Reinforcement bars in diaphragm are billed with superstructure on sheet S1-21.

Concrete in diaphragm is included with Concrete Superstructure on sheet S1-21.

For details of bars s(E), s1(E), m(E) and u(E) see sheet S1-21.

The s(E), s1(E) and u(E) bars shall be placed parallel to the girders. Spacing for these bars shall be at right angles to the beams.

The approach slab seat shall have a constant slope determined from the control points shown.

For bearing details see sheet S1-33.

Notes:

The precast bridge approach slab shall be according to Section 504 of the Standard Specifications and shall be paid for at the contract unit price per square foot for Precast Bridge Approach Slab.

Cast-in-place substitution of Precast Bridge Approach Slab is not allowed.

Parapet concrete shall be paid for as Concrete Superstructure.

Parapet and wearing surface reinforcement shall be paid for as Reinforcement Bars, Epoxy Coated.

Approach footing concrete shall be paid for as Concrete Structures.

The top surface of precast bridge approach slabs shall be roughened to a depth of 1/4" according to the IDOT "Manual for Fabrication of Precast Prestressed Concrete Products."

After precast bridge approach slab has been erected, holes shall be drilled into abutment and anchor dowels placed. Dowel holes shall be filled with non-shrink grout to top of precast slab and allowed to cure fully prior to grouting the longitudinal shear keys.

Two 1/8" fabric adjusting shims of the dimensions of the exterior bearing pad shall be provided for each bearing pad location. Cost included with Precast Bridge Approach Slab.

A minimum 2 1/2" ϕ lifting pins shall be used to engage the lifting loops during handling.

Compressive strength of precast concrete, f'c shall be 6,000 psi.

For additional parapet details, see sheets S1-21, S1-23 & S1-24.

Any concrete poured monolithically with the wearing surface, such as curbs, will not be paid for separately, but will be included in the cost of Concrete Wearing Surface, 5".

The strip seal shall be made continuous and shall have a minimum thickness of 1/4". The strip seal shall extend 6" beyond the edge of the approach slab on each end. The configuration of the strip seal shall match the configuration of the Locking Edge Rails.

The height and thickness of the Locking Edge Rails shown are minimum dimensions. The actual configuration of the Locking Edge Rails and matching strip seal may vary from manufacturer to manufacturer. Flanged edge rails will not be allowed.

The inside of the Locking Edge Rail groove shall be free of weld residue.

Locking Edge Rails may be spliced at slope discontinuities and stage construction joints.

The manufacturer's recommended installation methods shall be followed.

All steel components shall be galvanized after fabrication according to Article 520.03 of the Standard Specifications.

Maximum space between rail segments at stage lines shall be 3/16", sealed with a suitable sealant

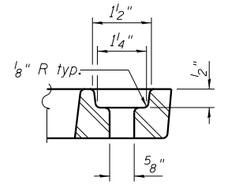
VANE GRATE DETAIL



BOLT HOLE DETAIL

Notes:

All cast iron parts shall be gray iron conforming to the requirements of AASHTO M 105, Class 35B.

Bolts, anchor studs, washers and nuts shall conform to the requirements of ASTM A 307 and shall be galvanized according to AASHTO M 232.

Downspouts located on the exterior side of a painted steel fascia beam shall be painted with the finish coat specified for the exterior side of the fascia beam.

As an alternate, bolts, anchor studs, washers and nuts may be stainless steel according to Article 1006.29(d) of the Standard Specifications.

Structural steel weldments of equal sections and of the same configuration may be substituted for the cast iron scupper frame. Fillet or full penetration welds shall be used for the weldments. Details shall be submitted to the Engineer for approval. Structural steel weldments shall not be substituted for the cast iron scupper grate. Structural steel frames and downspouts shall be galvanized according to AASHTO M111.

The Contractor shall take appropriate measures to assure that Protective Coat is not applied to the scupper.

Cost of the Grate, Frame, Downspout, Anchor Studs, Bolts, Washers and Nuts including complete installation of the scupper shall be paid for at the contract unit price each for Drainage Scupper, DS-11.

Alternate fiberglass downspout conforming to ASTM D 2996 with a short-time rupture strength hoop tensile stress of 30,000 psi min. may be used in lieu of the cast iron or steel equivalent.

GIRDER ELEVATION

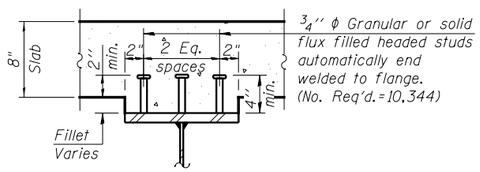
(Spans 1 & 2)

* 1'-10" (No studs)



SECTION A-A

Notes:

1. Load carrying components designated "NTR" shall conform to the Impact Testing Requirement, Zone 2.
2. Girders have bearing stiffeners and connection plates as required by design. Additional stiffeners may be added at the Contractor's expense as necessary to prevent distortion of the girders during galvanizing. The Contractor shall coordinate with the fabricator and the galvanizer to determine if additional stiffeners are necessary, and where these should be placed. Any proposed changes shall be submitted to the Engineer for approval prior to making any changes.
3. Temporary stiffener angles shall be bolted to each side of the splice ends of each girder segment to prevent distortion during galvanizing. Temporary stiffener angles shall bolt or fit tight against top & bottom flanges and include spacer tubes to minimize damage to galvanizing during removal. Cost included with Furnishing and Erecting Structural Steel.

Note:

1. R_{DC1} Value at the West Abutment includes the deadload from the approach slab.

I_s, S_s: Non-composite moment of inertia and section modulus of the steel section used for computing f_s (Total-Strength I, and Service II) due to non-composite dead loads (in.^{4} and in.^{3}).

$I_c(n)$, $S_c(n)$: Composite moment of inertia and section modulus of the steel and deck based upon the modular ratio, "n", used for computing f_s (Total-Strength I, and Service II) in uncracked sections due to short-term composite live loads (in.^{4} and in.^{3}).

$I_c(3n)$, $S_c(3n)$: Composite moment of inertia and section modulus of the steel and deck based upon 3 times the modular ratio, "3n", used for computing f_s (Total-Strength I, and Service II) in uncracked sections, due to long-term composite (superimposed) dead loads (in.^{4} and in.^{3}).

$I_c(cr)$, $S_c(cr)$: Composite moment of inertia and section modulus of the steel and longitudinal deck reinforcement, used for computing f_s (Total-Strength I and Service II) in cracked sections, due to both short-term composite live loads and long-term composite (superimposed) dead loads (in.^{4} and in.^{3}).

DC1: Un-factored non-composite dead load (kips/ft.).

M_{DC1}: Un-factored moment due to non-composite dead load (kip-ft.).

DC2: Un-factored long-term composite (superimposed excluding future wearing surface) dead load (kips/ft.).

M_{DC2}: Un-factored moment due to long-term composite (superimposed excluding future wearing surface) dead load (kip-ft.).

DW: Un-factored long-term composite (superimposed future wearing surface only) dead load (kips/ft.).

M_{DW}: Un-factored moment due to long-term composite (superimposed future wearing surface only) dead load (kip-ft.).

M_{L+IM}: Un-factored live load moment plus dynamic load allowance (impact) (kip-ft.).

M_u (Strength I): Factored design moment (kip-ft.).
$1.25\ (M_{DC1} + M_{DC2}) + 1.5\ M_{DW} + 1.75\ M_{L+IM}$

$\phi_f M_n$: Compact composite positive moment capacity computed according to Article 6.10.7.1 or non-slender negative moment capacity according to Article A6.1.1 or A6.1.2 (kip-ft).

f_s DC1: Un-factored stress at edge of flange for controlling steel flange due to vertical non-composite dead loads as calculated below (ksi).
M_{DC1} / S_{nc}

f_s DC2: Un-factored stress at edge of flange for controlling steel flange due to vertical composite dead loads as calculated below (ksi).
$M_{DC2} / S_c(3n)$ or $M_{DC2} / S_c(cr)$ as applicable.

f_s DW: Un-factored stress at edge of flange for controlling steel flange due to vertical composite future wearing surface loads as calculated below (ksi).
$M_{DW} / S_c(3n)$ or $M_{DW} / S_c(cr)$ as applicable.

f_s (L+IM): Un-factored stress at edge of flange for controlling steel flange due to vertical composite live load plus impact loads as calculated below (ksi).
$M_{L+IM} / S_c(n)$ or $M_{DW} / S_c(cr)$ as applicable.

f_s (Service II): Sum of stresses as computed below (ksi).
$f_{sDC1} + f_{sDC2} + f_{sDW} + 1.3\ f_s(L+IM)$

$0.95R_hF_yf$: Composite stress capacity for Service II loading according to Article 6.10.4.2 (ksi).

f_s (Total)(Strength I): Sum of stresses as computed below on non-compact section (ksi).
$1.25\ (f_{sDC1} + f_{sDC2}) + 1.5\ f_{sDW} + 1.75\ f_s(L+IM)$

$\phi_f F_n$: Non-Compact composite positive or negative stress capacity for Strength I loading according to Article 6.10.7 or 6.10.8 (ksi).

V_f: Maximum factored shear range in span computed according to Article 6.10.10.

