782001-01	CURB REFLECTORS
782006-01	GUARDRAIL AND BARRIER WALL REFLECTOR MOUNTING DETAILS
643001-03	SAND MODULE IMPACT ATTENUATORS

GENERAL NOTES

1. UTILITIES KNOWN TO HAVE FACILITIES WITHIN THE PROJECT AREA:

   *CITY OF ALTON - SANITARY SEWER
   *CITY OF ALTON - LIGHTING
   *AMEREN ILLINOIS - GAS & ELECTRIC
   *AT&T ILLINOIS - COMMUNICATIONS
   *CHARTER COMMUNICATIONS, INC. - CABLE TV
   *EVERSTREAM GLC HOLDING COMPANY LLC - COMMUNICATIONS
   *ILLINOIS AMERICAN WATER COMPANY - WATER & SANITARY SEWER

2. THE RESIDENT ENGINEER SHALL VERIFY THE EXISTENCE OF HIGHWAY LIGHTING AND/OR INTELLIGENT TRANSPORTATION SYSTEMS (I.T.S) UTILITIES WITHIN THE PROJECT LIMITS. IF HIGHWAY LIGHTING AND/OR I.T.S EXISTS WITHIN THE PROJECT LIMITS, AND IF THESE ITEMS REQUIRE LOCATING, THE CONTRACTOR SHALL BE DIRECTED TO DO SO ACCORDING TO SECTION 803 OF THE STANDARD SPECIFICATIONS. THIS WORK SHALL BE PAID FOR ACCORDING TO ARTICLE 109.04 OF THE STANDARD SPECIFICATIONS.

3. CHANGEABLE MESSAGE SIGNS SHALL BE REQUIRED FOR THIS PROJECT. THEY SHALL BE PLACED 2 WEEKS PRIOR TO THE START OF CONSTRUCTION AND SHALL REMAIN UP FOR THE DURATION OF THE PROJECT. THE CMS SHALL BE LOCATED AS DETAILED IN THE TRAFFIC CONTROL PLANS OR AS DIRECTED BY THE ENGINEER.

4. THE DEPARTMENT STRONGLY ENCOURAGES THE PRIME CONTRACTOR AND THEIR APPROVED SUB-CONTRACTORS TO HIRE MINORITY, WOMEN, AND DISADVANTAGED INDIVIDUALS FROM ITS FEDERALLY FUNDED HIGHWAY CONSTRUCTION CAREERS TRAINING PROGRAM (HCCTP) TO HELP MEET WORKFORCE AND TRAINEE GOALS. THIS PROGRAM IS TRAINING MINORITIES, WOMEN, AND DISADVANTAGED INDIVIDUALS IN HIGHWAY CONSTRUCTION-RELATED SKILLS, E.G., MATH FOR THE TRADES, JOB READINESS, TECHNICAL SKILLS COURSEWORK (CARPENTRY, CONCRETE FLATWORK, BLUEPRINT READING, SITE WORK, TOOLS USE, ETC.) AND OSHA 10 HOUR CERTIFICATION, TO PREPARE THEM FOR A CAREER IN THE HIGHWAY CONSTRUCTION TRADES. GRADUATES ARE WELL-TRAINED AND READY TO BECOME PRODUCTIVE ENTRY-LEVEL CONSTRUCTION WORKERS. CONTACT THE DISTRICT 8 EEO OFFICE AT 618-346-3360 AND/OR THE HCCTP COORDINATOR AT 618-874-6528 TO LEARN MORE ABOUT THE PROGRAM AND FOR ASSISTANCE IN MEETING WORKFORCE AND TRAINEE GOALS.

5. ALL TURF AREAS DISTURBED BY THE CONTRACTOR SHALL BE SEEDED WITH THE APPROPRIATE EROSION CONTROL, AS DIRECTED BY THE ENGINEER, AT THE CONTRACTOR'S EXPENSE.

6. THE PAVEMENT MARKINGS SHOWN IN THE PLANS ARE APPROXIMATE. THE LOCATION OF THE PROPOSED MARKING SHALL MATCH EXISTING LOCATIONS AS DIRECTED BY THE ENGINEER.

