Benchmark: Chiseled square on top of NW wingwall on S.N. 074-0069 Sta. 1437+02.66, 37.32' Rt., Elev. 679.88

Existing Structures: S.N. 074-0069 and 074-0070 were originally constructed in 1975 as FAI-72, Section 74-68VB at Sta. 1438+70.61. The structures currently consist of three-span continuous plate girder superstructures with noncomposite concrete decks on concrete pile supported stub abutments and concrete pile supported multi-column piers. The clear deck width is 38'-6", face-to-face parapets is 40'-0" and out-to-out width is 42'-0". The structures are 226'-0" back-to-back of abutments and are skewed 48°45'19.5" left forward.

Traffic to be maintained using stage construction.

No salvage.

SCOPE OF WORK

1. Remove existing superstructure and approach slabs.
2. Remove portions of wingwalls and reconfigure abutments to semi-integral.
3. Construct new superstructure and approach slabs.
4. Repair existing piers as required.
5. Repair existing slopewall as required.

ILLINOIS FED. AID PROJECT

GENERAL NOTES

1. Fasteners shall be ASTM F3125 Grade A325 Type 1. Fasteners shall be hot dip galvanized. See Special Provisions for "Hot Dip Galvanizing of Structural Steel". Bolts 7/8 in. diameter, holes 15/16 in. diameter, unless otherwise noted.
2. Calculated weight of Structural Steel = 413,350 Pounds. This quantity is for the pay item "Furnishing and Erecting Structural Steel" (L. Sum).
3. All structural steel shall be AASHTO M270 Grade 50 and shall be galvanized, unless otherwise noted. See Special Provisions for "Hot Dip Galvanizing for Structural Steel".
4. No field welding is permitted except as specified in the contract documents.
5. Reinforcement bars designated (E) shall be epoxy coated.
6. If the Contractor elects to use cantilever forming brackets on the exterior beams or girders, the brackets shall be placed at the same locations as required for hardwood blocks in Article 503.06(b) of the Standard Specifications. If additional cantilever forming brackets are required, hardwood blocking shall be wedged between exterior and first interior beam at each of these additional bracket locations.
7. The concrete for bridge decks finished according to Article 503.16(a) of the Standard Specifications shall be placed and compacted parallel to the skew in uniform increments along centerline of the bridge. The machine used for finishing shall be set parallel to the skew for striking off and screeding the concrete.
8. Plan dimensions and details relative to the existing structure have been taken from existing plans are subject to nominal construction variations. The Contractor shall field verify existing dimensions and details affecting new construction and make necessary approved adjustments prior to construction or ordering of materials. Such variations shall not be cause for additional compensation for a change in scope of the work, however, the Contractor will be paid for the quantity actually furnished at the unit price bid for the work.
9. The existing structural steel coating contains lead. The Contractor shall take appropriate precautions to address the presence of lead on this project.
10. All drainage system componets shall extend to 2'-0" from the end of each wingwall except on outlet pipe shall extend until intersecting with the side slopes. the pipes shall drain into concrete headwalls. (See Article 601.05 of the Standard Specifications and Highway Standard 601101.)
11. The Railroad will be provided as-built drawings shoing the actual clearances as constructed. Depth, size, and location of all foundation components shall be shown on the drawings.
12. All work to be performed on, over, under or adjacent to the Railroad right-of-way shall comply with the Norfolk Southern Railway Company ("Railroad", "NSR" or "NS") Public Projects Manual (Appendix E, Special Provisions for the Protection of Railway Interests, and Appendix H1, Overhead Grade Separation Design Criteria). When in conflict with other project specifications, the most stringent one shall apply.

Notes:

Pre-Stage Removal & Construction Line for repairs = Stage Removal Line.

Deck survey performed on March 12, 2021. Locations and size shown in the plan view are approximate.

Longitudinal Removal for Deck Slab Repair (Full-Depth, Type II) must be done in alternating sections of no more than 10 feet. Adjacent sections must not be removed until both of the following requirements are met:

- 1. At least 72 hours shall have elapsed from the end of the previous pour, and*
- 2. The concrete shall have attained a minimum modulus of rupture of 675 psi or a minimum compressive strength of 4000 psi.*

The Deck Slab Repair (Partial) Quantity has been estimated as 10% of the Stage 1 Traffic deck area.