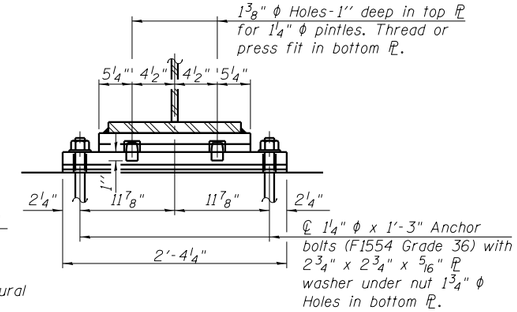
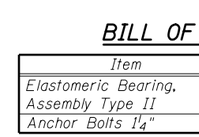
ELEVATION AT PIER



SECTION B-B

FIXED BEARING AT PIER 2

(8 Required)



PINTLE

Notes:

Anchor bolts shall be ASTM F1554 all-thread (or an Engineer-approved alternate material) of the grade(s) and diameter(s) specified. The corresponding specified grade of AASHTO M314 anchor bolts may be used in lieu of ASTM F1554.

Anchor bolts at fixed bearings may be either cast in place or installed in holes drilled after the supported member is in place.

Drilled and set anchor bolts shall be installed according to Article 521.06 of the Standard Specifications.

Side retainers, anchorage assembly and other steel members required for the elastomeric bearing assembly shall be included in the cost of Elastomeric Bearing Assembly, Type II.

The ⅛" PTFE sheet shall be bonded directly to the top steel plate with a two-component, medium viscosity epoxy resin, conforming to the requirements of the Federal Specification MMM-A-134, Type I. The bond agent shall be applied on the full area of the contact surfaces.

Bonding of ⅛" PTFE sheet during vulcanizing process will be permitted provided the process and method of adjusting assembly height is approved by the Engineer.

Fixed Bearing included in the cost of Furnishing and Erecting Structural Steel.

Two ⅛" adjusting shims shall be provided for each bearing in addition to all other plates or shims and placed as shown on bearing details.

All (embedded and separate) bearing plates, side retainers, anchor bolts, nuts, washers and pintles shall be galvanized according to AASHTO M111 or M232 as applicable.

Anchor bolts and side retainers at all supports shall be installed as each member is erected unless an equivalent temporary means of lateral restraint is used.

GENERAL NOTES

Begin Drilling: **07-29-2013** Complete Drilling: **07-29-2013**
Drilling Contractor: **Wang Testing Services** Drill Rig: **CME-55 TMR**
Driller: **R&J** Logger: **A. Tomaras** Checked by: **C. Marin**
Drilling Method: **2.25" SSA to 10', mud rotary thereafter, boring backfilled upon completion**

WATER LEVEL DATA

While Drilling: **Rotary wash**
At Completion of Drilling: **NA**
Time After Drilling: **NA**
Depth to Water: **NA**

The stratification lines represent the approximate boundary between soil types; the actual transition may be gradual.

R.L. = Reference Line

GENERAL NOTES
These Notes apply to Sheets S-1 to S-10 inclusive

Design Data
Loading
AASHO - 1949 Specifications - H20-S16-44
Stresses
Structural Steel
f_s = 18 kips per sq. inch
Reinforced Concrete
f_s = 20 kips per sq. inch } n = 10
f_c = 1.2 kips per sq. inch }
Sub-Piers
Bearing: 12 kips per sq. foot

Fabrication
Structural Steel shall conform to current ASTM-A7 Specifications.
All connections shall be riveted unless otherwise shown
Rivets $\frac{7}{8}$"ø Holes $\frac{15}{16}$"ø unless otherwise shown.
Holes for girder splices to be reamed or drilled - See Detail S-5
All girders of a continuous unit shall be assembled in the shop in their proper position
Welding: See Specifications
Painting: See Specifications
Inspection: See Specifications
Reinforcement Bars shall conform to current ASTM designation A305-49 - Lap 20 bar Dia. unless otherwise noted.

Construction
Verify dimensions and elevations of adjoining structure in field
No construction joints except those shown on the plans will be allowed unless otherwise ordered by the Engineer
All exposed concrete edges shall have $\frac{3}{4}$" chamfer unless otherwise shown on the plans.
Concrete Finish: See Specifications

Designations
Westbound Roadway is designated North Roadway
Eastbound Roadway is designated South Roadway
County Pier #1 on west side of Desplaines Street is designated C1

References
For Location Map and index of drawings: see Sheet G1

Items (Structural)

Class X Concrete,	Item 3
Sub-Piers,	Item 4
Reinforcement Bars,	Item 5
Structural Steel,	Item 6
Premoulded Joint Filler,	Item 21

Sub-Piers
Sub-Piers D1, D2, D3, E3, D4, and E4 are to be constructed thru varying thickness of gravel, crushed stone, and clay backfill as shown on plans on file in the Commissioner's office.
The contractor shall take such precautions as are necessary to insure that the sub-piers will not be in contact with the subway tubes. The contractor shall submit to the Engineer any planned deviation from his normal procedure that may become necessary, in order to construct these sub-piers.

PLAN

ABUTMENT (1) TO BENT (C1)

WORK TO BE PERFORMED

1. – REMOVE EXISTING OVERLAY
2. – REMOVE HANDRAIL AND PART OF EXISTING CURB AND 8" BARRIER CURB
3. – REMOVE ALL LOOSE AND DETERIORATED CONCRETE FROM DECK AT LOCATIONS MARKED BY THE ENGINEER
4. – ELIMINATE LONGITUDINAL EXPANSION JOINTS
5. – RESET EXPANSION BEARINGS
6. – REPAIR DECK SLAB WITH CONCRETE
7. – CONSTRUCT CONCRETE PARAPET AND MEDIAN
8. – RECONSTRUCT DECK EXPANSION JOINTS
9. – WATERPROOF AND RESURFACE DECK WITH 1½" BIT. SURF COURSE
10. – REPAIR SUBSTRUCTURES AS REQUIRED

TYPICAL DECK CROSS SECTION

W.B. RDWY. & E.B. RDWY. FROM ABUT. 1 TO BENT 5 - REST OF E.B. RDWY. SIMILAR

Note: Deck Slab b'twn Abut. ① & Bent ② is Supported by Concrete Beams.

LIST OF STATE STANDARDS

STD. No.	DESCRIPTION
000001	STANDARDS SYMBOLS, ABBREVIATIONS AND PATTERNS
606301	PC CONCRETE MEDIANS
702001	TRAFFIC CONTROL DEVICES
509001	TUBULAR THRIE BEAM RETROFIT RAIL FOR BRIDGES
631056	TRAFFIC BARRIER TERMINAL, TYPE 12
780001	TYPICAL PAVEMENT MARKINGS
701501	URBAN LANE CLOSURE, 2-LANE, 2-WAY, UNDIVIDED
701601	URBAN LANE CLOSURE, MULTILANE, 1-WAY OR 2-WAY WITH NON TRAVERSABLE MEDIAN
701426	LANE CLOSURE MULTILANE, INTERMITTENT OR MOVING OPERATION
701101	MULTILINE OFF ROAD OPERATIONS

