to the Bureau of Bridges and Structures for further disposition. The cost of this work shall be paid for according to Article 109.04.

Expansion joint openings shall be adjusted according to Article 503.10(c) of the Standard Specifications when the deck is poured at an ambient temperature other than 50° F.

All web reinforcement plates and web splice plates shall conform to the Supplemental Requirements for Notch Toughness, Zone 2.

Existing reinforcement bars extending into the removal area shall be cleaned, straightened and incorporated into the new construction. Any reinforcement bars that are damaged during concrete removal shall be replaced with an approved bar splicer or anchorage system. Cost included with the applicable pay item for removal. [1]

SCOPE OF WORK

GENERAL:
The detailed drawings presented herein are for Roadway E - Structure Number 082-0205 in St. Clair County, Illinois. Work relating to Piers 017, 018, E1 through E8 and Abutment E9 and Spans 018 and E1 through E9 are included within this Scope. Work to be performed is associated with a Seismic Retrofit, a Fatigue and Redundancy Retrofit and General Rehabilitation of the Deck and Substructure.

SEISMIC RETROFIT:
1. Install Column Wraps at the following Piers:
017, 018, E1, E2, E3, E4, E5, E6, E7, E8
2. Install Tie Beam Confinement Plates at the following Piers:
018, E1, E4, E5, E7, E8
3. Remove Tie Beam at Pier E6
4. Remove and Replace Tie Beams at Pier 017
5. Install Cross Frame Connection Plates at Pier 017
6. Remove and Replace Pier Columns at 017 East and 017 West
7. Remove and Reinstall Bearings at Pier Columns 017 East (Span 017/Girder01 and Span 018/Girder E1) and 017 west (Span N7/Girder N2 and Span 018/Girder E2)
8. Install Cross Frame Assemblies (including Column Band Assemblies) at the following Piers: 017, 018, E1, E2, E3, E4, E5, E6, E7, E8
9. Install Bumper/Restrainer Assemblies at the following Piers:
017, 018, E1, E2, E3, E4, E5, E6, E7, E8
10. Install Bumper Plates at the following Piers:
017, 018, E1, E2, E3, E4, E5, E6, E7, E8
11. Install Slab-to-Floorbeam Connections at the following Piers/Abutments:
017, 018, E1, E2, E3, E4, E5, E6, E7, E8, E9
12. Remove Existing and Install New Bearings at the following Piers: E2, E8
13. Install Extensions to the following Abutments: E9
14. Perform Column Base Modifications (including Dowel Cutting and Fuse Bars) to the following Piers: E3, E6

1

FATIGUE AND REDUNDANCY RETROFIT:
1. Install Web Reinforcement Plates on the following Spans:
018E, E1, E2, E4 through E9
2. Perform Stiffener Intersection Modifications on the following Spans:
018E, E1, E2, E4 through E9

GENERAL REHABILITATION:
1. Perform Formed Concrete Repair on the following Piers/Abutments:
017, 018, E1, E2, E3, E4, E5, E6, E9
2. Perform a Type 2 Deck Rehabilitation (including Overlay Removal, Scarification and Installation of a Microsilica Concrete Overlay) on the following Spans:
018, E1 through E9
3. Remove and Replace Expansion Joints at the following Piers/Abutments:
017, E2, E3, E6, E9
4. Remove Existing Curbs and Barriers and Replace with New Parapets on the following Spans: 018E, E1, E2, E4 through E9
5. Perform Full or Partial Deck Repair on the following Spans:
018E, E1 through E4, E7, E8
6. Remove Existing Floor Drains on the following Spans:
018E, E1, E2, E4 through E9
7. Install New Scuppers or Drains on the following Spans:
018E, E1, E2, E3, E4, E6, E9

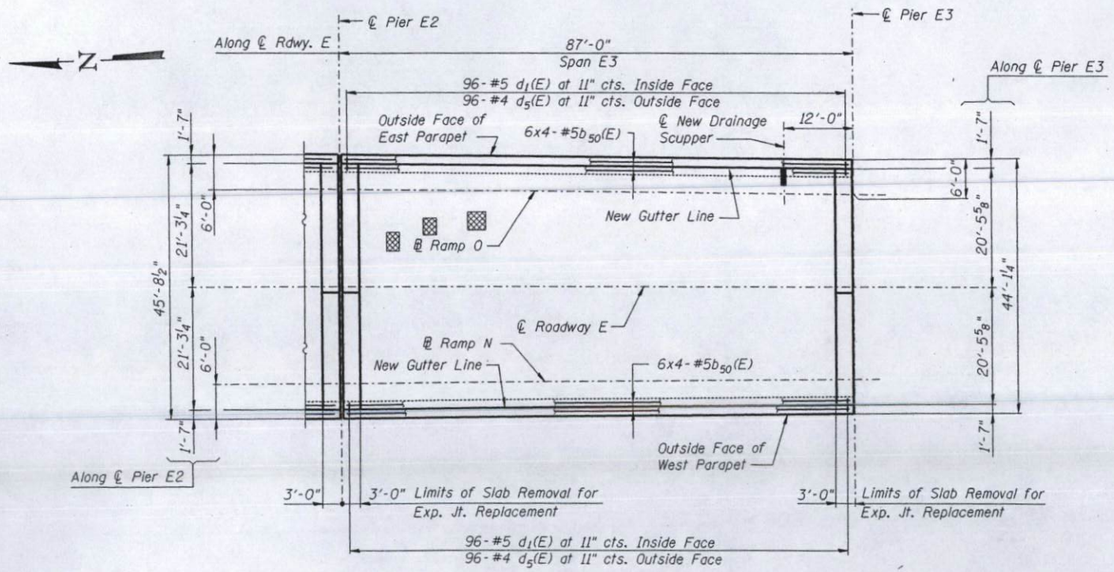
Spans E3-E4	5
Total	37

Areas requiring partial depth slab repair indicated thus: ▨ See Special Provisions.



PLAN

Note:
Areas of deck repairs shown are estimated. The Engineer shall show actual locations of deck repairs on As-Built Plans.

Date of Deck Survey - August, 2000.

NOTES

Lap splices:
#5 longitudinal bars 2'-7" min.

For Superstructure Bill of Material see Sheet 10.

For Parapet details, see Sheets 7 and 8.

For Drainage details, see Sheet 11.

For Expansion Joint details, see Sheet 13.

Bars indicated thus 6 x 7-#5 etc. indicates 6 lines of bars with 7 lengths per line.

Provide Full Depth Slab Repair at each Bridge Inspection Core Hole.

For Concrete Removal Details, see Sheet 10.

Additional #6 bars over piers shall be centered about centerline of pier.

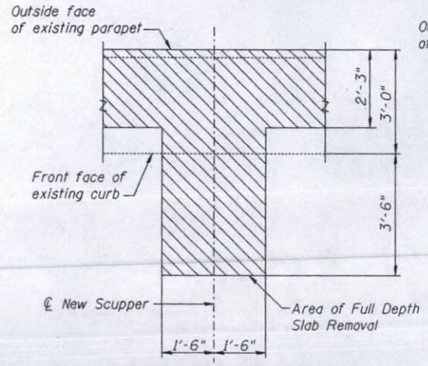
Reinforcement Bars, Epoxy Coated	Pound	69,040
Concrete Superstructure	Cu. Yd.	327
Concrete Removal	Cu. Yd.	437.1

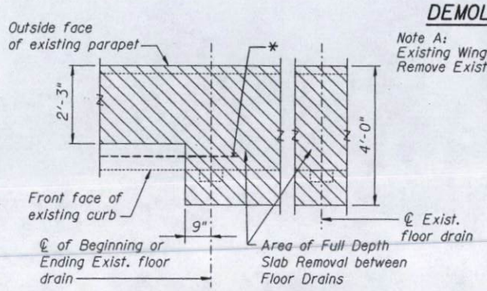
Reinforcement bars designated (E) shall be epoxy coated.



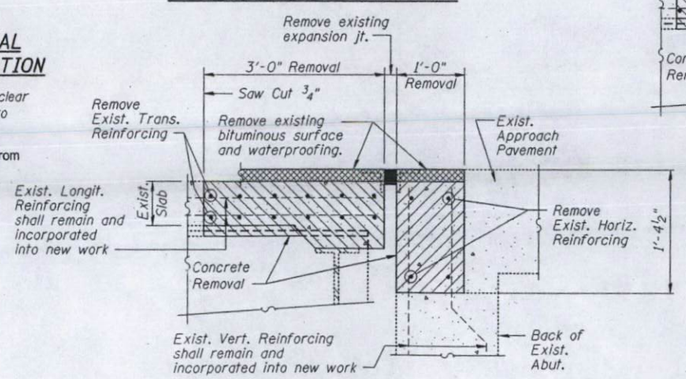
PLAN - SLAB REMOVAL AT NEW SCUPPER LOCATION

Note:
Existing transverse reinforcing shall be bent to clear New Scupper. Longitudinal reinforcing may be cut to accommodate New Scupper.