Removal of existing HMA wearing surface shall be completed according the Special Provision for Deck Slab Repair.

DEAD LOAD DEFLECTION DIAGRAM
(Includes weight of concrete only.)

Note:
The above deflections are not to be used in the field if the engineer is working from the grade elevations adjusted for dead load deflections and grinding as shown on sheets 18 thru 22 of 49.

To determine "t": After all structural steel has been erected, elevations of the top flanges of the girders shall be taken at intervals shown below. These elevations subtracted from the "Theoretical Grade Elevations Adjusted for Dead Load Deflection and Grinding" shown on Sheets 18 thru 22 of 49, minus 8 1/4" deck thickness, equals the fillet heights "t" above top flange of girders.
The slab is to be ground after curing to achieve smoothness, but the slab is not to be ground to elevations below the "Theoretical Grade Elevations" shown on sheets 18 thru 22 of 49. For grinding the deck, see Special Provisions.

Notes:

Fiberglass pipe shall conform to ASTM D2996, with short-time rupture strength hoop tensile stress of 30,000 p.s.i. minimum.

The top portion of aluminum floor drains shall be coated with 5 mils of either bitumen paint or epoxy paint to minimize reaction with wet concrete.

The clamping device shall be galvanized according to AASHTO M 232. Cost of clamping device included with Floor Drains.

The 3/16" min. aluminum sheet shall be ASTM B 209 alloy 3003-H14 and coated with 5 mils of either bitumen paint or epoxy paint to minimize reaction with wet concrete. Cost included with Concrete Superstructure.

The polyurethane sealant shall be according to Article 1050.04 of the Std. Spec. and the color shall be gray.

Exterior surfaces of floor drains below deck shall be pigmented or painted to match the color of the adjacent beam.

Bar Terminators paid for separately. See Total Bill of Material.

WEB WELD DETAIL

- I_s, S_s : Non-composite moment of inertia and section modulus of the steel section used for computing f_s (Total-Strength I, and Service II) due to non-composite dead loads (in.⁴ and in.³).
- $I_c(n), S_c(n)$: Composite moment of inertia and section modulus of the steel and deck based upon the modular ratio, "n", used for computing f_s (Total-Strength I, and Service II) in uncracked sections due to short-term composite live loads (in.⁴ and in.³).
- $I_c(3n), S_c(3n)$: Composite moment of inertia and section modulus of the steel and deck based upon 3 times the modular ratio, "3n", used for computing f_s (Total-Strength I, and Service II) in uncracked sections, due to long-term composite (superimposed) dead loads (in.⁴ and in.³).
- $I_c(cr), S_c(cr)$: Composite moment of inertia and section modulus of the steel and longitudinal deck reinforcement, used for computing f_s (Total-Strength I and Service II) in cracked sections, due to both short-term composite live loads and long-term composite (superimposed) dead loads (in.⁴ and in.³).
- S_x : Section modulus about the major axis of a section to the controlling flange, tension or compression, taken as yield moment with respect to the controlling flange over the yield strength of the controlling flange (in.³).
- DC1: Un-factored non-composite dead load (kips/ft.).
- M_{DC1}: Un-factored moment due to non-composite dead load (kip-ft.).
- DC2: Un-factored long-term composite (superimposed excluding future wearing surface) dead load (kips/ft.).
- M_{DC2}: Un-factored moment due to long-term composite (superimposed excluding future wearing surface) dead load (kip-ft.).
- DW: Un-factored long-term composite (superimposed future wearing surface only) dead load (kips/ft.).
- M_{DW}: Un-factored moment due to long-term composite (superimposed future wearing surface only) dead load (kip-ft.).
- LLDF: Live Load Distribution Factor for moment and shear computed according to Article 4.6.2.2 and further IDOT provisions.
- M_{ℓ + IM}: Un-factored live load moment plus dynamic load allowance (impact) (kip-ft.).
- M_u : Strength I load combination of factored design moments (kip-ft.).
1.25 (M_{DC1} + M_{DC2}) + 1.5 M_{DW} + 1.75 M_{ℓ + IM}
- f_t : Factored calculated flange lateral bending stress as calculated using Article 6.10.1.6 and as further simplified by IDOT provisions (ksi).
- $\phi_r M_n$: Factored nominal flexural resistance of the section determined as specified in Article 6.10.7.1 or A6 as applicable (kip-ft.).