PLAN NOTES

1. FIELD WELDING OF CONSTRUCTION ACCESSORIES WILL NOT BE PERMITTED TO THE BOTTOM FLANGE OF BEAMS OR GIRDERS NOR TO THE TOP FLANGE FOR A DISTANCE EQUAL TO ONE-FOURTH THE SPAN LENGTH EACH WAY FROM THE PIER SUPPORTS. FIELD WELDING IN OTHER AREAS WILL BE PERMITTED ONLY WHEN APPROVED BY THE ENGINEER.
2. REINFORCEMENT BARS SHALL CONFORM TO THE REQUIREMENTS OF AASHTO M-31, M-42 OR M-53 GRADE 60.
3. PLAN DIMENSIONS AND DETAILS RELATIVE TO EXISTING STRUCTURE HAVE BEEN TAKEN FROM EXISTING PLANS AND ARE SUBJECT TO NOMINAL CONSTRUCTION VARIATIONS. IT SHALL BE THE CONTRACTOR'S RESPONSIBILITY TO VERIFY SUCH DIMENSIONS AND DETAILS IN THE FIELD AND MAKE NECESSARY APPROVED ADJUSTMENTS PRIOR TO CONSTRUCTION OR ORDERING OF MATERIALS. SUCH VARIATIONS SHALL NOT BE CAUSE FOR ADDITIONAL COMPENSATION FOR A CHANGE IN THE SCOPE OF QUANTITY ACTUALLY FURNISHED AT THE UNIT PRICE BID FOR THE WORK.
4. PRIOR TO PLACING THE NEW CONCRETE AT EXPANSION JOINTS, ALL LOOSE RUST, LOOSE MILL SCALE, LOOSE PAINT AND ALL OTHER FOREIGN MATERIAL SHALL BE REMOVED FROM THE EMBEDDED PORTIONS OF FLANGES OF STRINGERS (GIRDERS). THE REMOVAL SHALL BE ACCOMPLISHED IN ACCORDANCE WITH THE REQUIREMENTS OF THE SSPC SURFACE PREPARATION SPECIFICATIONS SP-3 FOR POWER TOOL CLEANING OR SP-2 FOR HAND TOOL CLEANING. COST SHALL BE INCLUDED IN THE COST FOR CONCRETE REMOVAL.
5. THE EXISTING BITUMINOUS BRIDGE DECK OVERLAY AND MEMBRANE WATERPROOFING SYSTEM SHALL BE REMOVED AND THE AREA OF PARTIAL AND FULL-DEPTH REPAIR SHALL BE DETERMINED BY THE ENGINEER AND MARKED. PARTIAL AND FULL-DEPTH REMOVAL AND REPAIR SHALL BE PERFORMED, AS REQUIRED. AFTER WHICH THE CONCRETE DECK SURFACE SHALL BE SCARIFIED AND A 60mm LATEX CONCRETE OVERLAY SHALL BE PLACED. SEE SPECIAL PROVISIONS FOR BRIDGE DECK OVERLAY.
6. THE CONTRACTOR WILL BE REQUIRED TO MARK ON TOP OF THE CONCRETE DECK THE LOCATIONS OF THE TOP FLANGE OF ALL THE STEEL BEAMS OR GIRDERS. PRIOR TO ANY REMOVAL OF THE BRIDGE CONCRETE DECK. SAWCUTTING DIRECTLY OVER THE TOP OF THE BEAM OR GIRDER FLANGES IS NOT PERMITTED.
7. THE INORGANIC ZINC-SILICATE / ACRYLIC / ACRYLIC PAINT SYSTEM SHALL BE USED FOR SHOP AND FIELD PAINTING OF NEW STRUCTURAL STEEL EXCEPT WHERE OTHERWISE NOTED.
8. CLEANING AND PAINTING OF THE EXISTING STRUCTURAL STEEL SHALL BE DONE AS SPECIFIED IN THE SPECIAL PROVISION FOR "CLEANING AND PAINTING EXISTING STEEL STRUCTURES". ALL THE EXISTING STRUCTURAL STEEL LOCATED WITHIN 5 FEET OF EITHER SIDE OF EXPANSION JOINTS SHALL BE CLEANED AND PAINTED BY METHOD 1.
9. THE THREE COAT LEAD AND CHROMATE FREE ALKYD PAINT SYSTEM SHALL BE USED FOR FIELD PAINTING OF EXISTING STRUCTURAL STEEL. THE COLOR OF THE FINAL FINISH COAT OF THE EXTERIOR FACE AND BOTTOM FLANGE OF THE FASCIA BEAMS SHALL BE PAINTED LIGHT GRAY. MUNSELL 10Y7/1 COLOR.
10. THE COST OF SAWCUTTING FULL DEPTH THE EXISTING PAVEMENT AND OTHER APPURTENANCES LISTED IN SECTION 440 OF THE STANDARD SPECIFICATIONS SHALL BE INCLUDED IN THE ITEM OF WORK BEING PERFORMED.
11. ALL FRAMES AND GRATES AND DELINEATORS DAMAGED BY THE CONTRACTOR DURING CONSTRUCTION WILL BE REPLACED BY THE CONTRACTOR AT HIS EXPENSE.
12. ADDED EXPENSE WHICH WILL BE INVOLVED IN CONNECTING EXISTING DRAINAGE STRUCTURES, PIPE CULVERTS OR STORM SEWERS TO THE PROPOSED DRAINAGE SYSTEM SHALL BE CONSIDERED INCIDENTAL TO THE CONTRACT OR AS NOTED ON PLAN.
13. NOT USED
14. QUANTITIES: QUANTITIES SHOWN ON THE PLANS ARE BASED ON FIELD INSPECTION AT THE TIME OF PLAN PREPARATION AND ARE TO BE USED FOR PREPARATION PROPOSALS. HOWEVER, AS DETERMINED BY THE ENGINEER, QUANTITIES MAY CHANGE BASED UPON CONDITIONS UNCOVERED AT THE TIME OF CONSTRUCTION.
15. SCALE: DO NOT SCALE PLANS FOR CONSTRUCTION DIMENSIONS.
16. NIGHT OPERATIONS: WHEN ARTIFICIAL LIGHTING IS UTILIZED IN NIGHT OPERATIONS THE CONTRACTOR SHALL EXERCISE THE UTMOST PRECAUTION IN PREVENTING ADVERSE VISIBILITY TO THE MOTORING PUBLIC.
17. ANY DAMAGE TO THE REINFORCEMENT BARS AS A RESULT OF THE CONTRACTOR'S CONCRETE SAWING AND/OR CONCRETE REMOVAL OPERATION SHALL BE CORRECTED BY THE CONTRACTOR AT NO ADDITIONAL COST TO THE CONTRACT.
18. WHEREVER EXISTING CONCRETE IS TO BE REMOVED AND NEW CONCRETE IS TO BE PLACED ADJACENT TO IT, EXISTING REINFORCEMENT SHALL BE CLEANED AND EXTENDED INTO THE NEW CONSTRUCTION COST OF THIS WORK SHALL BE CONSIDERED INCLUDED IN THE ITEM.
19. SAWING OF PORTLAND CEMENT CONCRETE PAVEMENT OR DECK WILL NOT BE PAID FOR SEPARATELY BUT SHALL BE CONSIDERED INCLUDED IN THE ITEMS FOR WHICH SAWING IS REQUIRED.
20. WHERE BEARING ADJUSTMENTS ARE REQUIRED AND JACKING IS NECESSARY IN PERFORMANCE OF THIS WORK. THE CONTRACTOR SHALL SCHEDULE THE WORK SO THAT THE BEARING ADJUSTMENTS ARE COMPLETED PRIOR TO PLACEMENT OF EXPANSION JOINTS ABOVE THESE LOCATIONS.
21. FOR STABILIZATION, ALL TYPE III BARRICADES SHALL REQUIRE A MINIMUM OF FOUR SANDBAGS PER BARRICADE.

GENERAL NOTES

1. REINFORCEMENT BARS SHALL CONFORM TO REQUIREMENTS OF AASHTO M-31M, M-42M, OR M-53M, GRADE 400.
2. PLAN DIMENSIONS AND DETAILS RELATIVE TO EXISTING STRUCTURE HAVE BEEN TAKEN FROM EXISTING PLANS AND ARE SUBJECT TO NOMINAL CONSTRUCTION VARIATIONS. IT SHALL BE THE CONTRACTORS RESPONSIBILITY TO VERIFY SUCH DIMENSIONS AND DETAILS IN THE FIELD AND MAKE NECESSARY APPROVED ADJUSTMENTS PRIOR TO CONSTRUCTION OR ORDERING OF MATERIALS. SUCH VARIATIONS SHALL NOT BE CAUSE FOR ADDITIONAL COMPENSATION FOR A CHANGE IN THE SCOPE OF THE WORK. HOWEVER, THE CONTRACTOR WILL BE PAID FOR THE QUANTITY ACTUALLY FURNISHED AT THE UNIT PRICE BID FOR THE WORK.
3. THE CONTRACTOR WILL BE REQUIRED TO MARK ON TOP OF THE CONCRETE DECK THE LOCATIONS OF THE TOP FLANGE OF ALL THE STEEL BEAMS OR GIRDERS, PRIOR TO ANY REMOVAL OF THE BRIDGE CONCRETE DECK. SAW CUTTING DIRECTLY OVER THE TOP OF THE BEAM OR GIRDER FLANGES IS NOT PERMITTED.
4. PRIOR TO PLACING THE NEW CONCRETE AT EXPANSION JOINTS, ALL LOOSE RUST, LOOSE MILL SCALE, LOOSE PAINT AND ALL OTHER FOREIGN MATERIAL SHALL BE REMOVED FROM THE EMBEDDED PORTIONS OF FLANGES OF STRINGERS (GIRDERS). THE REMOVAL SHALL BE ACCOMPLISHED IN ACCORDANCE WITH THE REQUIREMENTS OF THE SSPC SURFACE PREPARATION SPECIFICATIONS SP-3 FOR POWER TOOL CLEANING OR SP-2 FOR HAND TOOL CLEANING. COST SHALL BE INCIDENTAL TO CONCRETE REMOVAL.
5. CLEANING AND PAINTING OF THE EXISTING STRUCTURAL STEEL SHALL BE AS SPECIFIED IN THE SPECIAL PROVISION FOR "CLEANING AND PAINTING EXISTING STEEL STRUCTURES". ALL EXISTING STRUCTURAL STEEL WITHIN 1.5M OF EITHER SIDE OF EXPANSION JOINTS WHERE CALLED FOR ON THE PLANS SHALL BE CLEANED BY METHOD 1 AND PAINTED WHERE CALLED TO BE PAINTED ON THE PLANS. THE LEAD AND CHROMATE FREE ALKYD PAINT SYSTEM SHALL BE USED FOR PAINTING OF EXISTING STRUCTURAL STEEL. THE PRIME AND INTERMEDIATE COATS SHALL BE APPLIED AS SPECIFIED IN THE SPECIAL PROVISION, FOLLOWED BY A FULL FINAL FINISH COAT OVER ALL DESIGNATED STEEL SURFACES. THE COLOR OF THE FINAL FINISH COAT SHALL BE LIGHT GRAY, MUNSELL NO. 10Y 7/1.
6. ALL DIMENSIONS ARE IN MILLIMETERS (mm) EXCEPT AS NOTED.

WORK TO BE PERFORMED

1. THE EXISTING BITUMINOUS BRIDGE DECK OVERLAY AND MEMBRANE WATERPROOFING SYSTEM SHALL BE REMOVED AND THE AREAS OF PARTIAL AND FULL-DEPTH REPAIR DETERMINED BY THE ENGINEER SHALL BE MARKED ON THE DECK. PARTIAL AND FULL-DEPTH REMOVAL AND REPAIR SHALL BE PERFORMED, AS REQUIRED, AFTER WHICH THE CONCRETE DECK SURFACE SHALL BE SCARIFIED TO A DEPTH OF 20mm AND A 60mm LATEX CONCRETE OVERLAY SHALL BE PLACED. SEE SPECIAL PROVISIONS FOR BRIDGE DECK OVERLAY.
2. RECONSTRUCT DECK JOINTS AS NOTED.
3. REPAIR PARAPETS OR REPLACE IF SO NOTED.
4. REPAIR SUBSTRUCTURE AS REQUIRED.
5. CLEAN AND PAINT FIXED BEARINGS.
6. CLEAN AND PAINT ENDS OF STEEL BEAMS AND DIAPHRAGMS AT EXPANSION JOINTS AS NOTED.