7. THE FOLLOWING MIXTURE REQUIREMENTS ARE APPLICABLE FOR THIS PROJECT:

MIXTURE USE	HMA BINDER	POLY HMA SURFACE	HMA SHOULDERS (LOWER)	HMA SHOULDERS (SURFACE)
AC/PG	PG 64-22	SBS PG 70-28	PG 64-22	PG 64-22
DESIGN AIR VOIDS	4% @ N90	4% @ N90	4% @ N70	4% @ N90
MIXTURE COMPOSITION: (GRADATION)	IL 9.5 FG	IL 9.5	IL 19.0	IL 9.5
FRICTION AGGREGATE	MIXTURE C	MIXTURE D	MIXTURE B	MIXTURE D
QUALITY MANAGEMENT PROGRAM	QC/QA	QC/QA	QC/QA	QC/QA
MATERIAL TRANSFER DEVICE (REQUIRED)	NO	NO	NO	NO

PLAN QUANTITIES FOR HOT-MIX ASPHALT ITEMS ARE CALCULATED USING A UNIT WEIGHT OF 112LB/SQ YD/IN (59.8 KG/SQ M/25MM THICKNESS).

8. THE CONTRACTOR SHALL PROVIDE POSITIVE AND ADEQUATE DRAINAGE AT ALL TIMES.

9. HOT-MIX ASPHALT SURFACE REMOVAL WILL BE CONTROLLED AT THE EDGE OF PAVEMENT AND PAVEMENT CROSS SLOPES WILL BE REESTABLISHED FROM THESE POINTS.

10. FACTORS USED FOR ESTIMATING PLAN QUANTITIES ARE AS FOLLOWS AND SHALL NOT BE USED FOR THE BASIS OF FINAL QUANTITIES:

AGGREGATE	2.05 TON/CU YD
BITUMINOUS MATERIALS TACK COAT	0.0002 TON/SQ YD (EXISTING) OR 0.0001 TON/SQ YD (NEW)
EARTHWORK SHRINKAGE FACTOR	15%
SHORT TERM PAVEMENT MARKING	10 FT/100FT OF APPLICATION

MAINTENANCE OF TRAFFIC GENERAL NOTES

1. MAINTENANCE OF TRAFFIC PLANS SHALL SERVE AS A GUIDE FOR THE SAFE DIVERSION OF TRAFFIC DURING THE EXECUTION OF THIS CONTRACT. THE CONTRACTOR MAY MODIFY THE MAINTENACE OF TRAFFIC PLANS TO MEET CONSTRUCTION NEEDS BUT NOT AT THE EXPENSE OF PUBLIC SAFETY OR CONVENIENCE, ANY CHANGES TO THE TRAFFIC CONTROL PLANS SHALL BE SUBMITTED TO THE ENGINEER FOR APPROVAL.

2. TEMPORARY PAVEMENT MARKING TAPE, TYPE IV SHALL BE USED FOR ANY SHORT TERM PAVEMENT MARKINGS ON FINAL SURFACES.

3. ALL TRAFFIC CONTROL DEVICES SHALL BE REFLECTORIZED PRIOR TO INSTALLATION AND CLEANED AS SPECIFIED IN THE TRAFFIC CONTROL SPECIAL PROVISIONS OR AS DIRECTED BY THE ENGINEER.

4. SEE STRUCTURAL PLANS FOR BRIDGE REPAIR INFORMATION.

5. ALL EXISTING AND TEMPORARY PAVEMENT MARKINGS FROM PRIOR STAGES THAT ARE IN CONFLICT SHALL BE REMOVED.

6. EXISTING RAISED REFLECTIVE PAVEMENT MARKER REFLECTORS THAT CONFLICT WITH THE REVISED TRAFFIC PATTERNS, SHALL BE REMOVED FROM THE EXISTING CASING LOCATED IN THE PAVEMENT. THIS WORK WILL BE PAID FOR AT THE CONTRACT UNIT PRICE PER EACH FOR RAISED REFLECTIVE PAVEMENT MARKER, REFLECTOR REMOVAL.

