GENERAL NOTES

GENERAL NOTES

1. The Contractor shall drive pile(s) as part of permanent pile groups as directed by the Engineer, before ordering balance of piles.

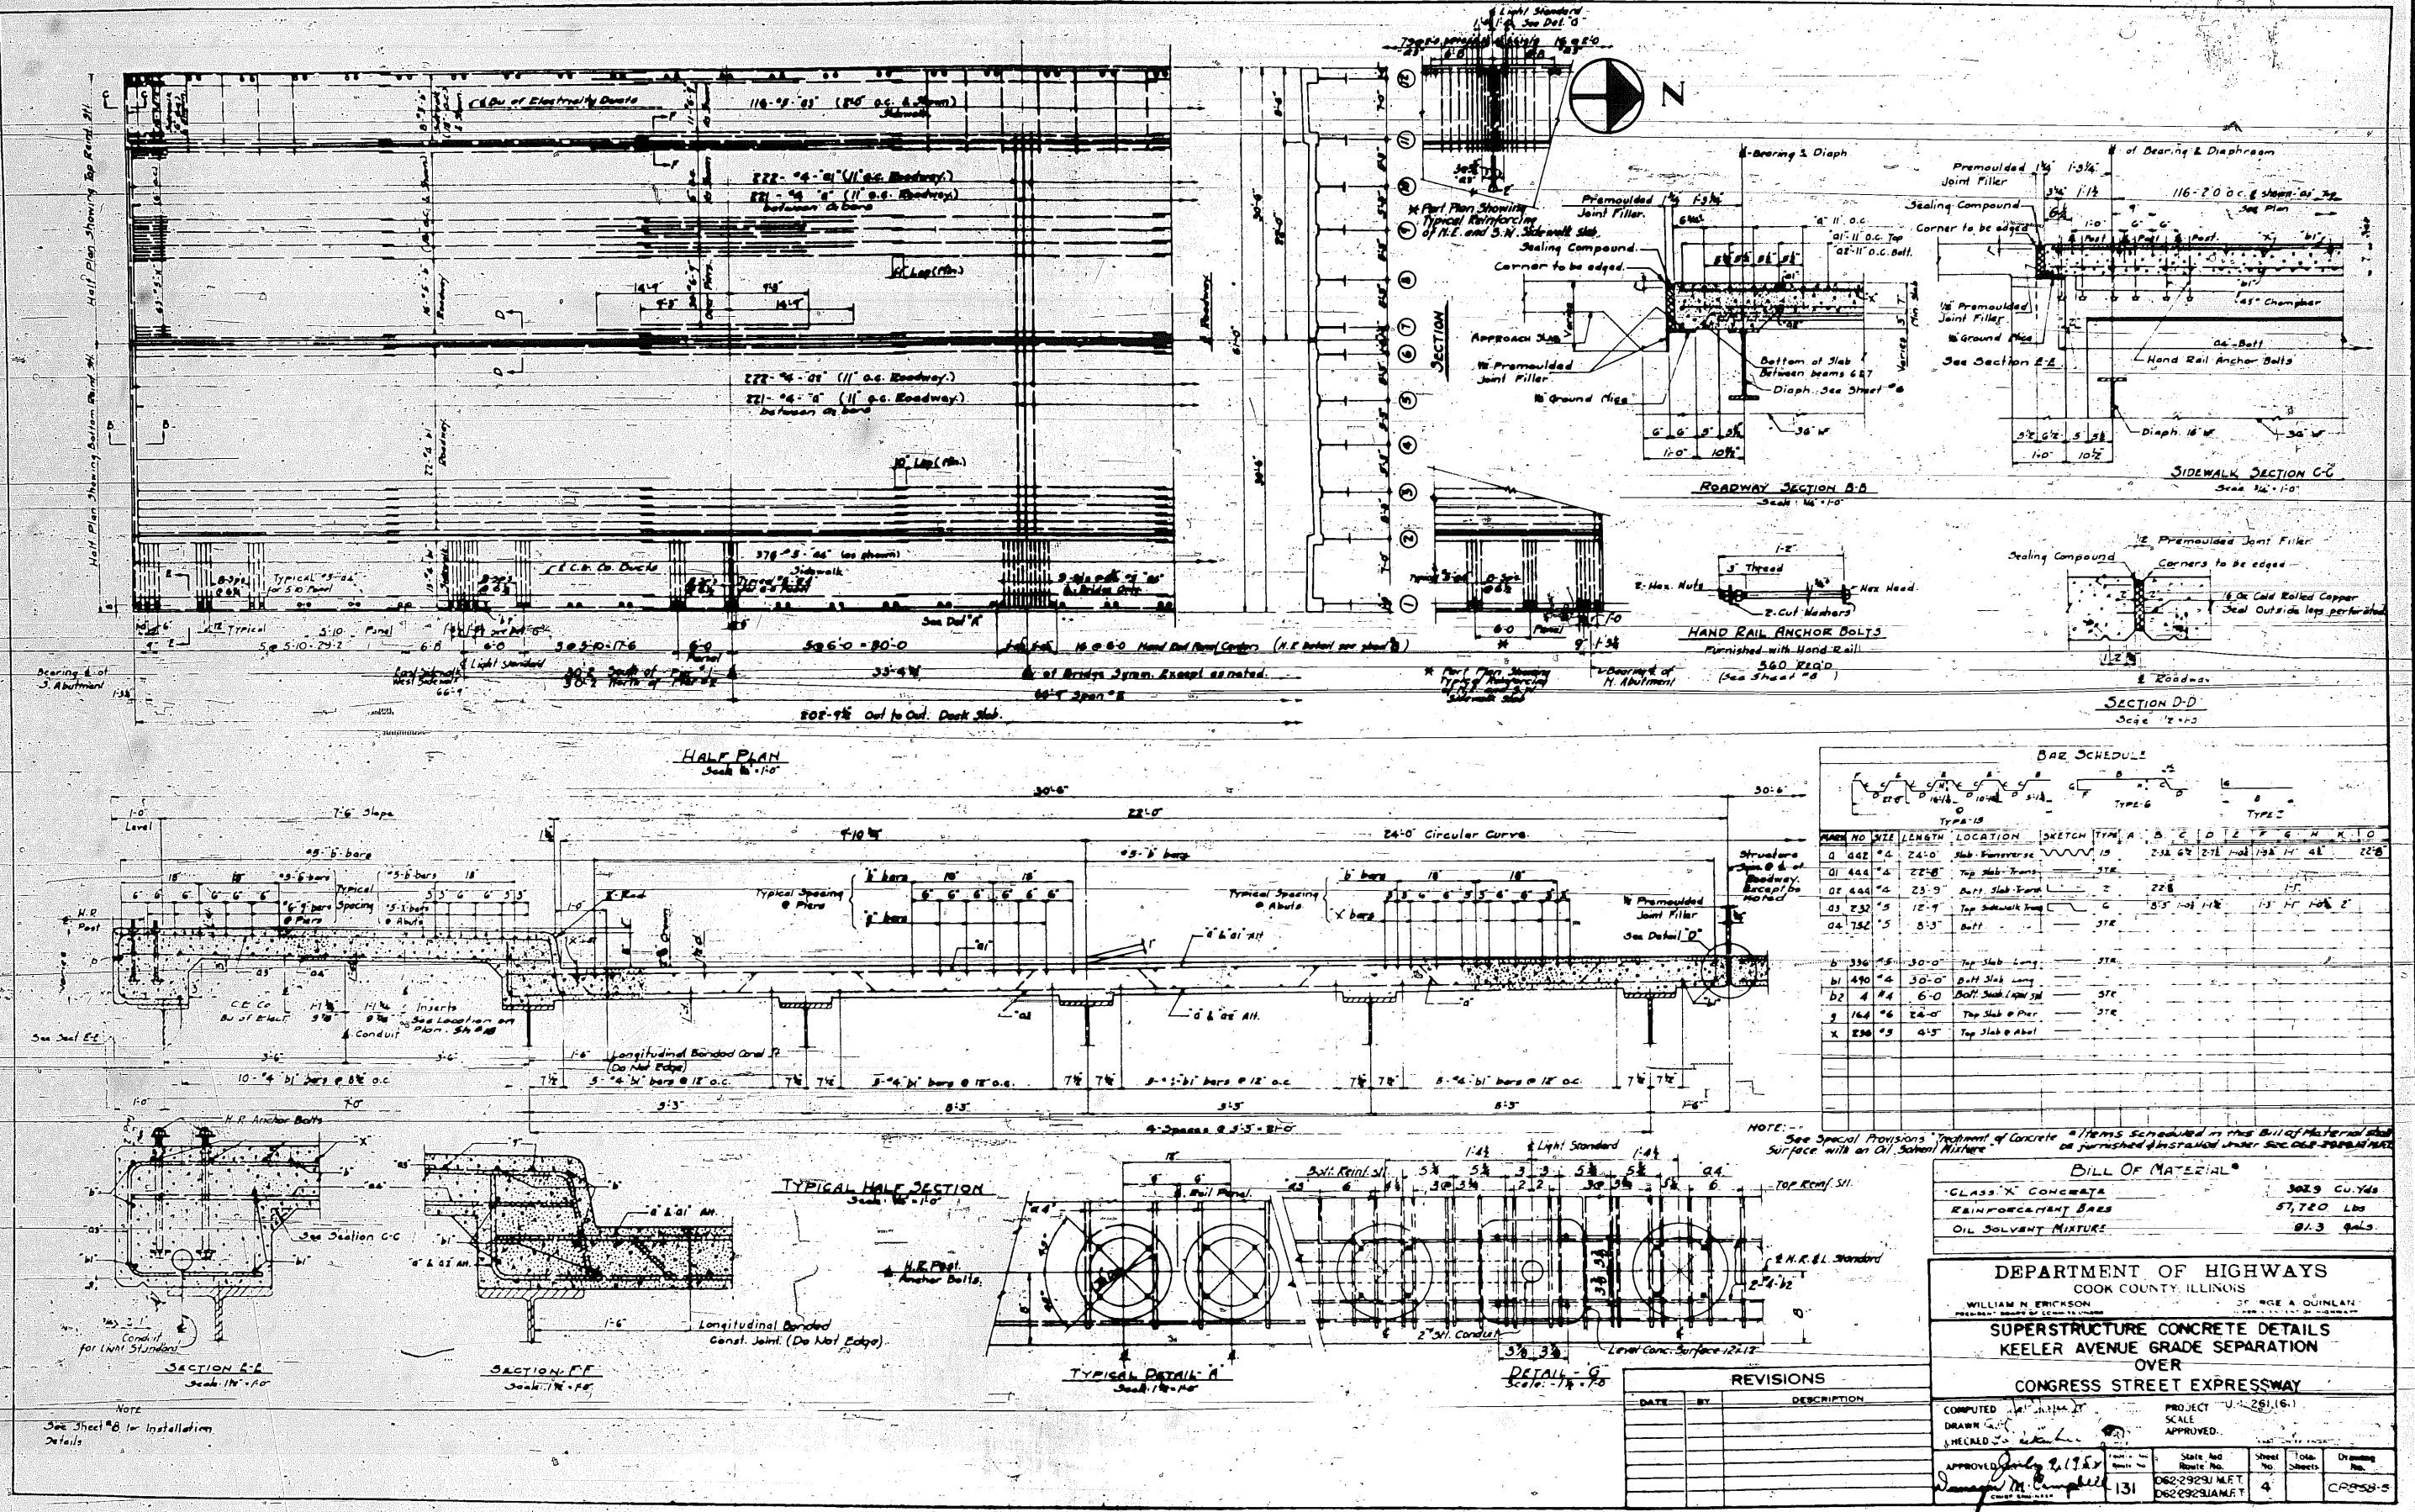

2. All piles shall be driven to obtain a minimum penetration of 10.0 into a stratum of solid material, regardless of bearing capacity developed.

Each section of bridge floor slab shall be poured in one continuous operation from abutment to abutment.
Finishing of floor slab shall comply with Section 51 of the Standard Specifications

The cost of copper water seal, copper nails and prepackaged joint filler are to be included in the bid price of Class x Concrete. The Copper Water Seal applies shall be banded or breasted.

Class x Concrete to be used thruout except Concr in Wing Handrails which shall be Handrail Concrete

NOTE - Method of Determining Fiber Heights -
After all structural steel has been erected, elevations of the top flanges of the beams shall be taken at intervals not to exceed 10 ft. from these elevations subtract the increment of deflection for these points determined from the DL deflection diagram. The elevations so obtained subtracted from the theoretical grade elevations, minus floor thickness, equals the fiber height.