** REQUIRED AT CONSTRUCTION JOINT

NOTE K:
CENTER ROLLER BEARINGS MIDWAY BETWEEN THE ℄ OF THE TOP PLATE AND THE ℄ OF THE BASE PLATE AT 10°C. USING THE MIDWAY LINE, SET ROLLERS 5 mm CLOSER TO THE FIXED BEARING FOR EACH 10°C BELOW NORMAL TEMPERATURE OF 10°C AND 5 mm FURTHER FROM THE FIXED BEARING FOR EACH 10°C ABOVE 10°C PER 42 m OF EXPANSION LENGTH FROM THE FIXED BEARING.

NOTE L:
IF THE ADJUSTMENT PLACES THE ROLLER CLOSER THAN 70mm TO THE EDGE OF THE UPPER PLATE OR CLOSER THAN 70mm TO THE ANCHOR BOLTS, THE UPPER PLATE SHALL BE REMOVED AND RESET TO CENTER TOP AND BOTTOM PLATES AT 10°C. ADJUST THE POSITION OF THE TOP PLATE AS DESCRIBED IN NOTE K IF THE TEMPERATURE IS NOT AT 10°C. SEE NOTE M. ROLLER BEARING SHALL BE POSITIONED MIDWAY BETWEEN ℄ OF PLATES.

NOTE M:
JACK BEAM. RAISE BRIDGE ± 6mm. REMOVE THE TOP BEARING PLATE BY AIR-CARBON ARC GOUGING OR BY OTHER ACCEPTABLE MEANS. BURNING OF WELD WILL NOT BE ALLOWED. BOTTOM FLANGE OF BEAM SHALL BE GROUND SMOOTH. REWELD TOP BEARING PLATE IN NEW POSITION. REPOSITION BEARINGS. AFTER BEARINGS HAVE BEEN REPOSITIONED, RETURN THE BRIDGE TO EXACT ORIGINAL ELEVATIONS.

INSTALLATION NOTES

① Install sponge mandrels into positions shown to form flap convolution.

② Install parapet or sidewalk piece (trim roadway flap to fit before applying epoxy).

③ Install continuous seal in roadway.

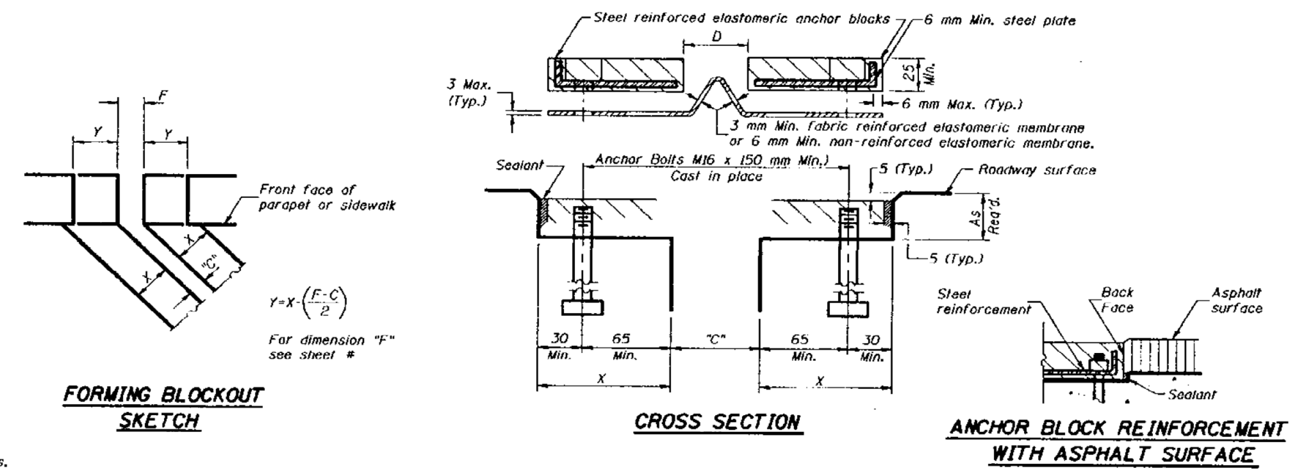
④ Install anchor blocks as indicated.

NOTE A: Maximum spacing of anchor bolts shall be 300 centers.

SKEW LIMITATIONS

The details of the anchor blocks and the elastomeric membrane in the parapet, as shown, are for up to 50° skews.

For skews greater than 50°, the anchor blocks and the elastomeric membrane, installed in accordance with dimension "D", might require modifications to insure a minimum clearance of 40 mm from centerline of anchor studs to edge of parapet opening. The anchor blocks and the elastomeric membrane shall also be installed to the top of the parapet with the anchor studs spaced at ±300 cts.



GENERAL NOTES

Continuous Seal Neoprene Expansion Joint shall consist of molded anchor blocks of elastomer and steel, field assembled over continuous lengths of elastomeric membrane.

The elastomeric membrane shall be premolded with a single or a double upward convolution that will have a "memory" to return to its molded position upon joint closure.

The convolution length shall be such that the extended length will not be greater than the manufactured length when the joint is fully expanded in its design range and will not protrude above the anchor blocks when the joint is fully compressed.

Joint openings shall be adjusted in accordance with Article 503.10(c) of the Standard Specifications when the deck is poured at an ambient temperature other than 10 °C.

The parapet and sidewalk flaps may be furnished factory vulcanized to the roadway membrane provided the centerline of the convolution is maintained and the process and method meet the approval of the Engineer.

All dimensions are in millimeters (mm) except as noted.

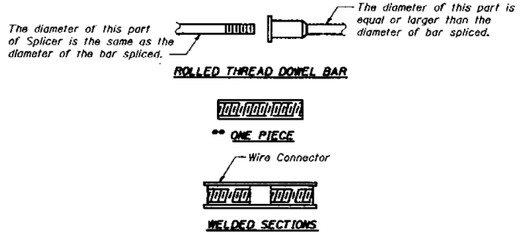
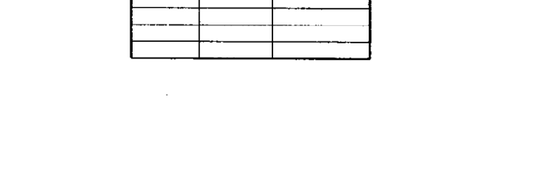
SPLICER DETAIL

Bar Size	No. Req'd. (Splicers)	Location
#15	48	Expansion Joints



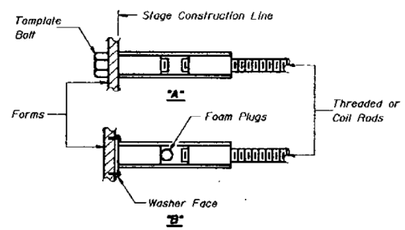
SPLICER ALTERNATIVES

** Heavy Hex Nuts conforming to ASTM A 563, Grade C, D or DH may be used.



BAR SPLICER ASSEMBLY DETAIL FOR INTEGRAL ABUTMENT

20 mm ϕ Bar Splicer Assembly x 1.2 m and 1.8 m Splicer Rods — Minimum Capacity = 100 kN-tension; Minimum Pull-out Strength = 40 kN-tension



INSTALLATION AND SETTING METHODS

"A" : Set splicer by means of a template bolt.
"B" : Set splicer by nailing to wood forms or cementing to steel forms.
(E) : Indicates epoxy coating.

NOTES

Steel Splicer (Coupler) assembly shall be of an approved type and shall develop in tension at least 125 percent of the yield strength of the lapped reinforcement bars.

Steel Splicer rods shall be of minimum 400 MPa yield strength, threaded or coiled full length.

All reinforcement bars shall be lapped and tied to the splicer rods.

Splicer (coupler) assembly shall be epoxy coated in accordance with the requirements for reinforcement bars.

Other systems of similar design may be submitted to the Engineer for approval. Approval shall be based on certified test results from an approved testing laboratory that the proposed splicer (coupler) assembly satisfies the following requirements:

① Minimum Capacity (Tension in kN) $= 1.25 \times 10^{-3} \times f_y \times A_1$

② Minimum *Pull-out Strength (Tension in kN) $= 1.25 \times 10^{-3} \times f_{s\,allow} \times A_1$

Where f_y = Yield strength of lapped reinforcement bars in MPa.
$f_{s\,allow}$ = Allowable tensile stress in lapped reinforcement bars in MPa (Service Load)
A_1 = Tensile stress area of lapped reinforcement bars (mm^2).
* = 28 day concrete

Typical Splicer (Coupler) Assembly Sizes:

- #15 bar lap with 20 mm ϕ Splicer (Coupler) x 610 mm Splicer Rods — Minimum Capacity = 100 kN-tension; Minimum Pull-out Strength = 40 kN-tension
- #20 bar lap with 25 mm ϕ Splicer (Coupler) x 790 mm Splicer Rods — Minimum Capacity = 150 kN-tension; Minimum Pull-out Strength = 60 kN-tension
- #25 bar lap with 30 mm ϕ Splicer (Coupler) x 1.04 m Splicer Rods — Minimum Capacity = 250 kN-tension; Minimum Pull-out Strength = 100 kN-tension
- #30 bar lap with 36 mm ϕ Splicer (Coupler) x 1.37 m Splicer Rods — Minimum Capacity = 350 kN-tension; Minimum Pull-out Strength = 140 kN-tension

Bar splicer assemblies shall be in accordance with Section 508 of the Standard Specifications, except as noted. The furnishing and installation of bar splicer assemblies will be measured and paid for at the contract unit price each for "BAR SPLICERS."

All dimensions are in millimeters (mm) except as noted.