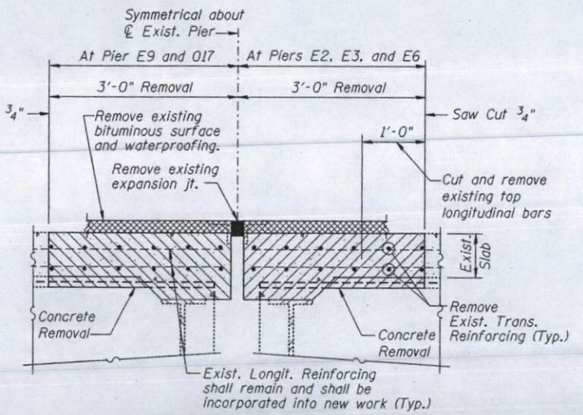
* Existing longitudinal reinforcement shall be cut off 3'-0" from removal line and lapped with new reinforcement.



PLAN - SLAB REMOVAL AT EXISTING FLOOR DRAINS



SECTION A-A



TYPICAL SECTION DEMOLITION AT EXPANSION JOINTS

NOTES

Existing reinforcement bars extending into the removal area shall be cleaned, straightened, and incorporated into the new construction. Any reinforcement bars that are damaged during concrete removal shall be replaced with an approved bar splicer or anchorage system. Cost included with "Concrete Removal".

Contractor shall provide and install a Temporary Slab Support as required. Temporary Slab Support shall be in place before deck removal. See Special Provisions.

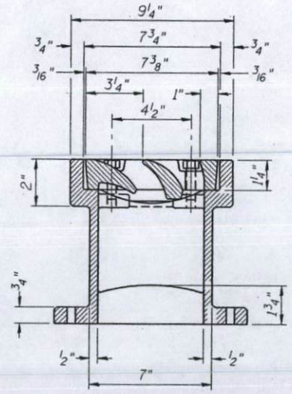
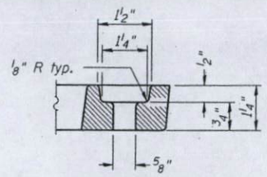
See sheet 11 of 33 for scupper location relative to parapet.



SECTION B-B



BOLT HOLE DETAIL

Notes: All cast iron parts shall be gray iron conforming to the requirements of AASHTO M 105, Class 35B.

Bolts, anchor studs, washers and nuts shall conform to the requirements of ASTM A 307 and shall be galvanized according to AASHTO M 232.

The grate, frame and downspout shall be galvanized according to AASHTO M 111 and ASTM A 385. Downspouts located on the exterior side of a painted steel fascia beam shall be painted with the finish coat specified for the exterior side of the fascia beam.

As an alternate, bolts, anchor studs, washers and nuts may be stainless steel according to Article 1006.29(d) of the Standard Specifications.

Structural steel weldments of equal sections and of the same configuration may be substituted for cast iron. Fillet or full penetration welds shall be used for the weldments. Details shall be submitted to the Engineer for approval.

The Contractor shall take apropriate measures to assure that Protective Coat is not applied to the scupper.

Cost of the Grate, Frame, Downspout, Anchor Studs, Bolts, Washers and Nuts including complete installation of the scupper shall be paid for at the contract unit price each for Drainage Scupper, DS-33.

2½"	2½"	1¾" Min.	2½"
4"	3"	2½" Min.	3"

INSTALLATION NOTES

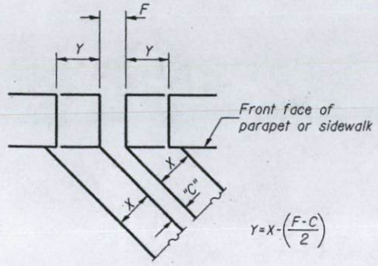
1. Install continuous seal in roadway, parapet, curb, and sidewalk.
2. Install anchor blocks as indicated.

NOTE A: Maximum spacing of anchor bolts shall be 12" centers.

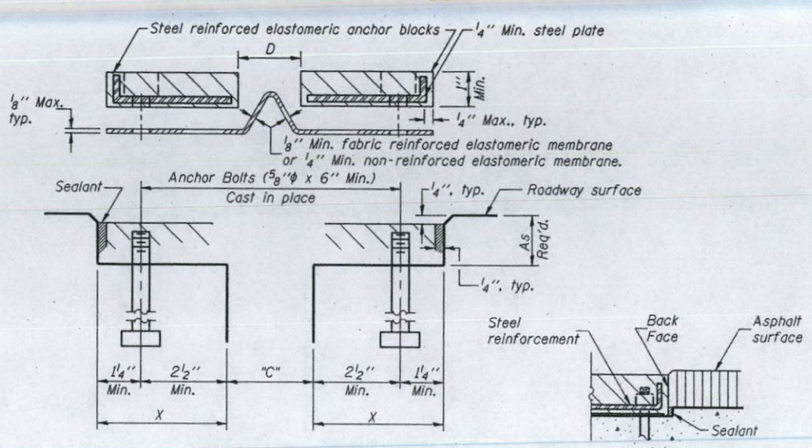
SKEW LIMITATIONS

The details of the anchor blocks and the elastomeric membrane in the parapet, as shown, are for up to 50° skews.

For skews greater than 50°, the anchor blocks and the elastomeric membrane, installed according to dimension "D", might require modifications to insure a minimum clearance of 1½" from centerline of anchor studs to edge of parapet opening. The anchor blocks and the elastomeric membrane shall also be installed to the top of the parapet with the anchor studs spaced at ±12" cts.



FORMING BLOCKOUT SKETCH



CROSS SECTION

ANCHOR BLOCK WITH ASPHALT SURFACE

GENERAL NOTES

Continuous Seal Neoprene Expansion Joint shall consist of molded anchor blocks of elastomer and steel, field assembled over continuous lengths of elastomeric membrane.

The elastomeric membrane shall be premolded with a single or a double upward convolution that will have a "memory" to return to its molded position upon joint closure.

The convolution length shall be such that the extended length will not be greater than the manufactured length when the joint is fully expanded in its design range and will not protrude above the anchor blocks when the joint is fully compressed.

Joint openings shall be adjusted according to Article 503.10(c) of the Standard Specifications when the deck is poured at an ambient temperature other than 50° F.

The parapet and roadway membrane shall be made continuous by an approved vulcanizing process. Lapping will not be permitted.

BEARING NOTES

1. The capacity of the jacks used to lift the bridge shall be at least 50% to 100% greater than the theoretical jacking loads shown in the table.
2. After jacking the structure off the bearing assembly, remove existing anchor bolt nuts and or any welded plate washers that secure the existing bearing assembly to the anchor bolt. Existing anchor bolts will not be re-used and may be cut-off just above the bearing plate to minimize the jacking height requirements.
3. All portions of existing bearing assemblies including bolsters, masonry plates and shims shall be removed and stored in such a manner as to prevent damage to the assembly. The bearing assemblies shall be stored in an area where they will will be protected from damage, dust and debris. The bearing assemblies will be reinstalled once the new column has cured a minimum of 7 days or as approved by the Engineer.
4. If required, top of new column concrete shall be leveled using an epoxy grout prior to bearing installation.
5. Use shims as required between top of leveled column and bottom of bearing assembly.
6. Use a new ⅛" lead plate or ½" fabric pad between the masonry plate or shims and top of concrete.
7. New anchor bolts shall be drilled and grouted into new concrete after bearings are in place.
8. Area between restrainer bars and elastomeric bearing to be filled with an Elastomeric Polymer type sealer, 1" thick, sloped to drain.

NOTES

1. For Formed Concrete Repairs, see Special Provisions.

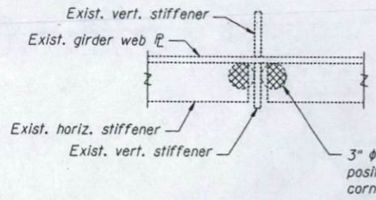
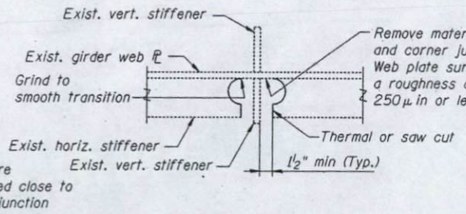
GIRDER ELEVATION - FRACTURE CONTROL MODIFICATION LOCATIONS

Exterior Face of Girder E1. shown. Exterior Face of Girder E2, Similar.



