SEWER CONNECTIONS (VOS)

This work shall consist of the work necessary to rebuild the sewer connections at all locations where the existing structures have been reconstructed or removed and replaced with new structures as well as any coring needed to connect into existing structures where described within the plans or as directed by the Engineer or representative of the Engineer. The connection shall be made with the same size and type of materials as the existing pipe, or as directed by the Engineer or representative of the Engineer. If a tight connection cannot be obtained with normal connection procedures, or other means of mechanical coupling approved by the Engineer or representative of the Engineer will be used.

Excavation of trenches shall be performed according to the applicable requirements of Article 550.04. Backfill of trenches shall be performed according to the applicable requirements of Article 550.07

New storm sewer installations will be measured for payment in place in feet of the type specified. When the storm sewer enters a manhole, inlet, or catch basin, the measurement will end at the inside wall of the manhole, inlet or catch basin.

No payment for storm sewer will be made through a manhole, inlet or catch basin where the manhole, inlet or catch basin is paid for as a separate item. However, when the storm sewer is continuous and the manhole, inlet or catch basin is constructed on top of the storm sewer, the measurement will be from end to end of storm sewer with a deduction made for the tee section which is paid for separately.

Removal of the existing storm sewers will not be measured for payment, but shall be considered as included in the cost of the new storm structure as specified.

This work shall be included in the cost of the manhole, inlet, catch basin and pipe items and shall include all labor, materials, and equipment necessary to complete this work in accordance with the plans and specifications, unless otherwise specified.