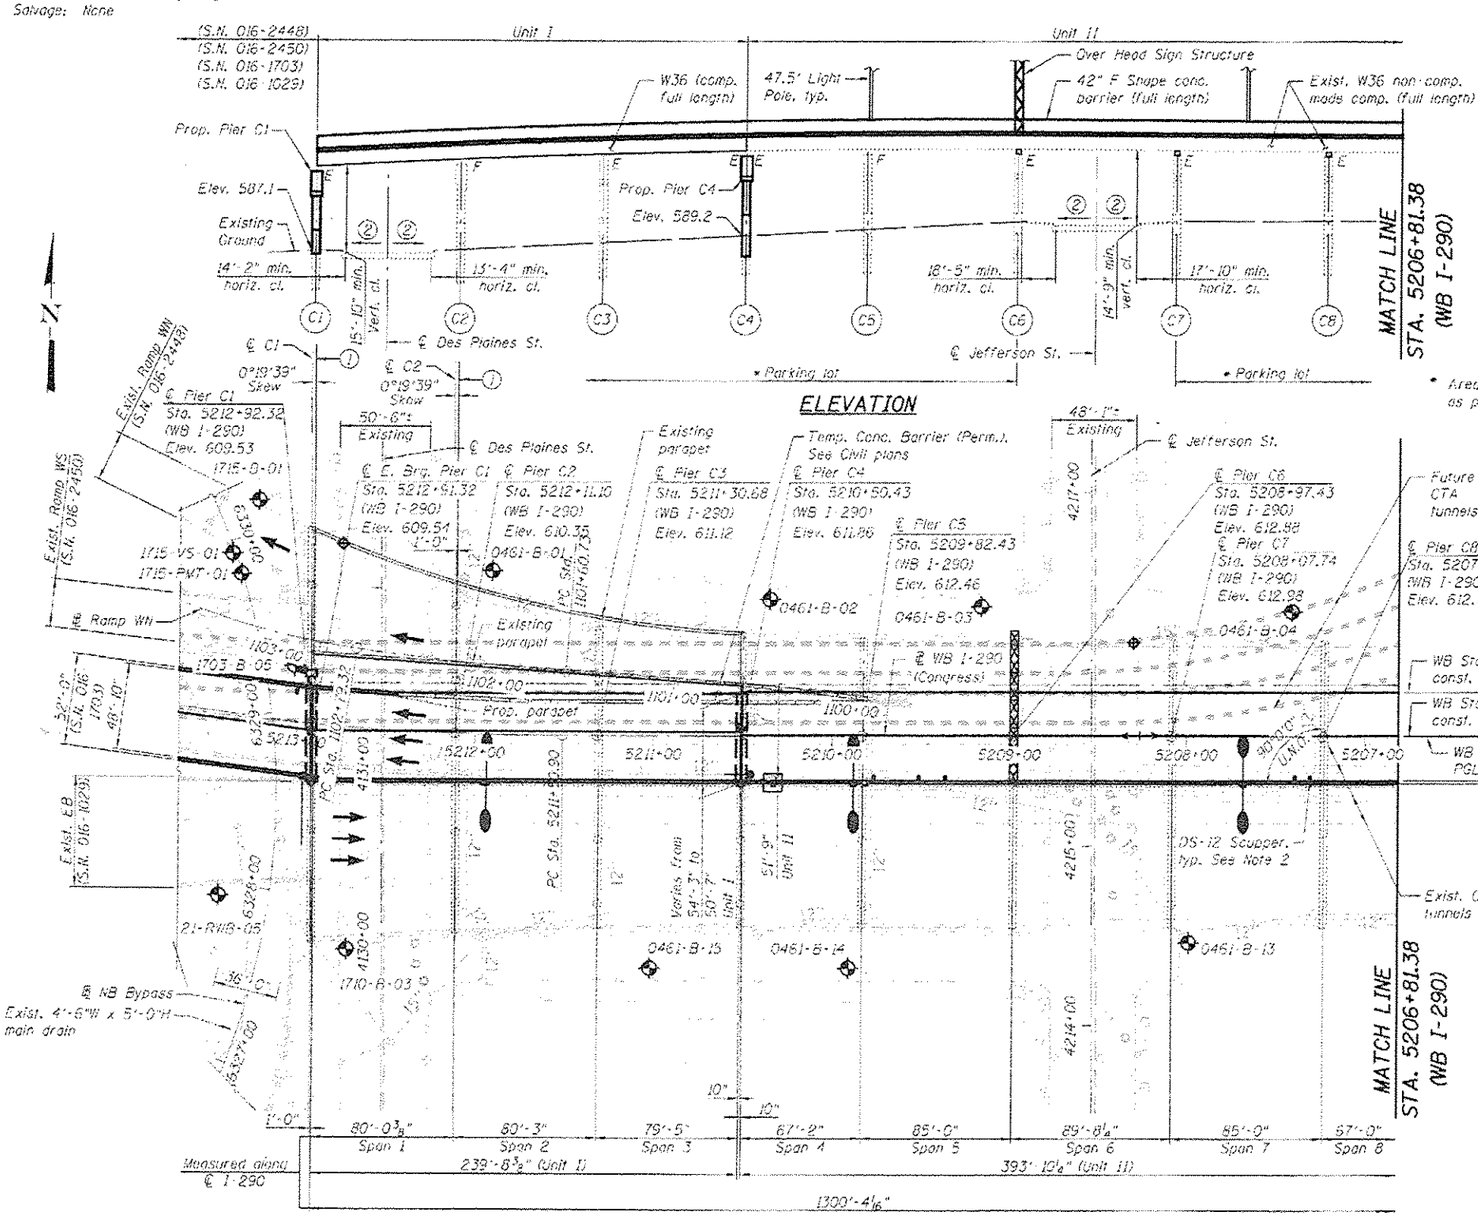
Bench Mark: Square cut at center of door entrance to 707 W. Harrison St; South side of Harrison St. +90' west of west line of Des Plaines. Elevation 597.47. A + cut in the SE anchor bolt at the 11th street light N. of Roosevelt on the W. side of Halsted. Elev. = 594.06.

Existing Structure: S.N. 016-0461 was originally built in 1952 as F.A. Route Number 131, Section 062-2424.4. The existing structure consists of 16 main spans of multi-unit steel continuous multi-beam superstructures with additional entrance and exit ramp spans along Spans 12 and 13. The existing structure has an overall length of approximately 1301'-4" and an average out-to-out width of approximately 162'-0" for the main spans and 25'-0" for the ramp spans. The substructure units are founded on drilled shafts and consist of 17 multi column piers. The existing bridge is to be rehabilitated through a combination of partial removal and replacement, repairs, and partial infill of ramp spans.

Traffic Control: Two lanes of mainline traffic will be maintained utilizing stage construction. Canal Street Entrance Ramp will be closed during stage construction. Ramp traffic will be maintained utilizing stage construction.

Salvage: None



① Line perpendicular to ℄ I-290

② Varies 1.4% to 3.6%

SCOPE OF WORK

1. Replace WB deck in Spans 1 through 11 with a composite deck.
2. Repair WB deck in Spans 12 through 15.
3. Repair WB superstructure in Spans 4 through 15. (End diaphragms).
4. Remove and replace WB superstructure between Piers C1 & C4.
5. Replace WB bridge deck expansion joints with modular type at Piers C1, C9 & C12 and strip seal type at Piers C4 & 14N.
6. Replace high profile rocker bearings with elastomeric bearings at WB Piers C3, C6, C7, C8, C11, C13, C15 & C16.
7. Replace nested roller bearings with high-load multi-rotational bearings at center-column of piers C1 thru C14.
8. Repair all WB substructure units except Piers C1, C4, C9, C12 & C17.
9. Reconstruct concrete columns and caps of WB Piers C1, C4, C9 & C12 and reconfigure beam seats at Piers C1 through C4 to accommodate the proposed WB deck geometry.
10. Remove and replace existing Chain Link Fence in Spans 14 through 16 (See roadway plans).
11. Remove and replace drainage system in WB Spans 1 through 11 (See drainage plans). Clean and/or repair the existing scupper system (grates and pipes) in Spans 12 through 15.
12. Remove and replace underpass lighting over the existing roadways (See electrical plan).

** Existing light poles in Unit IV to be removed and replaced and to utilize existing light support. The Contractor shall provide all precautions necessary to prevent damage to the existing light support during the removal work. If the existing light support is damaged such as the new light pole cannot be installed properly, contractor must provide detail to match existing light support to be approved by the engineer. All Cost of new light support shall be included in Concrete Superstructure. For existing light support detail, See sheet 178 of 194 of existing plans for S.N. 016-0461.

Notes:
1. For ℄ Pier & ℄ I-290 Intersect Stationing, see sheet S2-5.
2. For Curve Data, Geometric Layout, and Highway Classification, see sheet S2-5.
3. For Profile Grades, see sheet S2-6 and S2-7.
4. For Protective Shield limits, see sheet S2-20.
5. Skew is taken from a line normal to ℄ I-290.
6. Existing utilities attached to structure will be maintained/relocated during construction.

		CONTRACT NO. 60X78		
		ILLINOIS FED. AID PROJECT		

0160461-60X78-S002-GPE.dgn

GENERAL NOTES:

1. Fasteners shall be ASTM A325 Type 1, hot dipped galvanized bolts. Bolts $\frac{7}{8}$" ϕ, holes $\frac{15}{16}$" ϕ, unless otherwise noted.

2. Calculated weight of Structural Steel = 390,250 lbs. (Gr. 50)
   = 2,890 lbs. (Gr. 36)

3. All structural steel except for steel in Temporary Support System shall be hot-dip galvanized (see special provisions).