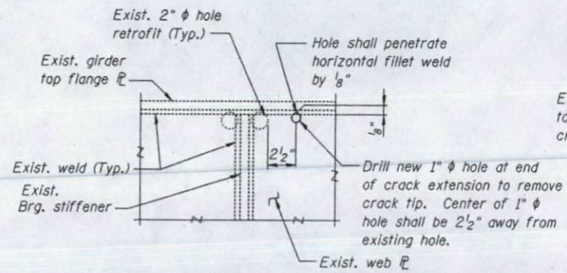


STIFFENER INTERSECTION MODIFICATION DETAILS

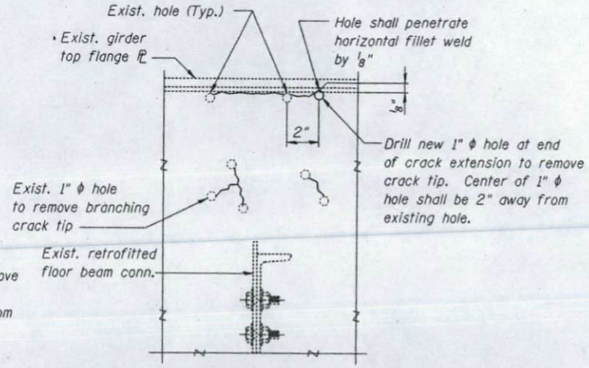
(Showing 2 locations)

Procedure:

1. Core 3" diameter hole positioned close to corner junction through ⅜" thick horizontal stiffener as shown in detail.
2. Remove material between core and intersection junction by grinding with carbide tool and a dye grinder as shown in details. Web plate surface shall have a roughness average (Ra) of 250μ in or less.
3. Remove all burrs from cut edge and check for irregularities. Cored surface shall have an Ra equal to 500μ in or less.
4. After burr removal the modification shall be inspected using liquid dye penetrant or magnetic particle (MT) inspection methods. Any cracks found shall be identified and reported to the Bureau of Bridges and Structures for further disposition.
5. The exposed steel surfaces shall be cleaned and painted using a aluminum epoxy mastic primer.
6. Obtain approval of Engineer before proceeding.
7. Paint area with top coat.



CRACK EXTENSION RETROFIT AT PIER



CRACK EXTENSION RETROFIT AT INTERIOR FLOOR BEAM

Procedure:

1. Inspect girder web plate in region of existing retrofits to determine location of crack extension and crack tip using liquid dye penetrant or magnetic particle (MT) inspection methods (Cost included with crack extension modifications).
2. Drill 1" diameter hole at end of crack extension to remove crack tip. Center of 1" diameter crack arrestor hole shall be positioned in accordance with detail.
3. Cored surfaces shall have a roughness average (Ra) of 500μ in or less.
4. Re-inspect area using liquid dye penetrant or magnetic particle (MT) methods to verify crack does not extend past the newly drilled holes (Cost included with crack extension modification).
5. Obtain approval of Engineer.
6. Clean exposed steel surfaces to remove contaminants and paint with aluminum epoxy mastic primer.

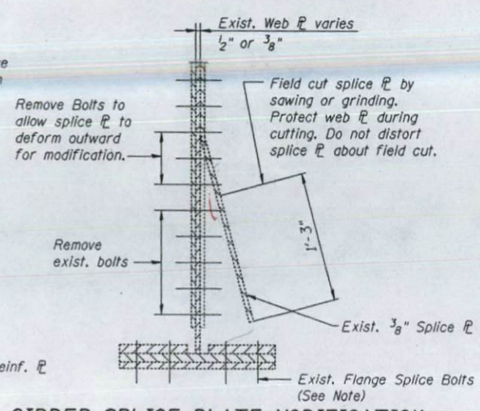
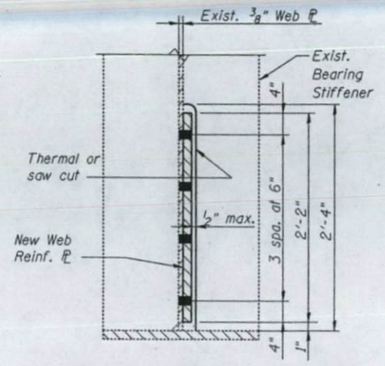
WEB REINFORCEMENT PLATE AT GIRDER WEB SPLICE

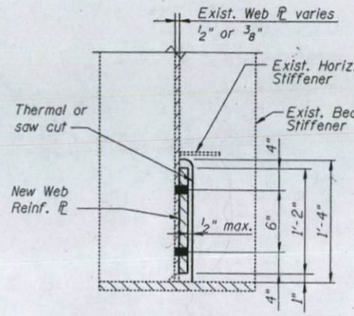


GIRDER SPLICE PLATE MODIFICATION

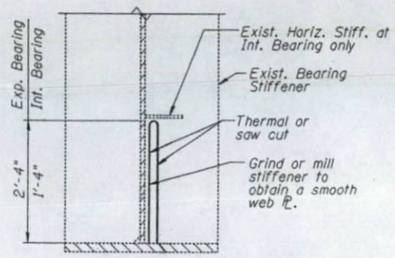
Note:
It is intended that the existing flange splice bolts remain in place during installation of the web reinforcement plate. If it is necessary to remove bolts to install web reinforcement plate, Contractor shall notify the Engineer and obtain approved sequence and procedure prior to proceeding.



TYPICAL SECTION THRU WEB REINFORCEMENT PLATE AT EXPANSION BEARING STIFFENER



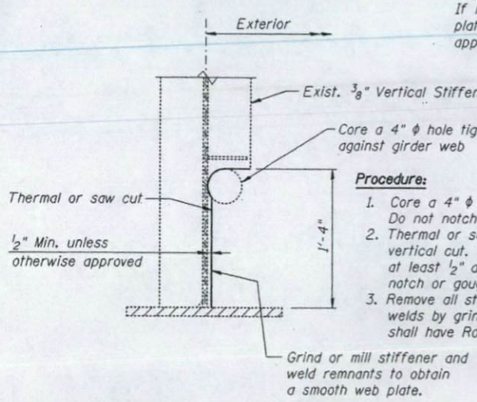
TYPICAL SECTION THRU WEB REINFORCEMENT PLATE AT INTERIOR BEARING STIFFENER



BEARING STIFFENER MODIFICATION

Procedure:

1. Thermal or saw cut horizontal cut and vertical cut. Vertical cut shall be positioned at least 1/2" away from girder web. Do not notch or gouge web plate.
2. Remove all stiffener remnants and connecting welds by grinding or by milling. Web plate surface shall have Roughness average (Ra) of 250 or less.



Procedure:

1. Core a 4" ϕ hole tight to girder web. Do not notch or gouge web plate.
2. Thermal or saw cut horizontal cut and vertical cut. Vertical cut shall be positioned at least 1/2" away from girder web. Do not notch or gouge web plate.
3. Remove all stiffener remnants and connecting welds by grinding or by milling. Web plate surface shall have Roughness average (Ra) of 250 or less.

SHIM NOTES

1. Shim ($\frac{1}{2}$" max.) higher flange so that elevation difference between ends of rod is no more than $\frac{1}{2}$". Use alternate connection plate when shims are insufficient.
2. Shim Plate length shall match the smaller length of the plates being shimmed, and shim plate width shall match the smaller width of the plates being shimmed.
3. Field verify shim requirements.

BUMPER/RESTRAINER NOTES

1. All bolt holes shall be standard round holes ($\phi + \frac{1}{16}$) Unless Noted Otherwise.
2. All bumpers and restrainer rod connection plates shall be centered on the existing girder.
3. The total length of the unthreaded portion of each restrainer rod assembly shall not be less than 1'-8".
4. Restrainer rods shall extend 0" min. to $\frac{3}{4}$" max. into clevis openings Unless Noted Otherwise.
5. The cost of bumper/restrainer assemblies including shims shall be included in the Unit Price for "Furnishing and Erecting Structural Steel".

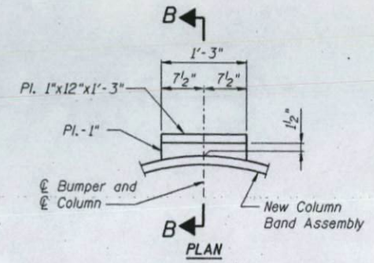
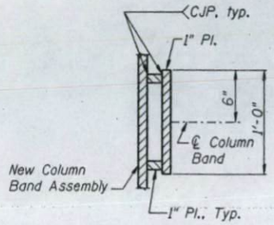
Note: Locate dowels between existing confinement bands as shown.