SUGGESTED SEQUENCE OF OPERATIONS

STAGE 1

1. INSTALL TEMPORARY TRAFFIC CONTROL DEVICES, TEMPORARY SIGNAGE, TEMPORARY CONCRETE BARRIER WALL AND DELINEATION, TEMPORARY IMPACT ATTENUATORS & TEMPORARY PAVEMENT MARKINGS & UTILIZE HIGHWAY STANDARD 701423 TO CLOSE THE OUTSIDE LANE AND SHOULDER OF IL 111/IL 3 AT SN 060-0120 AS SHOWN IN THE STAGE 1 STAGING PLANS OR AS DIRECTED BY THE ENGINEER.

2. UTILIZE HIGHWAY STANDARD 701501 FOR ANY TRAFFIC CONTROL REQUIRED ALONG N RODGERS AVE AND BLOOMER DR.

3. PERFORM THE STAGE 1 PORTION OF THE STRUCTURE IMPROVEMENTS AS SHOWN ON THE STRUCTURE PLANS.

4. CONSTRUCT THE OUTSIDE PORTION OF THE PAVEMENT CONNECTOR, BUTT JOINTS, PAVED SHOULDER, GUARDRAIL AND CONCRETE SHOULDER CURB AS SHOWN ON THE ROADWAY PLAN.

STAGE 2