4. The Contractor shall test the existing welds by non-destructive methods within 2 ft. of the end of the existing cover plates for cracks after removal of the existing concrete deck. Dye penetrant (PT), magnetic particle (MT), or other approved testing method shall be performed by qualified personnel approved by the Engineer. If cracks are found, report them to the Bureau of Bridges and Structures for disposition. The cost of testing is included in Removal of Existing Concrete Deck. The cost of crack repair, if necessary, will be paid for according to Article 109.04 of the Standard Specifications.

5. No field welding is permitted except as specified in the contract documents.

6. Reinforcement bars designated (E) shall be epoxy coated.

7. Prior to pouring the new concrete deck, all heavy or loose rust, loose mill scale, and other loose or potentially detrimental foreign material shall be removed from the surfaces in contact with concrete. Tightly adhered paint may remain unless otherwise noted. Removal shall be accomplished by methods that will not damage the steel and the cost will be included in the pay item covering removal of the existing concrete.

   As directed by the Engineer, existing construction accessories welded to the top flange of beams and girders shall be removed. The weld areas shall be ground flush and inspected for cracks using magnetic particle testing (MT) or dye penetrant testing (PT) by qualified personnel approved by the Engineer. Any cracks that cannot be removed by grinding $\frac{1}{4}$ in. deep shall be identified and reported to the Bureau of Bridges and Structures for further disposition. The cost of removing welded accessories, grinding and inspecting weld areas and grinding cracks will be paid for according to Article 109.04 of the Standard Specifications.

8. If the Contractor elects to use cantilever forming brackets on the exterior beams or girders, the brackets shall be placed at the same locations as required for the hardwood blocks in Article 503.06(b) of the Standard Specifications. If additional cantilever forming brackets are required, hardwood blocking shall be wedged between the exterior and first interior beam at each of these additional bracket locations.

9. Plan dimensions and details relative to existing plans are subject to nominal construction variations. The Contractor shall field verify existing dimensions and details affecting new construction and make necessary approved adjustments prior to construction or ordering of materials. Such variations shall not be cause for additional compensation for a change in scope of the work, however, the Contractor will be paid for the quantity actually furnished at the unit price bid for the work.

10. Bearing seat surfaces shall be constructed or adjusted to the designated elevations within a tolerance of $\frac{1}{8}$" (0.01 ft.). Adjustment shall be made either by grinding the surface or by shimming the bearings.

11. Concrete Sealer shall be applied to the designated areas of the Piers C1, C4, C9 & C12.

12. The existing structural steel coating contains lead. The Contractor shall take appropriate precautions to deal with the presence of lead on this project.

13. Cleaning and field painting of structural steel shall be done under a separate painting contract, unless noted otherwise.

14. Existing structural steel shall only be cleaned and painted as required by the Special Provision "Cleaning and Painting Contact Surface Areas of Existing Steel Structures".

15. Slipforming of the parapet is not allowed.

16. Contractor shall coordinate deck construction work between Piers 10 & 11 in Unit III with MEGA Bus. The Contractor shall install deck inserts underside of the deck for the future lighting work. Deck incerts will be provided by MEGA Bus and Contractor shall ask the Engineer in advance for these incerts. This work shall not be paid separately but shall be included with Concrete Superstructure.

INDEX OF SHEETS

STRUCTURAL ASSESSMENT OF EXISTING STRUCTURE NOTES:

1. In order to construct proposed superstructure & substructure elements, Contractor may elect to support temporary construction material and/or equipment, on the existing structures in the vicinity of the proposed structure. The Contractor shall submit Structural Assessment Report(s) for approval prior to beginning the work. See Special Provision.

2. An Existing Structure Information Package (ESIP) will be provided by the Department to the Contractor upon request.

3. The Contractor shall retain the services of an engineering firm, prequalified in the IDOT consultant selection category of Highway Bridge (Complex), for preparation of the Structural Assessment Report(s). Contractor's pre-approval shall not be applicable for this project. See Special Provision.

   Current Ratings on File for Existing Structures are as follows:

   S.N. 016-0461 (I-290 (Congress) Viaduct over Des Plaines St. to Canal St.)
   Inventory: HS 21.3
   Operating: HS 34.3
   Live Load Restrictions: None

   S.N. 016-1029 (EB I-290 over I-90/94)
   Inventory: HS 17.2
   Operating: HS 28.7
   Live Load Restrictions: None

   S.N. 016-1030 (WB I-290 over I-90/94)
   Inventory: HS 14.7
   Operating: HS 24.5
   Live Load Restrictions: None

   S.N. 016-2448 (Ramp WB I-290 to NB I-90/94 over Des Plaines Ave.)
   Inventory: HS 32-1 (HS 20+MOD)
   Operating: HS 53-5 (HS 20+MOD)
   Live Load Restrictions: None

   S.N. 016-2450 (Ramp WB I-290 to SB I-90/94 over I-90/94)
   Inventory: HS 14.2
   Operating: HS 23.6
   Live Load Restrictions: None

4. Inventory and Operating Ratings and Live Load Restrictions are provided for information only. Inventory and Operating Ratings are based on HS loading and configuration. Live Load Restrictions are based on Illinois legal loads and configurations. The Ratings and Live load Restrictions are not necessarily representative of capacities to support the Contractor's equipment.

5. The contractor is advised that the existing structures may contain members in deteriorated conditions with reduced load carrying capacities. It is the Contractor's responsibility to account for the condition of existing structures when developing construction procedures for using them to support construction loads and for the complete or partial removal or replacement of the structure.

6. The contractor shall verify that the structural demands of the applied loads due to the Contractor's means and methods will not exceed the available capacity of the structure at the time loads are applied. Most likely, the Contractor will be required to provide additional shoring under the existing bridges (or other methods of retrofitting) to support construction loads. Design, installation and subsequent removal of such shoring system will be the responsibility of the Contractor and will not be paid separately.

7. The Contractor shall use caution and not damage any component of the existing structure. Upon completion of work and prior to allowing traffic back on the existing structure the contractor must restore existing structure in its original condition.

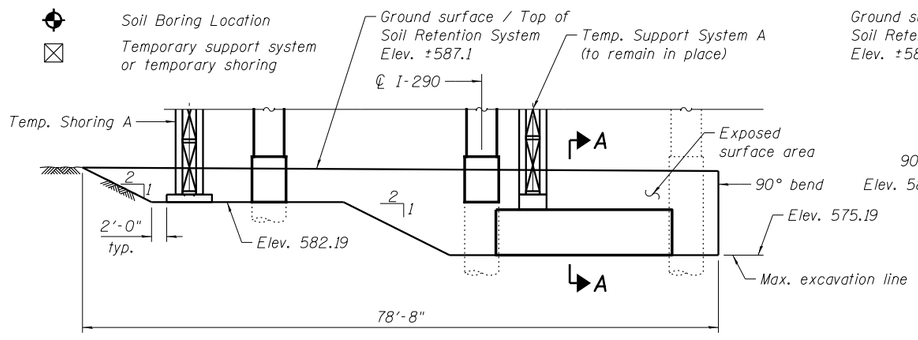
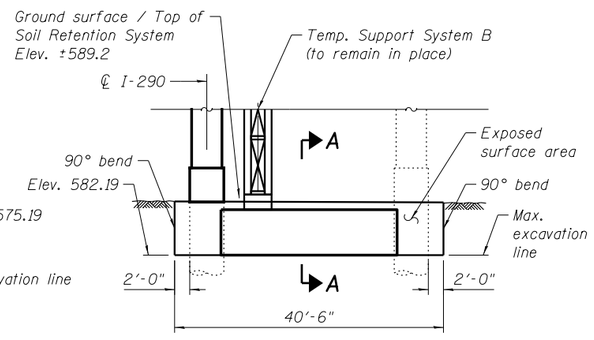
SUBSTRUCTURE LAYOUT PLAN - 1



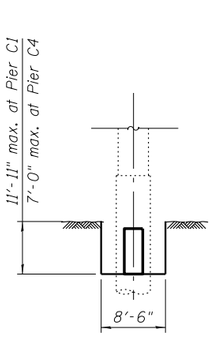
ELEVATION - TEMPORARY SOIL RETENTION SYSTEM AT EXISTING PIER C1

(Looking East)



ELEVATION - TEMPORARY SOIL RETENTION SYSTEM AT EXISTING PIER C4

(Looking East)



SECTION A-A

Notes:

1. *Temporary Soil Retention System required for existing pier removal and Temporary Support System. See sheets S2-10 thru S2-15.*
2. *Temporary Soil Retention System to be left in place. Required for Temporary Support System. To be removed in future contract (by others).*
3. *A cantilever sheet piling design does not appear feasible and additional members or other retention systems may be necessary. The Contractor shall submit a temporary soil retention system design including plan details and calculations for review and acceptance by the Engineer.*
4. *The Contractor shall take precautions to protect existing utilities and foundations during construction of the bridge. The utilities were located based on SUE and utility supplier information available at design.*
5. *Temporary soil retention system shall avoid existing roadway drainage.*