SECTION A-A



TYPE II BUMPER PLATE DETAIL



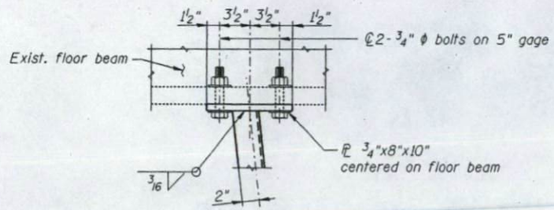
SECTION B-B

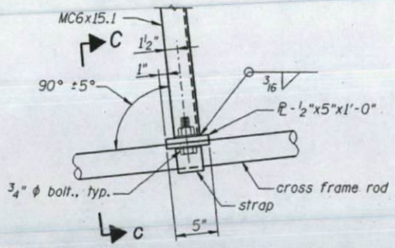
NOTE: If necessary, existing bands may be loosened and repositioned to eliminate interference between existing coupler and new bumper plate.

Loosened bands shall be reinstalled from bottom up. The repositioned bands shall be evenly spaced as possible and all shall be located within a spacing of 10" vertically. The top of the top band shall not be closer than 3¼" nor farther than 4" from the top of column.

The coupler bolts shall be tightened in 55 Ft.-Lbs increments in a clockwise direction to a final torque of 220 Ft.-Lbs.

All nut threads shall be full engaged upon final tightening. Peen confinement band threads to prevent loosening.





CROSS FRAME ROD SUPPORT DETAIL

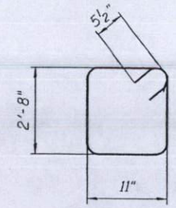
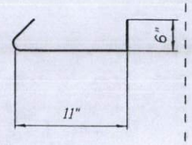
Reinforcement			Pound	1,735
Concrete			Cu. Yd.	5.6

Reinforcement Bars designated (E) shall be Epoxy Coated.



BAR s10(E)



BAR s11(E)

NOTES

1. Remove existing stay-in-place deck form and grind concrete smooth to provide uniform bearing.
2. Undercut Concrete Anchors shall have a bolt diameter of 0.827". Bolt Yield Stress of 93 ksi and Bolt Ultimate Stress of 116 ksi. Sleeve is to have a Cross Sectional Area of 0.346 sq. in. and an Ultimate Strength of 123 ksi and extend thru the connected steel item. Embedment is to be 5" into existing concrete slab. See Special Provisions for Expansion Bolts (Special).
3. The cost of the Slab to Floorbeam connection shall be included in the Unit Price for "Furnishing And Erecting Structural Steel".
4. The cost of Undercut Concrete Anchors shall be included in the Unit Price for Expansion Bolts (Special).
1 5. The cost of reinforcement bars, concrete and all other labor, equipment and materials necessary to construct the new tie beam shall be included in the Unit Price for Replace Tie Beam (Special).

NOTES

1. The contractor shall positively discern between column longitudinal reinforcing bars and foundation wall dowel bars prior to cutting any bars.
2. Cut number of foundation wall dowel bars indicated. To determine which bars to cut, see "SECTION THRU COLUMN", and cut bars sequentially starting with the number one. Dowel bars shall be cut within 2" of the top of the foundation wall.
3. Concrete repair shall be in accordance with the Special Provisions. Before repairing column, contractor shall replace all removed #4 stirrups with new #4 stirrups. All unsound concrete caused by modification shall be removed prior to concrete repair.
4. Only one column per pier may be modified at a time. Work on a successive column shall not start until the previous column base modification is complete and its wrapping is in place.
5. The cost of Concrete Removal and cutting existing dowel bars shall be paid at the Unit Price for "Foundation Wall Dowel Modification".
6. For New Column Wrap Details, see Sheet 43.
7. For New Tie Beam Details, see Sheet 41.
8. The cost of reinforcement bars, concrete and all other labor, equipment and materials necessay to construct the new columns shall be included in the Unit Price for Remove and Replace Column (Special).

BOLSTER PLAN

BILL OF MATERIAL

Item	Unit	Total
Elastomeric Bearing Assembly Type II	Each	4

NOTES

Minimum Jack Capacity:

1. The capacity of the jacks used to lift the bridge shall be at least 50% to 100% greater than the theoretical jacking loads shown in the table.

Bearing Demolition:

1. After jacking the structure off the bearing assembly, remove existing anchor bolt nuts and/or any welded plate washers that secure the existing bearing assembly to the anchor bolt. Existing anchor bolts are to remain intact to a minimum projection of 4" above top of concrete. Contractor shall verify soundness of existing anchor bolts prior to installation of new bearing assembly. Regrout in place if necessary.
2. All portions of existing bearing assemblies, including bolsters, sole plates and shims, shall be removed.

Bearing Installation:

1. Bearings to be replaced are for both girders at locations shown.
2. If the portion of the bottom flange above the new bearing is bent, the flange should be straightened using continuous pressure applied to both faces of the plate simultaneously before installation of the new bearing.
3. Top of column concrete shall be leveled using an epoxy grout prior to bearing installation.
4. Shim as required between top of leveled column and bottom of bolster.
5. Existing grounding wires to be re-attached after bearing replacement is complete.
6. Cost of Bolster and Side Retainers shall be included in the Lump Sum of "Furnishing and Erecting Structural Steel".

SECTION

WATERPROOFING MEMBRANE REPAIR

(A) AFTER COLD MILLING, EXISTING BITUMINOUS MATERIAL TO BE REMOVED TO PERMIT REPAIR OF MEMBRANE. BITUMINOUS CONCRETE SURFACE COURSE, MIXTURE D, CLASS I SHALL BE PLACED PRIOR TO PLACEMENT OF NEW BITUMINOUS CONCRETE WEARING SURFACE. (COST TO BE INCLUDED IN THE CONTRACT UNIT PRICE FOR WATERPROOFING MEMBRANE REPAIR). SEE SPECIAL PROVISIONS FOR TEMPERATURE AND DENSITY REQUIREMENTS FOR INITIAL LIFT OF BITUMINOUS SURFACE COURSE OVER REPAIR AREAS.

(B) ALL PERIMETER EDGES SHALL RECEIVE A MINIMUM 8mm BEAD OF ISO n MASTIC.

EXISTING WEARING SURFACE CONSISTS OF A 13mm ASPHALT SAND SEAL LAYER AND A 38mm BITUMINOUS SURFACE COURSE. PROPOSED COLDMILLING WILL REMOVE 35mm UNIFORMLY ON THE ENTIRE BRIDGE DECK.

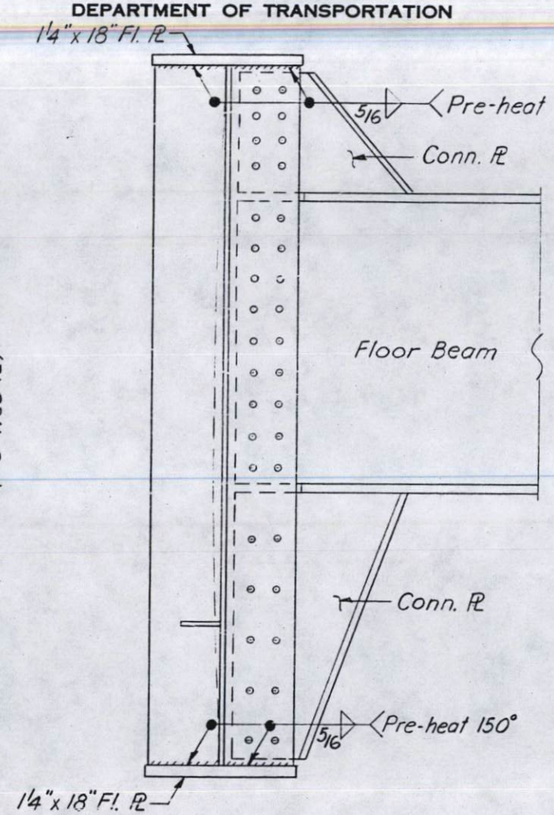
ELEVATION
WEST END PIER 7 - ROADWAY E

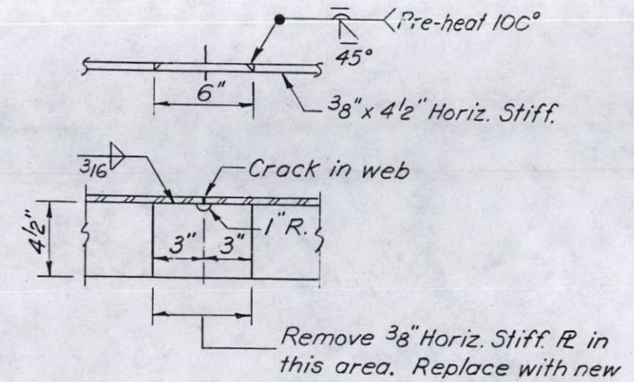
Provide temporary supports at each side of pier during repairs.