WELD LIMITS AND CLIP DETAILS

*** Stop welds 1/4" (±1/8") from edges as shown. Typical.

- f_s DC1: Un-factored stress at edge of flange for controlling steel flange due to vertical non-composite dead loads as calculated below (ksi).
M_{DC1} / S_s
- f_s DC2: Un-factored stress at edge of flange for controlling steel flange due to vertical composite dead loads as calculated below (ksi).
M_{DC2} / $S_c(3n)$ or M_{DC2} / $S_c(cr)$ as applicable.
- f_s DW: Un-factored stress at edge of flange for controlling steel flange due to vertical composite future wearing surface loads as calculated below (ksi).
M_{DW} / $S_c(3n)$ or M_{DW} / $S_c(cr)$ as applicable.
- $f_s (\ell + IM)$: Un-factored stress at edge of flange for controlling steel flange due to vertical composite live load plus impact loads as calculated below (ksi).
M_{ℓ + IM} / $S_c(n)$ or M_{ℓ + IM} / $S_c(cr)$ as applicable.
- $f_s + f_t/2$ (Service II): Sum of stresses as computed below (ksi).
 f_s DC1 + f_s DC2 + f_s DW + 1.3 $f_s (\ell + IM)$ + $f_t/2$
- Service II Resistance: Composite (0.95R_{hF_{yr}}) or noncomposite (0.80R_{hF_{yr}}) stress capacity according to Article 6.10.4.2 (ksi).
- $f_s + f_t/3$ (Strength I): Sum of stresses as computed below on non-compact sections (ksi).
1.25 (f_s DC1 + f_s DC2) + 1.5 f_s DW + 1.75 $f_s (\ell + IM)$ + $f_t/3$
- $\phi_r F_n$: Factored nominal flexural resistance of the section as specified in Article 6.10.7.2 or 6.10.8 as applicable (ksi).
- V_r : Maximum factored shear range in span computed according to Article 6.10.10.
- OCF: Obtuse Correction Factor according to Article 4.6.2.2.3c or as further simplified by IDOT provisions.
- R_{DC1} : Un-factored reaction due to non-composite dead load (kip).
- R_{DC2} : Un-factored reaction due to long-term composite (superimposed excluding future wearing surface) dead load (kip).
- R_{DW} : Un-factored reaction due to long-term composite (superimposed future wearing surface only) dead load (kip).
- R_ℓ : Un-factored live load reaction (kip).
- R_{IM} : Un-factored dynamic load allowance (impact) (kip).
- R_{Total} (Strength I)(Impact): Strength I load combination of factored design reactions (kip).
1.25 (R_{DC1} + R_{DC2}) + 1.5R_{DW} + 1.75 (R_ℓ + R_{IM})
- R_{Total} (Strength I)(No Impact): Strength I load combination of factored design reactions, not including dynamic load allowance (Impact) (kip).
1.25 (R_{DC1} + R_{DC2}) + 1.5R_{DW} + 1.75 (R_ℓ)

INTERIOR CROSS-FRAME

Side retainers and other steel members required for the elastomeric bearing assembly shall be included in the cost of Elastomeric Bearing Assembly, Type I.

New steel extensions, shim plates and connection bolts are included with Furnishing and Erecting Structural Steel.

Prior to ordering any material, the Contractor shall verify in the field all bearing height and shim thickness dimensions.

Two 1/8 in. adjusting shims shall be provided for each bearing in addition to all other plates or shims and placed as shown on the bearing details.

All (embedded and separate) bearing plates, side retainers, anchor bolts, nuts, washers and pintles shall be galvanized according to AASHTO M111 or M232 as applicable.

The structural steel plates and pintles of the fixed bearing steel extensions shall conform to the requirements of AASHTO M270 Grade 50