1. RELOCATE TEMPORARY TRAFFIC CONTROL DEVICES, TEMPORARY SIGNAGE, TEMPORARY CONCRETE BARRIER WALL AND DELINEATION, TEMPORARY IMPACT ATTENUATORS & TEMPORARY PAVEMENT MARKINGS & UTILIZE HIGHWAY STANDARD 701423 TO CLOSE THE INSIDE LANE AND SHOULDER OF IL 111/IL 3 AT SN 060-0120 AS SHOWN IN THE STAGE 2 STAGING PLANS OR AS DIRECTED BY THE ENGINEER.

2. UTILIZE HIGHWAY STANDARD 701501 FOR ANY TRAFFIC CONTROL REQUIRED ALONG N RODGERS AVE AND BLOOMER DR.

3. PERFORM THE STAGE 2 PORTION OF THE STRUCTURE IMPROVEMENTS AS SHOWN ON THE STRUCTURE PLANS.

4. CONSTRUCT THE INSIDE PORTION OF THE PAVEMENT CONNECTOR, BUTT JOINTS, PCC MEDIAN, AND MEDIAN CONCRETE BARRIER AS SHOWN ON THE ROADWAY PLAN.

POST-STAGE

1. UTILIZE HIGHWAY STANDARD 701426 TO PLACE FINAL PAVEMENT MARKINGS.

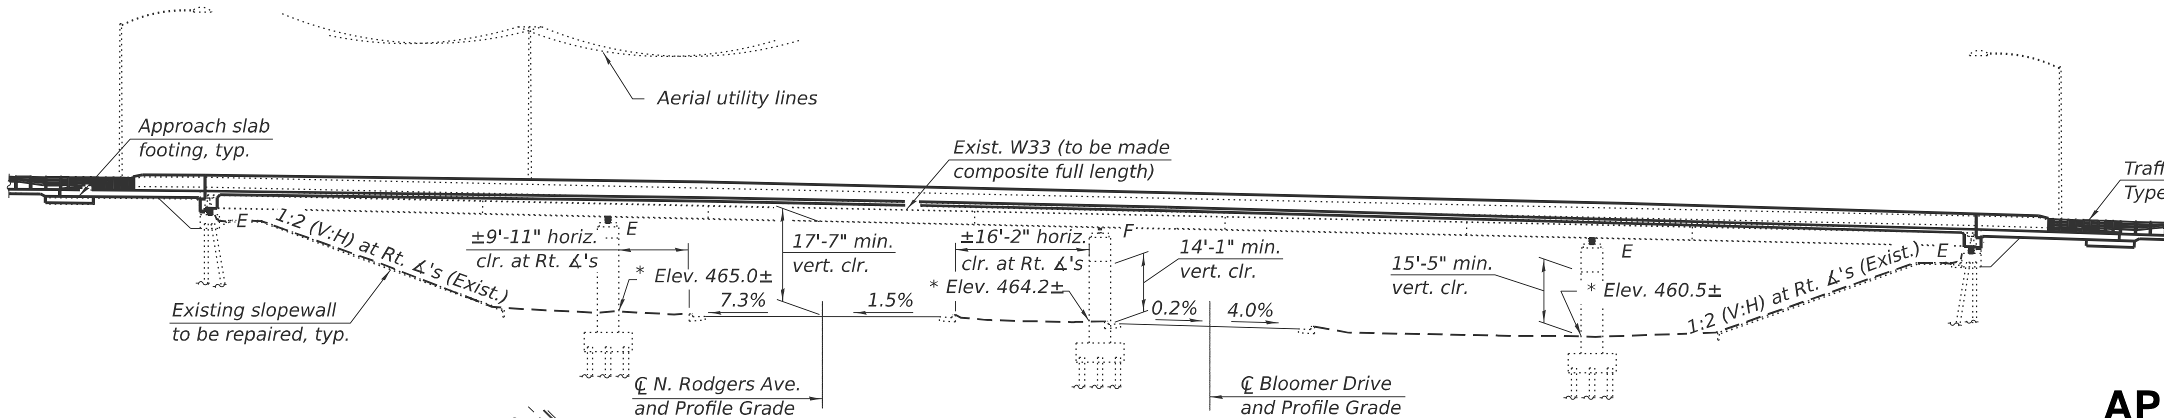
Benchmark: BM L2 - Set RR spike in north side of power pole at the southeast corner of Bloomer Drive and Ed Voumard Drive intersection, Sta. 1303+02.16. 19.86' Rt., Elev. 461.01

