NOTES

The units shall remain on the bottom supporting forms until the concrete has attained a compressive strength of not less than 3,500 pounds per square inch.
This work shall be done and paid for in accordance with Section 504 of the Standard Specifications effective January 1, 2007. In case of conflict these notes shall take precedence.
The 1" ϕ rods in the transverse tie assembly shall be tightened to a snug fit and the threads set.
Space reinforcement to miss holes for dowel rods.
Reinforcement bars shall conform to ASTM A 706, Grade 60. See Special Provisions.
Two ⅛" fabric adjusting shims of the dimensions of the exterior bearing pad shall be provided for each bearing pad location.
Unless otherwise approved by the Engineer, lifting loops shall be ½" ϕ non-galvanized high strength stress relieved wire strands. A minimum 2½" ϕ lifting pin shall be used to engage the lifting loops during handling.
Cost of reinforcement and accessories cast into slab unit, of bearing pads, furnishing, drilling for, placing and grouting anchor dowels, of furnishing and assembling of 1"ϕ bolts and of grouting longitudinal shear key is included in the Unit bid price for "Precast Concrete Bridge Slab."
Tack welding of stirrups to longitudinal reinforcement bars will not be permitted except as otherwise authorized in writing by the Engineer.