STATE OF ILLINOIS
DEPARTMENT OF TRANSPORTATION



SECTION

Note C:
1. Prepair the cracked web for single V groove weld.
2. Care must be exercised to minimize the warpping of the web plate while welding.
3. Preheat the web to 100°F.
4. Make sufficient 3"-4" intermittent welds to maintain the alignment of the web.
5. Weld the web together from one side, two passes minimum, starting from the bottom and alternating between the cracks on each side of bearing stiffener.
6. Back gouge the other side to sound metal and weld again.
7. Grind smooth both sides.



DETAIL A

REPAIR PROCEDURE:
Drill ¾"ϕ holes at bottom ends of crack. (Edge of hole may cut into web to flange weld ⅛" max.)
Remove 6" portion of horizontal stiff. at crack in web.
A — Loosen all bolts in bearing stiff. connection to a snug fit.
A — Push cracked portion of web into alignment with web.
A — Tighten bolts.
If cracked web can't be aligned as stated in A use procedure B.
B — Remove bolts in floor beam portion of connection only and replace with ⅝"ϕ H.S. bolts tightened to a snug fit.
B — Remove bolts in top and bottom connecting Pls.
B — Push cracked portion of web into alignment with web.
B — Ream holes in top & bott. conn. Pls if necessary and replace original bolts and tighten.
B — Remove ⅝"ϕ bolts from floor bm. conn., ream holes if necessary and replace original bolts and tighten.
Remove paint clean surfaces to be welded.
Weld bearing stiffener at top & bottom.
Weld crack in web. (See Note C)
Weld 6" plate in horizontal stiffeners.
Paint repaired areas to match.

TRAFFIC SHALL BE STOPPED WHILE WELDING

Procedure

1978

1. Restrict to one lane traffic.
2. Crib on both sides of bearing.
3. No construction traffic past centerline of bearing (one span only).
4. No tack welded construction accessories. (Remove and grind smooth any existing accessories.)
5. Field dr. 11 2 lines of 15/16"ø holes in girder web, 4" to the north and 3½" to the south of the face of exist. brg. stf. (Remove paint and clean all contact surfaces for new steel and bolts.)
6. Remove bolt line ② - See Section A-A - and install inside web splice ℄'s and Ls
7. Remove existing fascia bearing stiffener and horizontal stiffeners and grind web and flange areas smooth.
8. Using inside or outside web splice ℄'s as templates, bolt the 4' web ℄ to the girder.
9. Bolt bottom ¾" × 14" fill ℄ to bottom flange and bearing assembly.
10. Stop all traffic and weld new bearing stiffener to the top flange of the girder and to the ¾" bottom fill ℄ and bottom flange of girder.

GENERAL NOTES

1. Design criteria: A.A.S.H.T.O. Standard Specifications for Highway Bridges, 1983 Edition.
2. New fasteners shall be high-strength bolts, ⅞ inch ϕ, unless noted otherwise.
3. Plan conditions, dimensions, and details relative to the existing structure have been taken from existing plans and are subject to normal construction variations. It shall be the Contractor's responsibility to verify such conditions, dimensions, and details in the field, and make necessary approved adjustments prior to construction. Such variations shall not be cause for additional compensation for a change in scope of work. However, the Contractor will be paid for the quantity actually furnished at the unit price bid for the work.

MAJOR WORK ITEMS

1. Installation of structural steel repair Type I at bearing stiffener connections between floor beams above piers and main girders above piers at continuous supports.
2. Installation of structural steel repair Type 2 at non-bearing stiffener connections between first interior floor beams and main girders.
3. Removal and replacement of existing traffic signs and support brackets where they interfere with Type I repairs.
4. Cleaning and painting of connections between floor beams and main girder which have been previously retrofitted with trial repairs.
5. Provide traffic control and protection for repair locations which are located above another roadway.

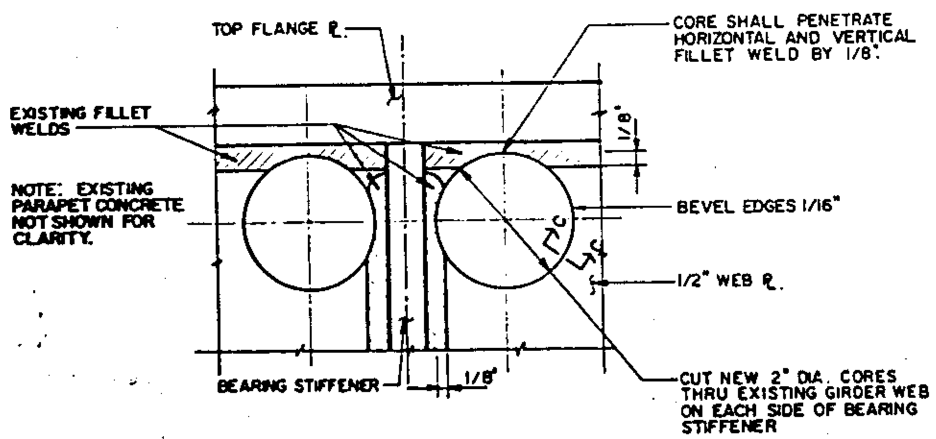
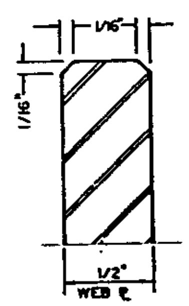
Note: Refer to Sheet Nos. 7 through 10 for repair detail locations.



DETAIL B



SECTION C

REPAIR PROCEDURE FOR INSTALLATION OF BEARING STIFFENER RETROFIT

1. Remove existing parapet concrete, as required, for equipment access.
2. Core 2 in. diameter holes through web plate adjacent to the top flange as positioned in Detail B. Core hole shall penetrate horizontal and vertical fillet welds approximately 1/8 in. If core does not penetrate weld by 1/8 in., remove additional material by grinding. Remove all burrs from core surface and surface shall have a Roughness average (Ra) of 500 or less. Bevel edges of cored holes 1/16".
3. Obtain approval of engineer before proceeding.
4. Clean surface to remove any cutting oils or contaminants.
5. Clean and paint all areas of existing structural steel affected by this repair process, in accordance with the Special Provisions.
6. Patch parapet concrete at the direction of the Engineer, in accordance with the Special Provisions.

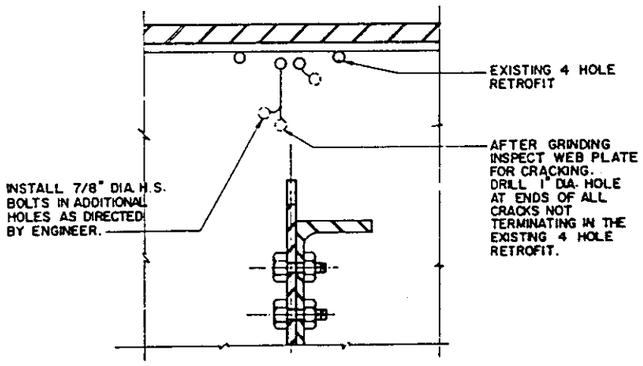
DETAIL C

Illustrating Steps 4 and 5 of the Repair Sequence



SECTION D

Illustrating Steps 6 thru 9 of the Repair Sequence

REPAIR PROCEDURE FOR INSTALLATION OF INTERIOR NON-BEARING STIFFENER RETROFIT:

1. Remove existing bolts between floor beam and connection plate that will interfere with coring operation. Core 4 in. diameter holes through the interior and exterior stiffeners as shown in Detail B.
2. Make horizontal flame cuts through knee brace and exterior stiffener as shown in Detail B. Refer to Special Provisions.
3. Make vertical flame cuts through the exterior stiffener and interior connection plate. These cuts shall be sufficiently away from the girder web to avoid gouging of the web plate. Also, utmost care shall be taken to not gouge the top flange plate during the cutting operation. Temperature of web plate shall not exceed 800° F. Refer to Special Provisions.
4. Grind surfaces immediately after flame cutting. Roughness of all flame cut surfaces shall be (Ra)1000 or less before leaving the location.
5. Remove remnants of vertical fillet welds and stiffener plates so that the web plate has a surface roughness of (Ra) 250 or less. The final grinding shall be done parallel to the flange. Refer to Special Provisions.
6. Inspect web plate in region of repairs. Drill 1" holes at ends of all cracks that do not terminate at an existing drilled hole.
7. Obtain approval of Engineer before proceeding.
8. Install 7/8" diameter high strength A325 bolts in crack retrofit holes as specified in the Special Provisions. Hardened washers shall be installed under both nut and bolt head. Tighten bolts to the minimum fastener tension, using the "turn-of-the-nut method", as specified in the AISC "Specification for Structural Joints Using ASTM A325 or A490 Bolts".
9. Clean exposed steel surface to remove any contaminants or rust.
10. Clean and paint all areas of existing Structural Steel affected by this repair process, in accordance with the Special Provisions.