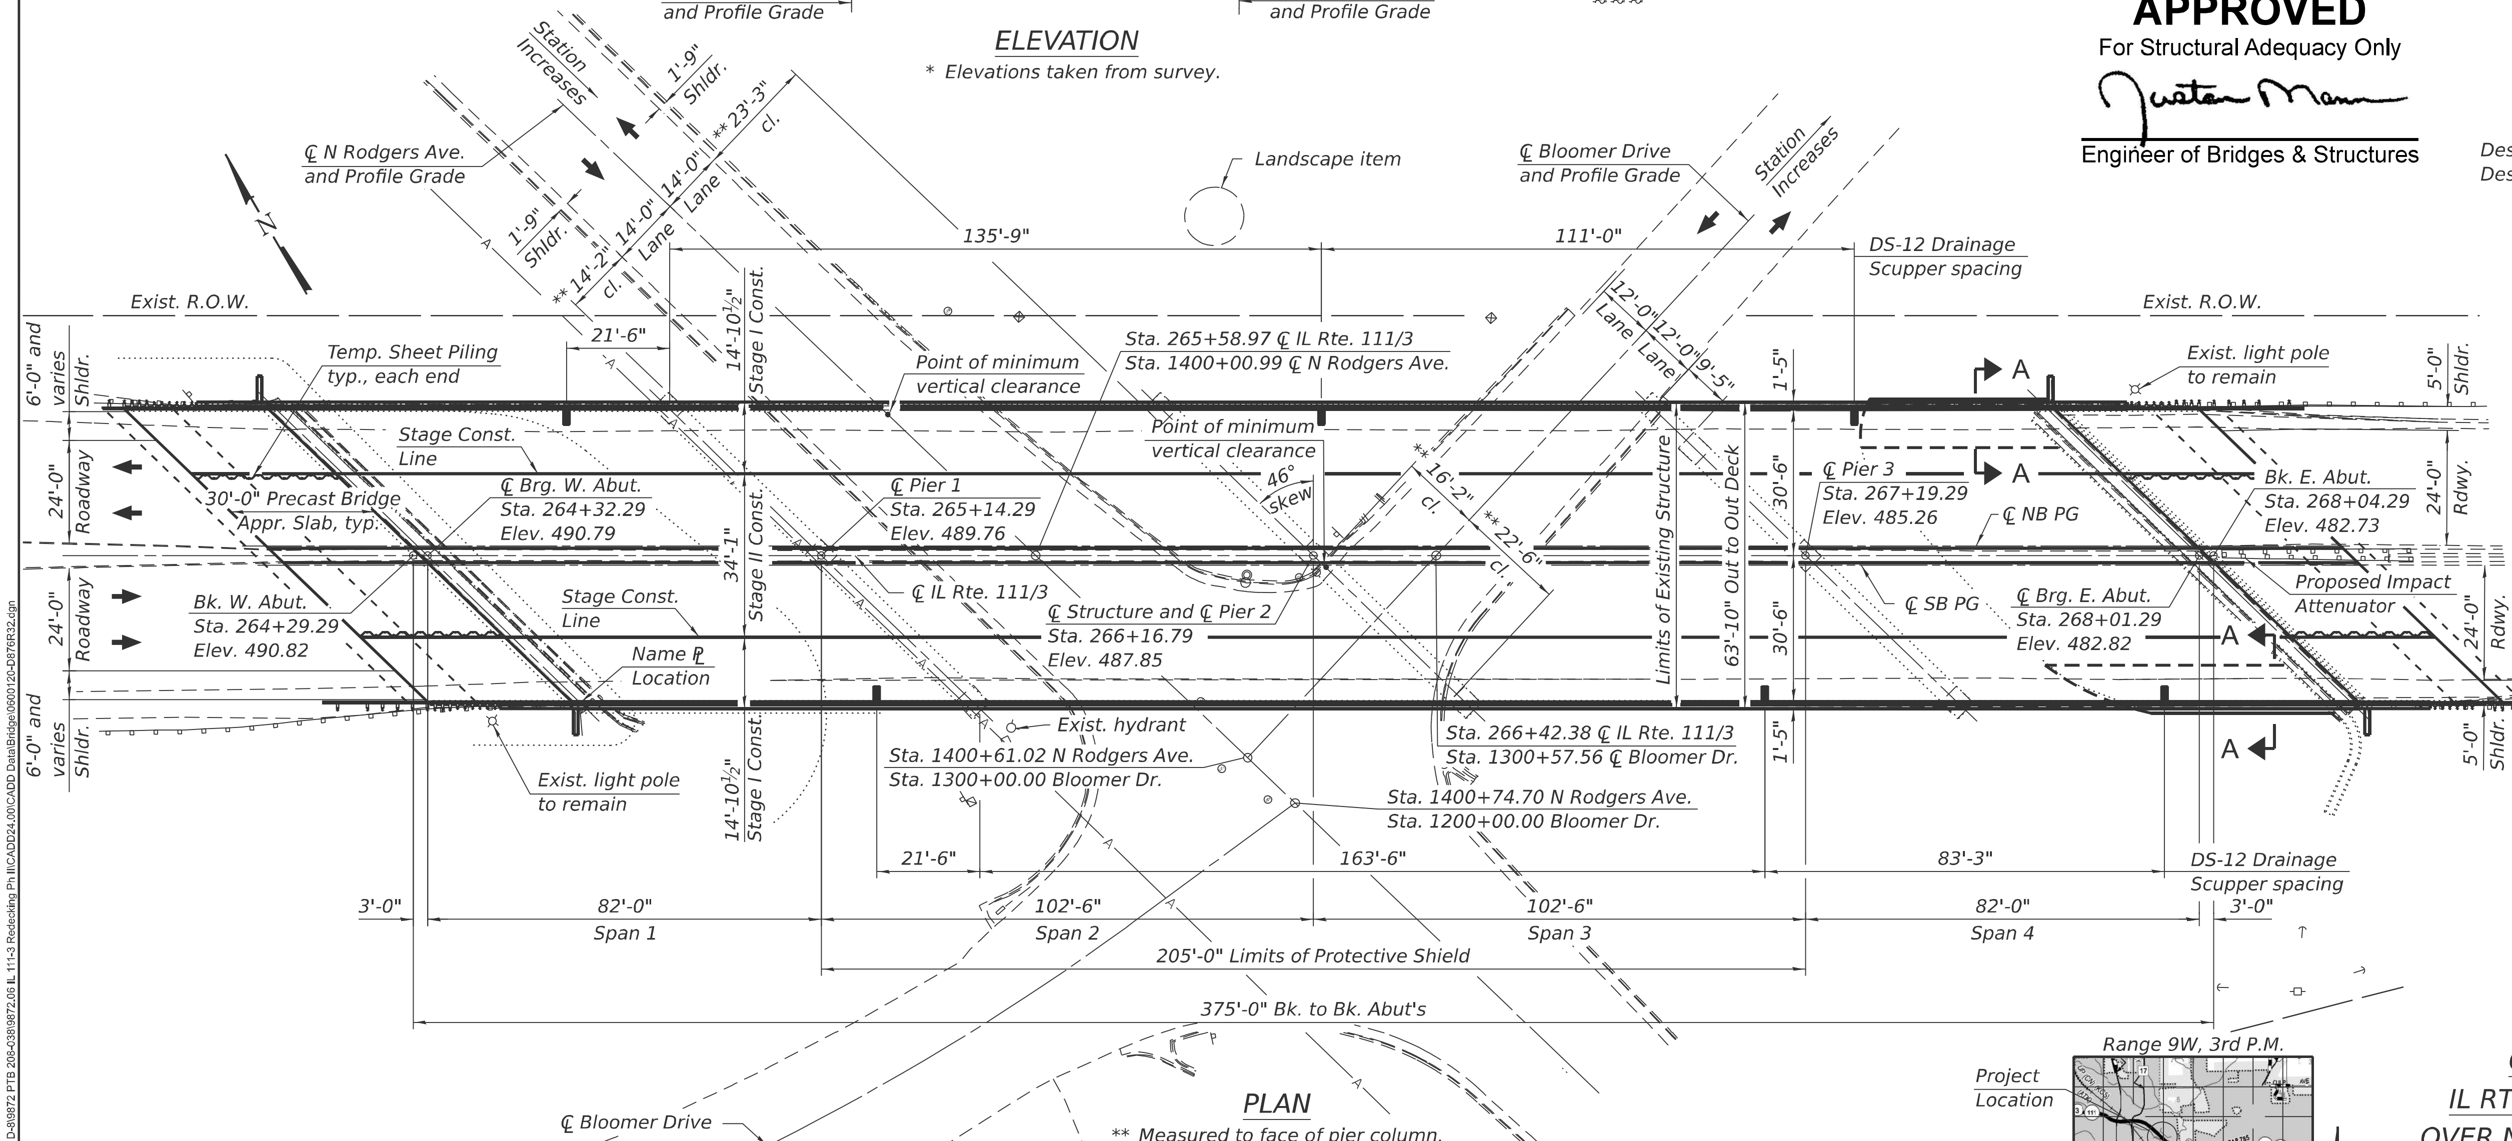
Existing Structure: SN 060-0120 was originally built in 1958 as F.A. Rte. 132, Section 1-HB and 1-HF. The superstructure consisted of a 7" thick reinforced concrete deck, raised concrete center median, concrete curbs, and metal railing on steel wide flange beams at 5'-10" spacing. The superstructure is supported by pile bent abutments on steel piles and three-column reinforced concrete piers on individual column footings and steel piles. The structure has a 46° skew with back-to-back abutments of 375'-0" and out-to-out deck of 63'-9". Traffic to be maintained utilizing staged construction.