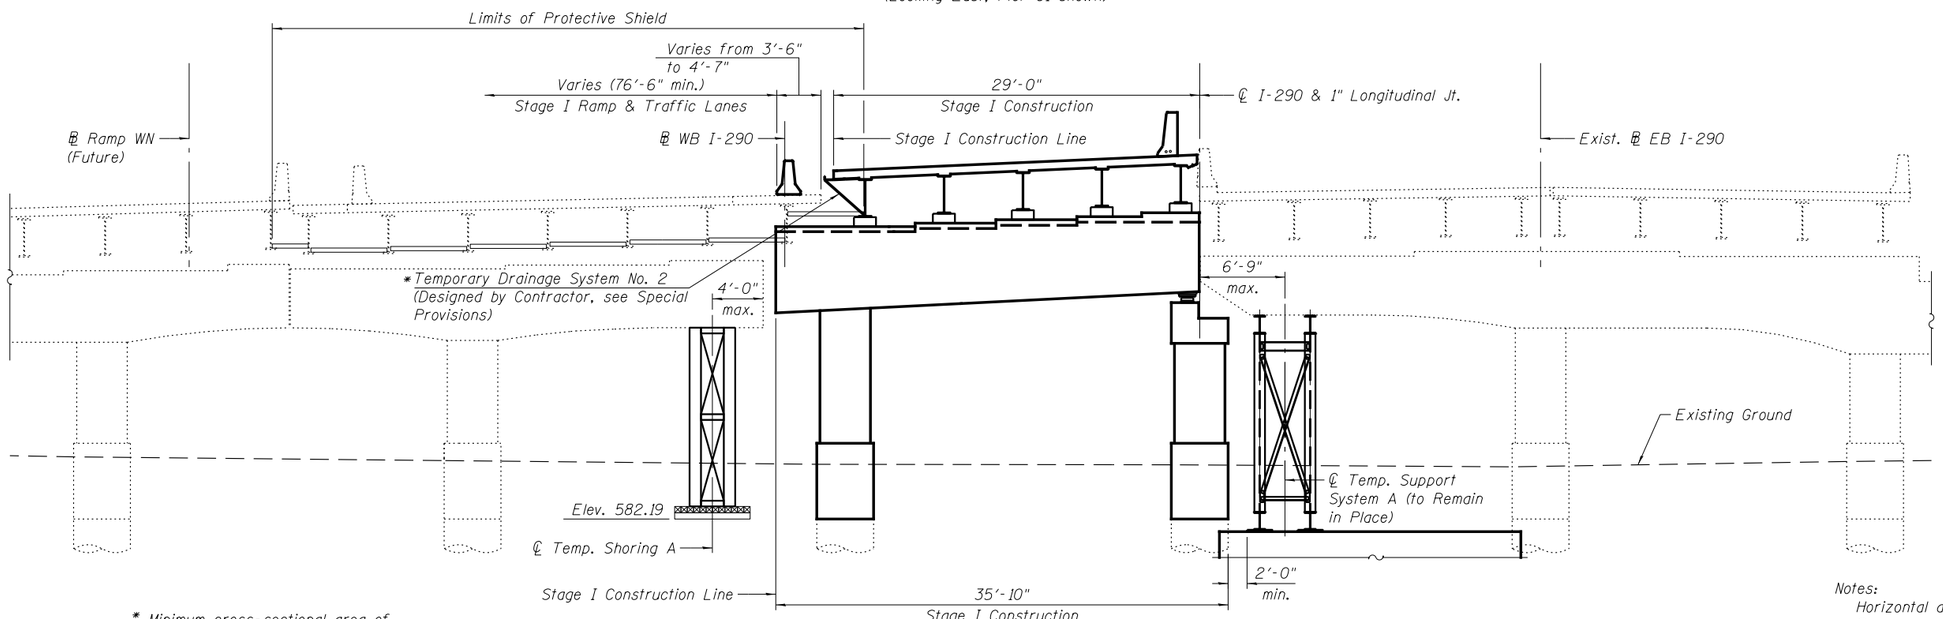
STAGE I REMOVAL - UNIT I

(Looking East, Pier C1 shown)



STAGE I CONSTRUCTION - UNIT I

(Looking East, Pier C1 shown)

* Minimum cross-sectional area of Temporary Drainage System = 0.79 sq. ft.

STAGE I REMOVAL - UNIT I

1. Install temporary concrete barrier as shown to locate construction work area on the south side of the existing structure.
2. Install Temporary Shoring and Temporary Support System (to Remain in Place) for pier caps at Pier C1 and for existing westbound Beam No. 20. For temporary support reaction summary and details, See S2-17 for Removal Details.
3. Install Temporary Soil Retention System at Pier C1.
4. Remove existing utilities and drainage system attached to substructure.
5. Remove the existing structure as indicated.

STAGE I CONSTRUCTION - UNIT I

1. Repair existing Piers C2 and C3. Construct Piers C1 and C4.
2. Erect Beams 14 through 18.
3. Construct reinforced concrete deck.
4. Perform bridge deck grooving.
5. Apply protective coat for the bridge deck and parapet.
6. Provide a temporary drainage system. Connection of formwork to beam must be designed to withstand additional loading.

LEGEND

Removal of Existing Structures No. 2

BILL OF MATERIAL

Item	Unit	Quantity
Temporary Drainage System No. 2	L. Sum	1

Notes:

Horizontal dimensions are measured perpendicular to ℄ I-290.

Stage removal and stage construction lines are different for the superstructure and substructure.

Contractor shall provide Temporary Shoring for the existing pier cap and existing Beam No. 20. The Temporary Shoring shall be approved by the Engineer. Such approval will not relieve the Contractor of responsibility for the safety of the structure. See Special Provisions.

For quantity of Temporary Concrete Barrier, see roadway plans.

For Temporary Shoring and Temporary Support System (to remain in place) reactions and quantities, see sheets S2-16 and S2-17, respectively.

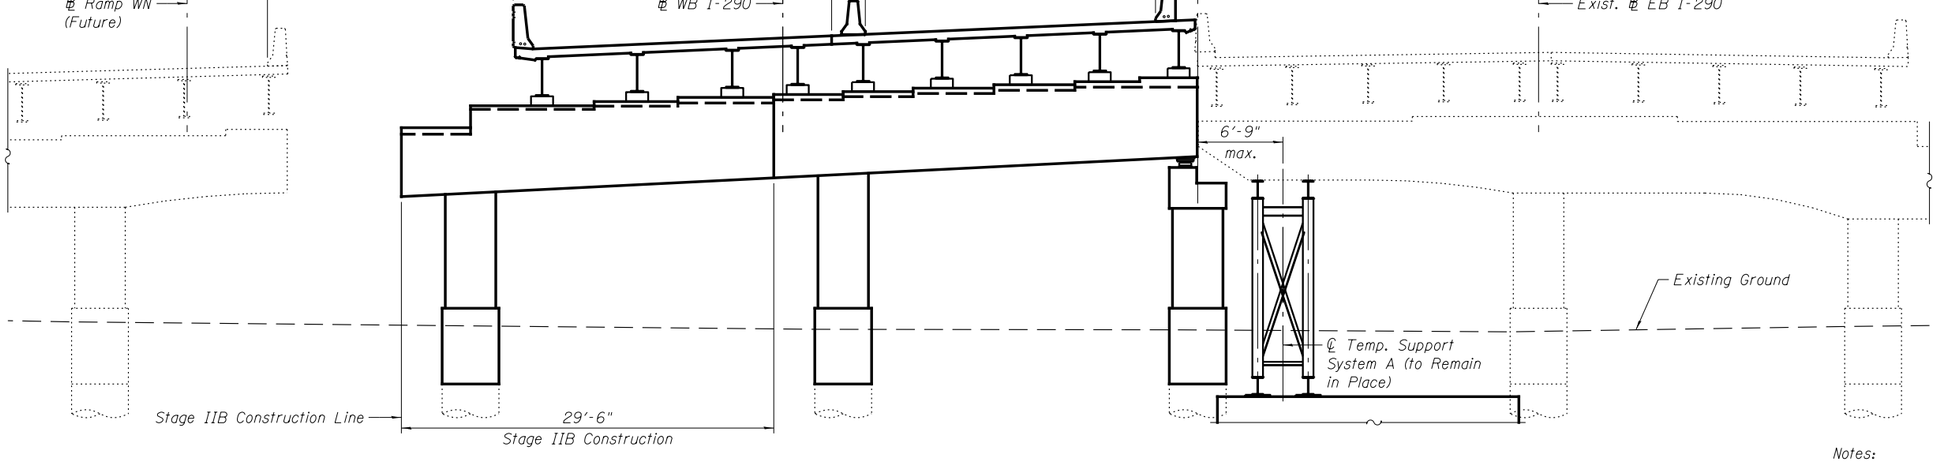
STAGE IIB REMOVAL - UNIT I

(Looking East, Pier C1 shown)



STAGE IIB CONSTRUCTION - UNIT I

(Looking East, Pier C1 shown)

STAGE IIA TRAFFIC - UNIT I

1. Install temporary concrete barrier on the new deck to locate IIA Traffic and construction work area on the Stage I constructed portion of the bridge.

STAGE IIB REMOVAL - UNIT I

1. Begin removal operations on Unit I upon completion of work on Unit II and III under Stage IIA traffic.
2. Remove existing utilities and drainage system attached to substructure.
3. Remove the existing structure as indicated.
4. Remove Temporary Shoring A.

STAGE IIB CONSTRUCTION - UNIT I

1. Repair and rehabilitate existing Piers C2 and C3. Construct Piers C1 and C4.
2. Erect Beams 10 through 13.
3. Construct reinforced concrete deck.
4. Perform bridge deck grooving.
5. Apply protective coat for the bridge deck and parapet.
6. Place temporary pavement markings on the top of deck for staged traffic.