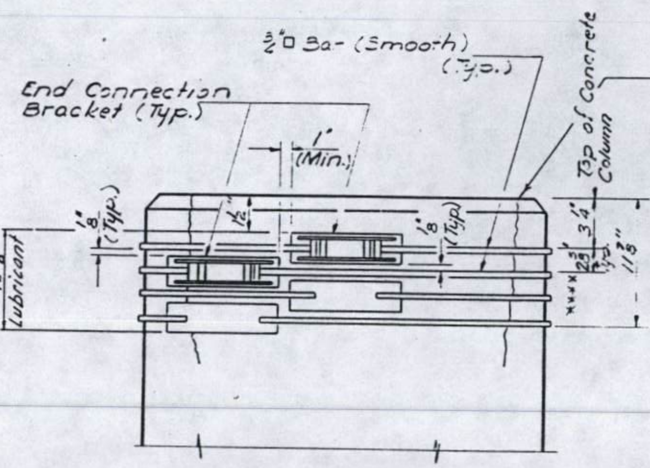
DETAIL "B"



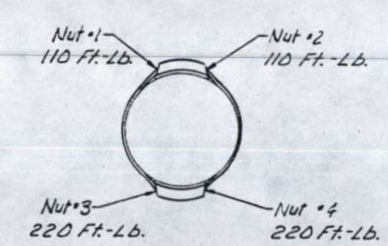
TOP OF PIER COLUMNS

For locations see Special Provisions

Clean and epoxy grout cracks before bar tensioning. See Special Provisions.

BAR TENSIONING PROCEDURE

The ¾"⌀ bars shall be tensioned in sequence from the bottom bar to the top bar. Each bar shall be tensioned by tightening the nuts to the given torques according to the following sequence:



After tightening all four nuts on a bar they shall all be checked for 220 Ft.-Lb. Torque according to the same above sequence. The Engineer shall then verify the 220 Ft.-Lb. torque on all the nuts and the threads shall be set.

QUANTITY OF STRUCTURAL STEEL PER COLUMN IN LBS.

COL. DIA.	AASHTO M-223	AISI 4140	TOTAL
4'-0"	118	96	214
4'-6"	118	108	226
5'-0"	118	120	238
5'-6"	118	132	250
6'-0"	118	144	262
6'-6"	118	156	274
7'-0"	117	168	285

All Structural Steel is incidental to "Pier Column Repair - Type I" or "Pier Column Repair - Type II" as applicable.

*** A petroleum base lubricant approved by the Engineer shall cover the entire surface area between the ¾"⌀ bars and the concrete surface. This shall be accomplished by placing lubricant on the concrete surface in the area shown around the entire circumference of the column.

**** The spacing of the Post Tensioning Bars shall be maintained throughout the perimeter of the columns, as shown, by using templates.

GENERAL NOTES

End Connection Bracket shall conform to the requirements of A.A.S.H.T.O. M223 Grade 50.

The ¾"⌀ bar shall conform to the requirements of AISI 4140, quenched and tempered to a minimum yield strength of 100,000 psi. and a maximum yield strength of 120,000 psi.

The hardened washer shall conform to the requirements of A.S.T.M. F-436.

The end connection brackets, ¾"⌀ bars, nuts and washers shall receive one shop coat of red lead paint and two shop coats of aluminum paint.

The ¾" hex. nut shall conform to the requirements of A.S.T.M. A-563, Grade DH.

Plan dimensions and details relative to existing structure have been taken from existing plans and are subject to nominal construction variations. It shall be the Contractor's responsibility to verify such dimensions and details in the field and make necessary approved adjustments prior to construction or ordering of materials. Such variations shall not be cause for additional compensation for a change in the scope of the work.

Concrete surfaces to receive Post-Tensioning System shall be smoothed by stoning or grinding as required to eliminate projections

The ¾" hex. nut shall conform to the requirements of A.S.T.M. A-563, Grade DH.

Plan dimensions and details relative to existing structure have been taken from existing plans and are subject to nominal construction variations. It shall be the Contractor's responsibility to verify such dimensions and details in the field and make necessary approved adjustments prior to construction or ordering of materials. Such variations shall not be cause for additional compensation for a change in the scope of the work.

MAINTENANCE

JUN 9 1978

To: E. J. Kehl Attn: E. G. Wheatley

From: Thomas R. Bright By: Carl E. Thunman, Jr.

Subject: Poplar Street Repairs

Date: May 26, 1978

FAI Route 70
Section 82-3HVB-R-1
St. Clair County

Attached for your use are four (4) sets of seven (7) sheets of procedures and details for the repair of the girder web at Pier E7, Roadway E, Poplar Street Complex

RJL:baa
cc/Attach.- Dale Klohr Attn: H. Ruffner

St. Clair Co.
82-3HVB-R-1

Procedure

1. Restrict to one lane traffic.
2. Crib on both sides of bearing.
3. No construction traffic past centerline of bearing (one span only
4. No tack welded construction accessories. (Remove and grind smooth any existing accessories.)
5. Field drill 2 lines of $15/16$"ϕ holes in girder web, 4" to the north and $3\frac{1}{2}$" to the south of the face of exist. brg. stif. (Remove paint and clean all contact surfaces for new steel and bolts.)
6. Remove bolt line (2) - See Section A-A - and install inside web splice ℄'s and L's
7. Remove existing fascia bearing stiffener and horizontal stiffeners and grind web and flange areas smooth.
8. Using inside or outside web splice ℄'s as templates, bolt the 4' web ℄ to the girder.
9. Bolt bottom $\frac{3}{4}$" x 14" fill ℄ to bottom flange and L.
10. Stop all traffic and weld new bearing stiffener to the top flange of the girder and to the $\frac{3}{4}$" bottom fill ℄ and bottom flange of girder

15/16" ϕ field drilled holes
subdrilled 7/8" ϕ and reamed to 15/16" ϕ
1" ϕ holes for 7/8" ϕ H.S. bolts in new steel
subpunched 7/8" ϕ
& reamed to 1" ϕ

PROJECT I-IG-70-1(79)0

ST. CLAIR COUNTY

FOR INDEX OF SHEETS, SEE SHEET NO. 3

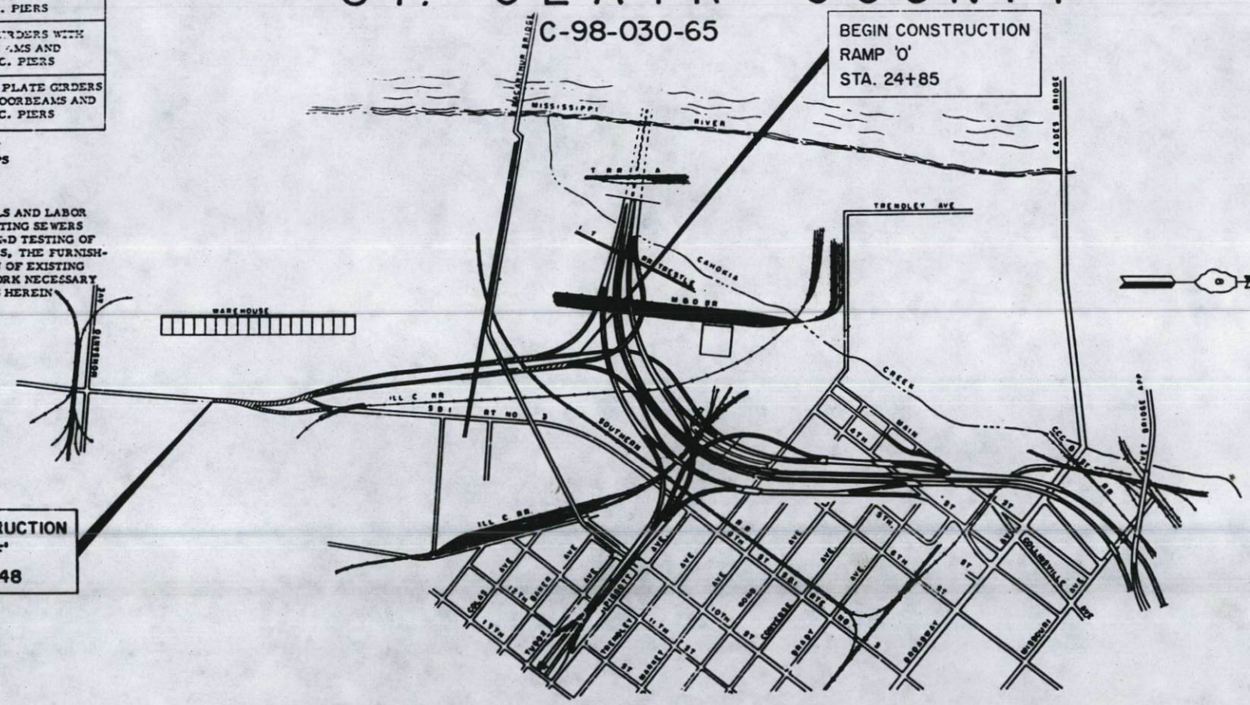
DESCRIPTION OF PROJECT:

