G.N.-406.10
FOR MULTILANE RESURFACING
WHEN BEGINNING THE RESURFACING WITH NEW MIXTURES FOR LEVELING BINDER, BINDER COURSE, AND SURFACE COURSE MIXTURES, THE WORK WILL BE CONFINED TO THE INSIDE TRAFFIC LANE (PASSING LANE) FIRST. THE WORK WILL REMAIN ON THE INSIDE LANE UNTIL THE MIX HAS BEEN ADJUSTED AND APPROVED BY THE ENGINEER BEFORE ANY RESURFACING IS ALLOWED ON THE OUTSIDE (DRIVING) TRAFFIC LANE(S).

ANY DELAYS OR INCONVENIENCES CAUSED THE CONTRACTOR IN COMPLYING WITH THIS REQUIREMENT WILL BE CONSIDERED INCIDENTAL TO THE VARIOUS HOT-MIX ASHPALT PAY ITEMS, AS SHOWN IN THE CONTRACT, AND NO ADDITIONAL COMPENSATION WILL BE ALLOWED.

Structures 010-0014 & 010-0015 were built in 1966 as FAI route 74, Section 10-4HB at station 1518+75.19 by the State of Illinois in Champaign County. In 1975, the structures received a waterproofing mebrane with a Bitumious Concrete wearing surface as Section District 5 Waterproofing 1975-3.

The existing structures are two-span structures with back-to-back of abutment length of 113'-4". The structures measure 40'-0" from face-to-face of parapets and has an out-to-out width of 42'-0". The structures were built on a 10°-57' right-forward skew. The superstructures consist of seven WF steel girders supporting a 7" reinforced concrete deck. The superstructure is supported by two pile bent vaulted abutments and a pier on a spread footing. The slopes are protected with concrete slope walls.

GENERAL NOTES

The deck ends and hatch blocks shall have its final surface tined according to Article 420.09 (e) (1) of the Standard Specifications. Cost to be included with concrete superstructures.

Plan dimensions and details relative to existing plans are subject to nominal construction variations. The Contractor shall field verify existing dimensions and details affecting new construction and make necessary approved adjustments prior to construction or ordering of materials. Such variations shall not be cause for additional compensation for a change in scope of work. However, the Contractor will be paid for the quantity actually furnished at the unit price for the work.

The existing structural steel coating contains lead. The Contractor shall take appropriate precautions to deal with the presence of lead on this project.

All structural steel shall conform to AASHTO Classification M-270 Grade 36, unless otherwise noted.

Reinforcement bars designated (E) shall be epoxy coated.

Prior to pouring the new concrete deck, all heavy or loose rust, loose mill scale, and other loose or potentially detrimental foreign material shall be removed from the surfaces in contact with concrete. Tightly adhered paint may remain unless otherwise noted. Removal shall be accomplished by methods that will not damage the steel and the cost will be included in the pay item covering removal of the existing concrete.

Existing structural steel that will be in contact with new structural steel shall be cleaned and painted prior to erection as required by the Special Provision "Cleaning and Painting Contact Surface Areas of Existing Steel Structures".

Existing reinforcement bars extending into the removal area shall be cleaned, straightened and incorporated into the new construction. Any reinforcement bars that are damaged during concrete removal shall be replaced with an approved bar splicer or anchorage system. Cost included with Concrete Removal.

Joint openings shall be adjusted according to article 520.04 of the Std. Specs. when the deck is poured at an ambient temperature other than 50°F.

If the analysis submitted to the contractor for jacking/temporary support system to be used shows temporary stiffeners are required to prevent web crippling or buckling, the stiffeners shall be steel and bolted to the web. If stiffeners are not required, hard wood timbers shall be installed tightly between the top and bottom flange to prevent flange rotation.

S.N. 010-0014 & 0015 have been determined, through testing, not to involve asbestos in a bituminous bridge deck wearing surface or waterproofing membrane. As certified with BBS Form 2536, Janurary 3, 2003.