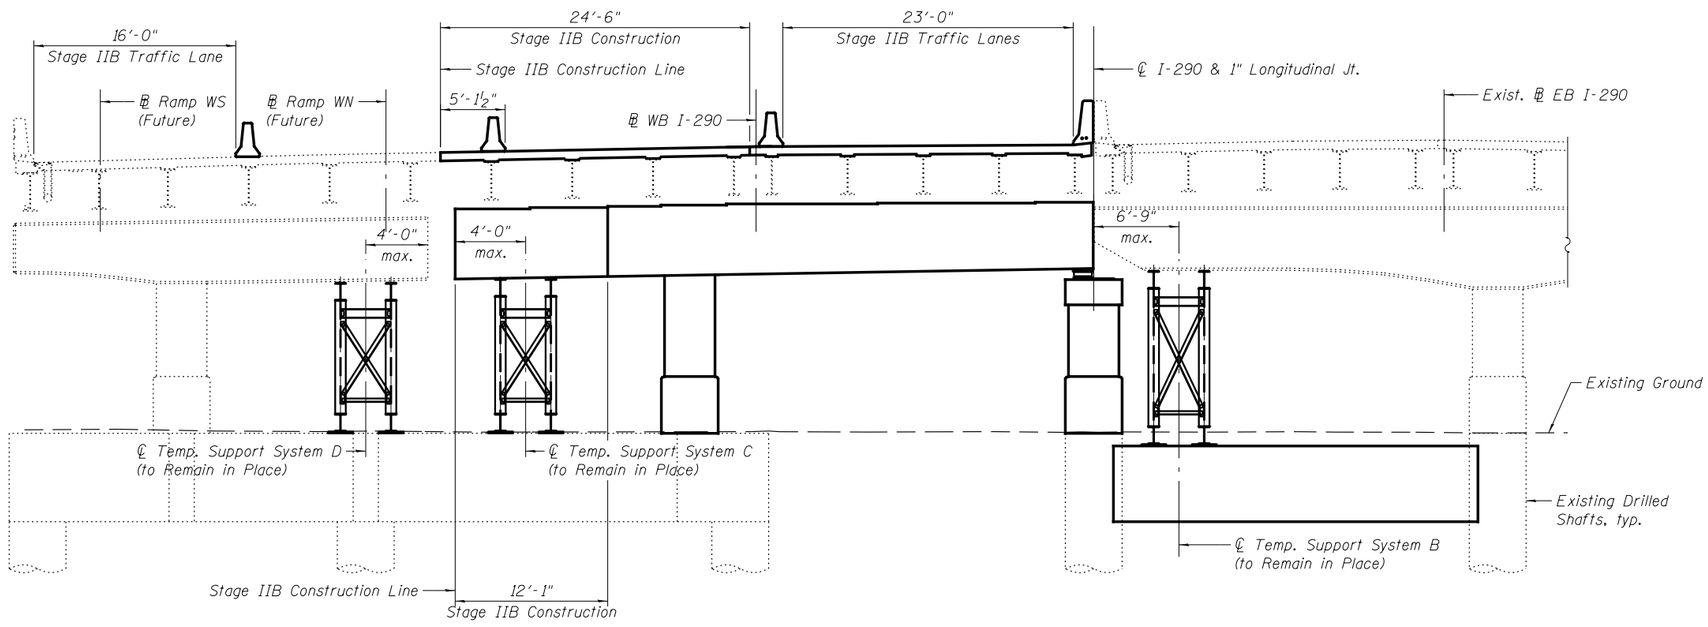
STAGE IIB REMOVAL - UNIT II

(Looking East, Pier C4 shown)



STAGE IIB CONSTRUCTION - UNIT II

(Looking East, Pier C4 shown)

STAGE IIA TRAFFIC - UNIT II

1. Install temporary concrete barrier on the new and existing deck to locate Stage IIA Traffic and construction work area on the Stage I constructed portion of the bridge. Refer to Roadway Plans for additional details on Stage IIA Traffic.
2. Construction work to be completed during Stage IIA Traffic includes the reconstruction of Pier C9, bearing replacement, deck expansion joint and installation of shear studs within limits of deck expansion joint.

STAGE IIB REMOVAL - UNIT II

1. Relocate temporary concrete barrier on the new and existing deck to locate Stage IIB Traffic and construction work area on the Stage I constructed portion of the bridge.
2. Install Temporary Support System D (to Remain in Place) under existing pier cap. Install temporary shoring and cribbing for existing westbound Beams 6 and 7.
3. Remove existing utilities and drainage system attached to substructure.
4. Remove the existing structure as indicated.

STAGE IIB CONSTRUCTION - UNIT II

1. Repair existing cap, columns and reconstruct beam seats at Piers C5 thru C8. Construct Piers C4 and C9.
2. Remove and Replace existing bearings.
3. Install Shear Stud Connectors to existing beams and set in new bearings.
4. Construct reinforced concrete deck.
5. Perform bridge deck grooving.
6. Apply protective coat for the bridge deck and parapet.

LEGEND

Removal of Existing Concrete Deck

Removal of Existing Structures No. 2

Notes:

Horizontal dimensions are measured perpendicular to ℄ I-290.

Stage removal and stage construction lines are different for the superstructure and substructure.

Contractor shall provide temporary shoring and cribbing for the existing westbound Beams 6 and 7. Cost included with Jack and Remove Existing Bearings. See Special Provisions.

For quantity of Temporary Concrete Barrier, see roadway plans.

For Temporary Shoring and Temporary Support System (to Remain in Place) reactions and quantities, see sheets S2-16 and S2-17, respectively.

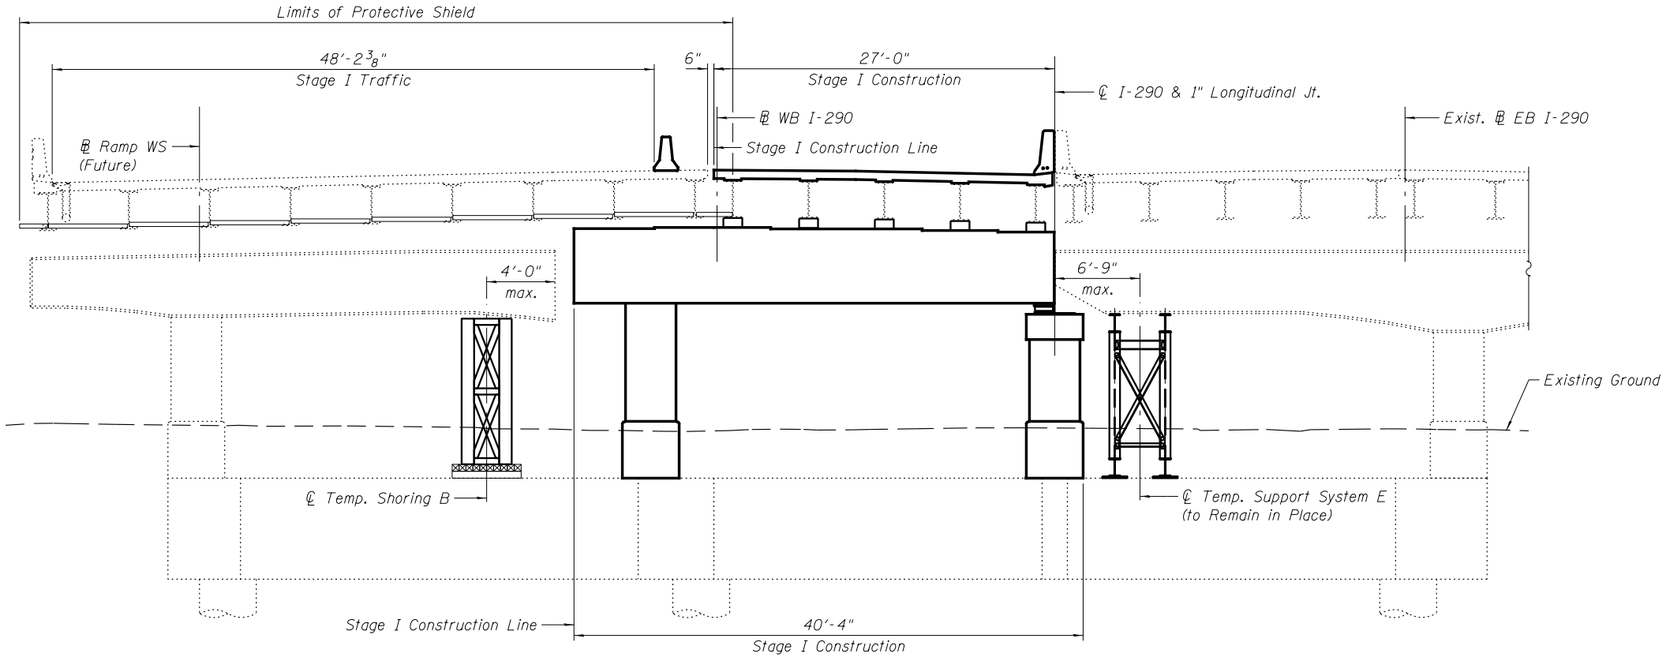
STAGE I REMOVAL - UNIT III

(Looking East, Pier C9 shown, Pier C12 similar)



STAGE I CONSTRUCTION - UNIT III

(Looking East, Pier C9 shown, Pier C12 similar)

STAGE I REMOVAL - UNIT III

1. Install temporary concrete barrier as shown to locate construction work area on the south side of the existing structure.
2. Install temporary shoring and cribbing for existing westbound Beams 8 thru 14 and Temporary Supports E System (to Remain in Place) and Temporary Shoring B for existing Pier Cap.
3. Remove existing utilities and drainage system attached to substructure.
4. Remove the existing structure as indicated.

STAGE I CONSTRUCTION - UNIT III

1. Repair existing cap, columns and reconstruct beam seats at Piers C10 and C11. Construct Piers C9 and C12.
2. Remove and Replace existing bearings.
3. Install Shear Stud Connectors to existing beams and set in new bearings.
4. Construct reinforced concrete deck.
5. Perform bridge deck grooving.
6. Apply protective coat for the bridge deck and parapet.