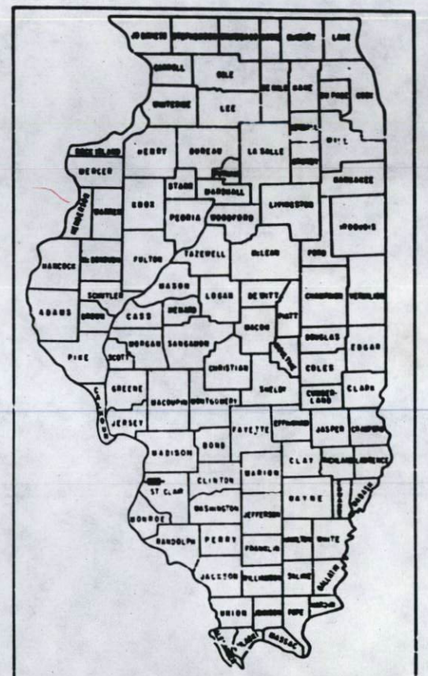
SECTION 82-3HVB-2 INCLUDES THE FURNISHING AND FABRICATING OF STRUCTURAL STEEL AND THE COMPLETE CONSTRUCTION OF THE FOLLOWING:

ROADWAY E	ONE-3 SPAN CONTINUOUS UNIT SPANS: 82'-105'-82'	WELDED PLATE GIRDERS WITH PLATE GIRDER FLOORBEAMS AND ROLLED STRINGERS ON R.C. PIERS
	TWO-3 SPAN CONTINUOUS UNIT SPANS: 1 @ 78'-100'-78' 1 @ 70'-89'-69'	WELDED PLATE GIRDERS WITH ROLLED FLOORBEAMS AND STRINGERS ON R.C. PIERS AND SPILL THRU ABUTMENT
	ONE-SIMPLE SPAN @ 85'	COMPOSITE WF ON R.C. PIERS
ROADWAY F	TWO-3 SPAN CONTINUOUS UNIT SPANS: 1 @ 76'-97'-75' 1 @ 75'-97'-75'	WELDED PLATE GIRDERS WITH ROLLED FLOORBEAMS AND STRINGERS ON R.C. PIERS AND SPILL THRU ABUTMENT
	TWO-3 SPAN CONTINUOUS UNIT SPANS: 1 @ 99'-128'-99' 1 @ 94'-122'-94'	CURVED WELDED PLATE GIRDERS WITH PLATE GIRDER FLOOR-BEAMS AND ROLLED STRINGERS ON R.C. PIERS
RAMP M	ONE-3 SPAN CONTINUOUS UNIT SPANS: 95'-125'-98'	CURVED WELDED PLATE GIRDERS WITH ROLLED FLOOR BEAMS AND STRINGERS ON R.C. PIERS
RAMP N	ONE-3 SPAN CONTINUOUS UNIT SPANS: 99'-125'-97'	CURVED WELDED PLATE GIRDERS WITH ROLLED FLOOR BEAMS AND STRINGER ON R.C. PIERS
RAMP O	ONE-3 SPAN CONTINUOUS UNIT SPANS: 93'-120'-93'	WELDED PLATE GIRDERS WITH ROLLED FLOORBEAMS AND STRINGERS ON R.C. PIERS
RAMP P	ONE-3 SPAN CONTINUOUS UNIT SPANS: 94'-119'-92'	CURVED WELDED PLATE GIRDERS WITH ROLLED FLOORBEAMS AND STRINGERS ON R.C. PIERS

THE POPLAR STREET BRIDGE APPROACHES FOR THIS SECTION CARRY THE FOLLOWING: ROADWAY E, ROADWAY F AND RAMPS M, N, O, P OVER THE TRACKS OF SOUTHERN R.R. AND UNDER THE RAILROAD AND HIGHWAY APPROACHES TO MAC ARTHUR BRIDGE.

THE WORK ALSO INCLUDES THE FURNISHING OF ALL MATERIALS AND LABOR NECESSARY TO COMPLETE THE GRADING, PAVING, CONSTRUCTING SEWERS AND DRAINAGE STRUCTURES, THE FURNISHING, INSTALLING AND TESTING OF COMPLETE HIGHWAY LIGHTING SYSTEMS AND TRAFFIC SIGNALS, THE FURNISHING AND ERECTING OF HIGHWAY SIGNS, THE RECONSTRUCTION OF EXISTING CITY STREETS, AND ALL APPURTENANT AND COLLATERAL WORK NECESSARY TO COMPLETE THE PROJECT AS SHOWN ON THE PLANS AND AS HEREIN SPECIFIED.





LOCATION OF SECTION INDICATED THUS:

INDEX OF SHEETS

* Includes Sheets 88A and 167A

** Includes sheet 80A

GENERAL NOTES

ALL ELEVATIONS REFER TO U. S. C. & G. S. MEAN SEA LEVEL DATUM.

REMOVE CROWN FOR SUPERELEVATED SECTIONS.

THE PROFILE GRADE LINE REFERS TO THE GRADE ELEVATION AT THE POINT SHOWN ON THE TYPICAL SECTIONS AND PLANS.

POSITIVE PROFILE GRADES ARE IN THE DIRECTION OF TRAFFIC AND HIGHER ELEVATIONS.

NEGATIVE PROFILE GRADES ARE IN THE DIRECTION OF TRAFFIC AND LOWER ELEVATIONS.

THE CONTRACTOR WILL BE REQUIRED TO SEED THE AREA BETWEEN RIGHT OF WAY LIMITS EXCEPT THE PAVED OR SODDED AREAS AND ANY OTHER AREAS AS DIRECTED BY THE ENGINEER. THE MEDIAN, THE PORTION OF THE SHOULDERS THAT IS NOT SURFACED AND ALL SLOPES 4:1 OR STEEPER WILL BE SEEDED.

VARIABLE WIDTH GUTTERS, CURBS AND FLAGS ARE REQUIRED AS SHOWN ON THE PLANS. ANY ADDITIONAL COST SHALL BE INCLUDED IN THE CONTRACT UNIT PRICE PER LINEAL FOOT FOR THE TYPE OF GUTTER OR CURB AND GUTTER SPECIFIED. NO ADDITIONAL COMPENSATION SHALL BE ALLOWED.

ALL EXPOSED EXISTING PAVEMENT SHALL BE REMOVED WITHIN THE LIMITS OF RIGHT OF WAY OR AS DIRECTED BY THE ENGINEER.

BUILDINGS WITHIN R. O. W. LIMITS HAVE BEEN REMOVED OR ARE IN THE PROCESS OF BEING REMOVED DOWN TO EXISTING GROUND LEVEL AND BASEMENTS BACKFILLED WITH BRICK OR MASONRY RUBBLE AND SAND TO FILL THE VOIDS.

TWO SIGNS (STANDARD 2151-7, 2150-5) TO BE CONSTRUCTED AT LOCATIONS INDICATED ON THE PLANS OR AS DIRECTED BY THE ENGINEER. (SHEET NO. 8)

ALL PAVEMENT DIMENSIONS ARE TO EDGE OF PAVEMENT UNLESS OTHERWISE NOTED.

GENERAL NOTES

ALL ELEVATIONS REFER TO U.S.G.S. MEAN SEA LEVEL DATUM.

REMOVE CROWN FOR SUPERELEVATED SECTIONS.

THE PROFILE GRADE LINE REFERS TO THE GRADE ELEVATION AT THE POINT SHOWN ON THE TYPICAL SECTIONS AND PLANS.

POSITIVE PROFILE GRADES ARE IN THE DIRECTION OF TRAFFIC AND HIGHER ELEVATIONS.

NEGATIVE PROFILE GRADES ARE IN THE DIRECTION OF TRAFFIC AND LOWER ELEVATIONS.

THE CONTRACTOR WILL BE REQUIRED TO SEED THE AREA BETWEEN RIGHT OF WAY LIMITS EXCEPT THE PAVED OR SODDED AREAS AND ANY OTHER AREAS AS DIRECTED BY THE ENGINEER. THE MEDIAN, THE PORTION OF THE SHOULDERS THAT IS NOT SURFACED AND ALL SLOPES 6:1 OR STEEPER WILL BE SODDED.