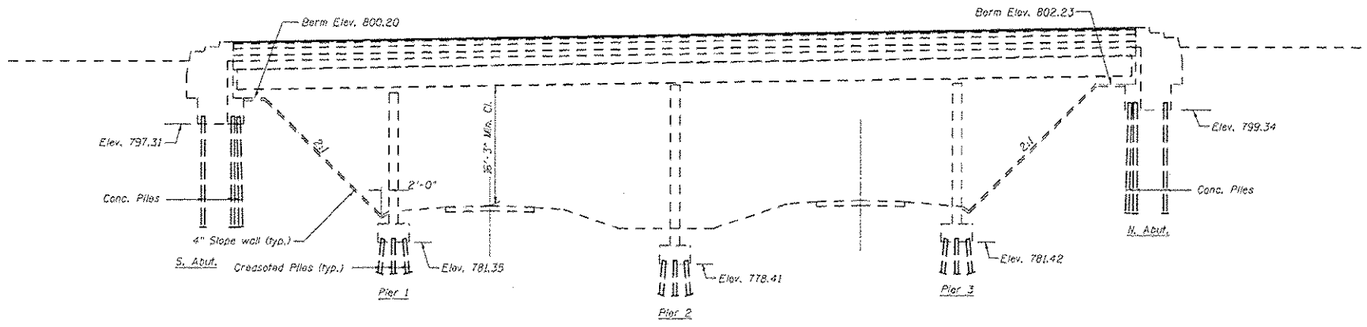
STRUCTURE 010-0167 WAS ORIGINALLY BUILT IN 1966 AS FAI ROUTE 74, SECTION 10-5HB AT STATION 1742+74.26 BY THE STATE OF ILLINOIS.

THE EXISTING STRUCTURE IS A FOUR SPAN STRUCTURE WITH A BACK-TO-BACK OF ABUTMENT LENGTH OF 248'-3". THE STRUCTURE MEASURES 24'-0" FROM FACE-TO-FACE OF SAFETY WALK AND HAS AN OUT-TO-OUT WIDTH OF 30'-0". THE STRUCTURE WAS BUILT ON A 23° 28' LEFT-FORWARD SKEW. THE SUPERSTRUCTURE CONSISTS OF FIVE STEEL GIRDERS SUPPORTING A 6½" REINFORCED CONCRETE DECK. THE SUPERSTRUCTURE IS SUPPORTED BY PILE ABUTMENTS AND PIERS. THE SLOPES ARE PROTECTED WITH CONCRETE SLOPE WALLS.

METHOD OF CONSTRUCTION: ROAD CLOSURE



ELEVATION

• ELEVATIONS TAKEN FROM AS-BUILT PLANS AND ARE SHOWN FOR PERSPECTIVE ONLY.

GENERAL NOTES

Plan dimensions and details relative to existing plans are subject to nominal construction variations. The Contractor shall field verify existing dimensions and details affecting new construction and make necessary approved adjustments prior to construction or ordering of materials. Such variations shall not be cause for additional compensation for a change in scope of work. However, the Contractor will be paid for the quantity actually furnished at the unit price for the work.

Reinforcement bars designated (E) shall be epoxy coated.

The existing structural steel coating contains lead. The Contractor shall take appropriate precautions to deal with the presence of lead on this project.

All structural steel shall conform to AASHTO Classification M-270 Grade 36, unless otherwise noted.

Existing structural steel that will be in contact with new structural steel shall be cleaned and painted prior to erection as required by the Special Provision "Cleaning and Painting Contact Surface Areas of Existing Steel Structures".

Existing reinforcement bars extending into the removal area shall be cleaned, straightened and incorporated into the new construction. Any reinforcement bars that are damaged during concrete removal shall be replaced with an approved bar splicer or anchorage system. Cost included with Concrete Removal.

See Special Provision "Deck Slab Repair" for additional requirements pertaining to Deck Slab Repair.

Areas of Deck Slab Repairs shown are estimated. The Engineer shall show actual locations of the deck repairs on As-Built plans.

PROPOSED WORK

1. *Remove and replace select deck drains.*
2. *Partial depth patching on existing deck.*
3. *Place Steel Railing, Type 2399*
4. *Remove and replace existing guardrail and terminals.*