VARIABLE WIDTH GUTTERS, CURBS AND FLAGS ARE REQUIRED AS SHOWN ON THE PLANS. ANY ADDITIONAL COST SHALL BE INCLUDED IN THE CONTRACT UNIT PRICE PER LINEAL FOOT FOR THE TYPE OF GUTTER OR CURB AND GUTTER SPECIFIED. NO ADDITIONAL COMPENSATION SHALL BE ALLOWED.

ALL EXPOSED EXISTING PAVEMENT SHALL BE REMOVED WITHIN THE LIMITS OF RIGHT OF WAY OR AS DIRECTED BY THE ENGINEER.

BUILDINGS WITHIN R.O.W. LIMITS HAVE BEEN REMOVED OR ARE IN THE PROCESS OF BEING REMOVED DOWN TO EXISTING GROUND LEVEL AND BASEMENTS BACKFILLED WITH BRICK OR MASONRY RUBBLE AND SAND TO FILL THE VOIDS.

TWO SIGNS (STANDARD 2153-7, 2158-5) TO BE CONSTRUCTED AT LOCATIONS INDICATED ON THE PLANS OR AS DIRECTED BY THE ENGINEER. (SHEET NO. 8)

ALL PAVEMENT DIMENSIONS ARE TO EDGE OF PAVEMENT UNLESS OTHERWISE NOTED.

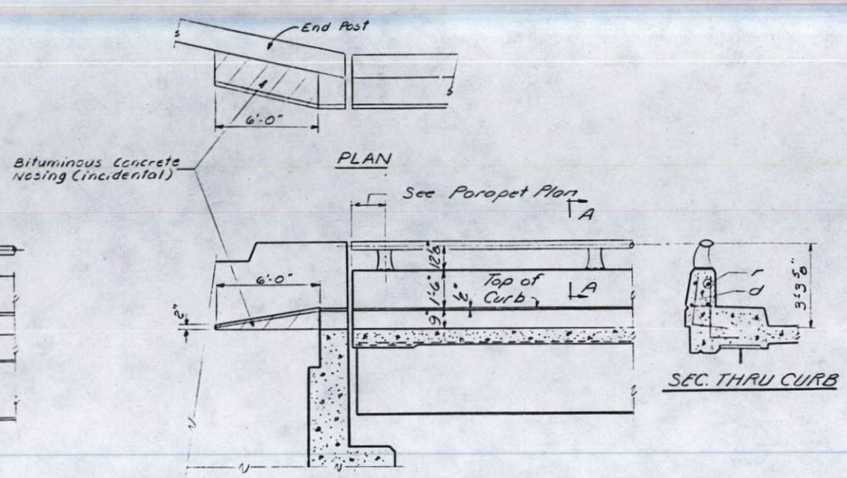
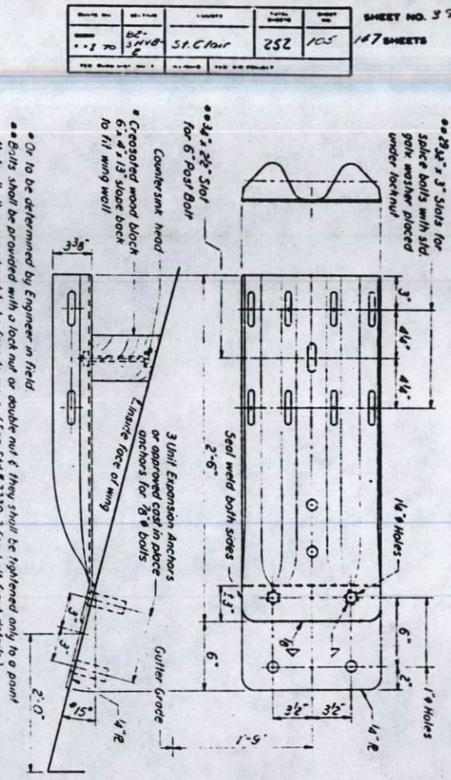
ELEVATION AT EXP. PIERS



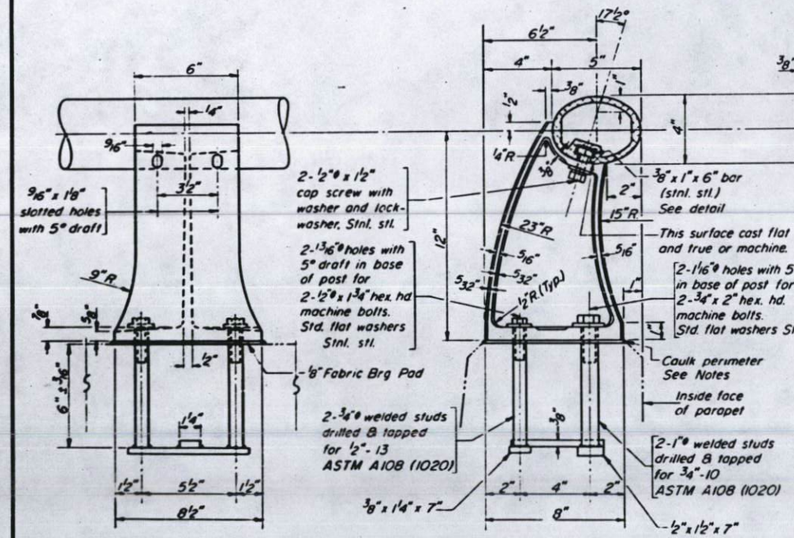
ELEVATION - END POST



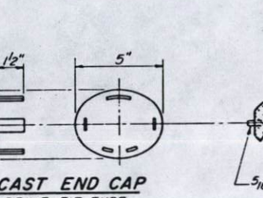
* Or to be determined by Engineer in field
** Bolts shall be provided with a lock nut or double nut & they shall be tightened only to a point that will allow guard rail to be free to move. (See Std # 2230.2 for bolt & nut details.)

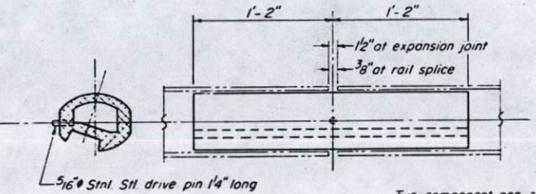
DETAIL OF GUARD RAIL CONNECTION

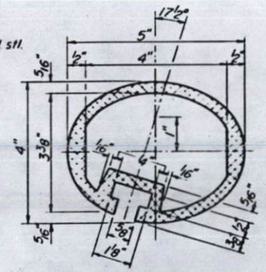
Guard Rail Connection shall be galvanized after fabrication in accordance with ASTM A-123 & A-385
Cost of connection, bolts and anchors are incidental to Bridge Contract



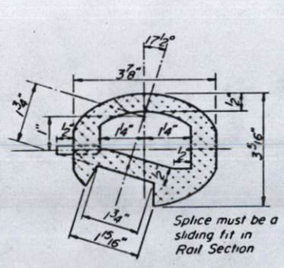
RAIL POST DETAILS







SEC. THRU ELLIPTICAL RAIL SECTION



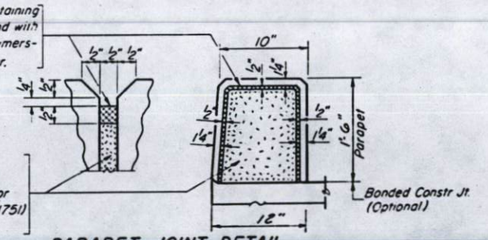
Splice must be a sliding fit in Rail Section

SEC. THRU SPLICE

CLAMP BAR

Two component non-staining gray sealing compound with polysulfide liquid polymers-gun grade with primer.

½" Preformed Cork Asphalt Joint Filler. (meets qualifications for ASTM: Designation D 1751) Cost incidental.



PARAPET JOINT DETAIL

NOTES:

All Aluminum Alloy Extruded Rail shall be supplied in modular lengths of 30 feet, except at the end of bridge or over open joints in bridge deck where the rail shall be attached to a minimum of 2 posts. If the rail is on a horizontal curve of 2300 foot radius or less, the modular lengths may be reduced but shall be attached to a minimum of 2 posts

All joints in rail shall be spliced per detail.

Provide 1 - ⅛" and 2 - 1/16" Aluminum Shims for 25% of the Posts Rail element shall be parallel to Grade - high spots shall be ground and low spots shimmed.

Seal perimeter of base of post to parapet with two component non-staining gray sealing compound with polysulfide liquid polymers, gun grade with primer. Fabric Bearing Pad shall have same dimensions as base of post.

Aluminum alloy rail shall conform to ASTM B 221 alloy 6061-T6 or 6351-T5 with min yield 35 ksi, min. tensile 38 ksi, and elongation of 10 % in 2 inches.