No Salvage



ELEVATION

* Elevations taken from survey.



PLAN

** Measured to face of pier column.

LOADING HS20-44

Allow 12#/sq. ft. for future wearing surface.

INDEX OF SHEETS

SCOPE OF WORK

1. Remove and replace existing concrete deck and approach slabs. Make new deck composite full length.
2. Repair structural steel, as needed.
3. Clean and paint all beam ends.
4. Convert existing abutments and wingwalls to semi-integral configuration.
5. Repair existing substructure units as needed.
6. Replace existing bearings at abutments and expansion piers.
7. Partial in-kind replacement of existing slope wall.

GENERAL NOTES

1. No field welding is permitted except as specified in the contract documents.
2. Fasteners shall be ASTM F 3125 Grade A325 Type 1, mechanically galvanized bolts in painted areas. Bolts 7/8 in. diameter, holes 15/16 in. diameter, unless otherwise noted.
3. Prior to pouring the new concrete deck, all heavy or loose rust, loose mill scale, and other loose detrimental foreign material shall be removed from the surfaces in contact with concrete (SSPC - SP3 standards). Tightly adhered paint may remain unless otherwise noted. Removal shall be accomplished by methods that will not damage the steel and the cost will be paid for according to Article 109.04 of the Standard Specifications.

   As directed by the Engineer, existing construction accessories welded to the top flange of beams and girders shall be removed. The weld areas shall be ground flush and inspected for cracks using magnetic particle testing (MT) or dye penetrant testing (PT) by qualified personnel approved by the Engineer. Any cracks that cannot be removed by grinding 1/4 in. deep shall be identified and reported to the Bureau of Bridges and Structures for further disposition. The cost of removing welded accessories, grinding and inspecting weld areas and grinding cracks will be paid for according to Article 109.04 of the Standard Specifications.
4. The Contractor shall test the existing welds by non-destructive methods within 2 ft. of the end of the existing cover plates for cracks after removal of the existing concrete deck. Dye penetrant (PT), magnetic particle (MT), or other approved testing method shall be performed by qualified personnel approved by the Engineer. If cracks are found, report them to the Bureau of Bridges and Structures for disposition. The cost of testing is included in Removal of Existing Concrete Deck. The cost of crack repair, if necessary, will be paid for according to Article 109.04 of the Standard Specifications.
5. Reinforcement bars designated (E) shall be epoxy coated.
6. The concrete for bridge decks finished according to Article 503.16(a) of the Standard Specifications shall be placed and compacted parallel to the skew in uniform increments along centerline of bridge. The machine used for finishing shall be set parallel to the skew for striking off and screeding the concrete.
7. Plan dimensions and details relative to the existing structure have been taken from existing plans and are subject to nominal construction variations. The Contactor shall field verify existing dimensions and details affecting new construction and make necessary approved adjustments prior to construction or ordering of materials. Such variations shall not be cause for additional compensation for a change in scope of the work, however, the Contractor will be paid for the quantity actually furnished at the unit price bid for the work.
8. The existing structural steel coating contains lead. The Contractor shall take appropriate precautions to deal with the presence of lead on this project.
9. The existing bearings contain lead plates. The Contractor shall take precautions to deal with the presence of lead on this project.
10. All new structural steel shall be shop painted with an inorganic zinc rich primer per AASHTO M 300, Type 1.
11. Except as noted, cleaning and field painting of structural steel shall be done under a separate painting contract.
12. Prior to pouring concrete abutment diaphragms, all existing steel end diaphragms and beam ends, measured along and on either side of the beam within 2 ft of the proposed concrete diaphragm limits, shall be cleaned per Power Tool Cleaning-Modified SSPC SP-3. Areas required to be cleaned per Power Tool Cleaning-Modified SSPC SP-3 shall be coated with one coat of an approved organic zinc-rich or epoxy-mastic primer. Cost included with Concrete Superstructure.
13. Existing structural steel that will be in contact with new structural steel shall be cleaned and painted prior to erection as required by the Special Provision "Cleaning and Painting Contact Surface Areas of Existing Steel Structures", and the Standard Specifications.
14. Diamond grinding shall occur over a width extending to within 2 feet of the parapets and the edge of the traffic lane next to the raised median. Diamond grinding shall be performed prior to pouring the raised median to avoid interference between the grinding equipment and raised median.

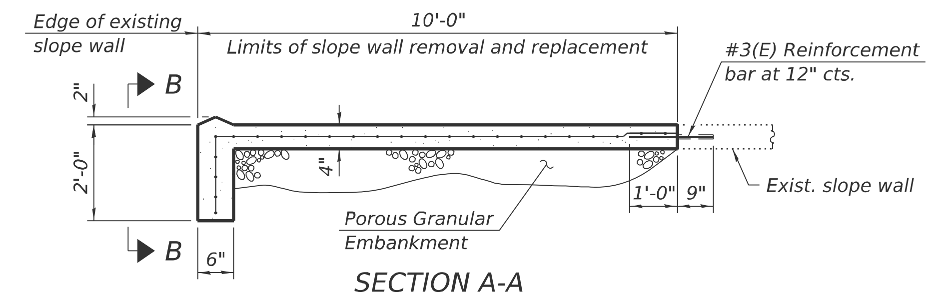
* Included in the cost of Pipe Underdrain for Structures.

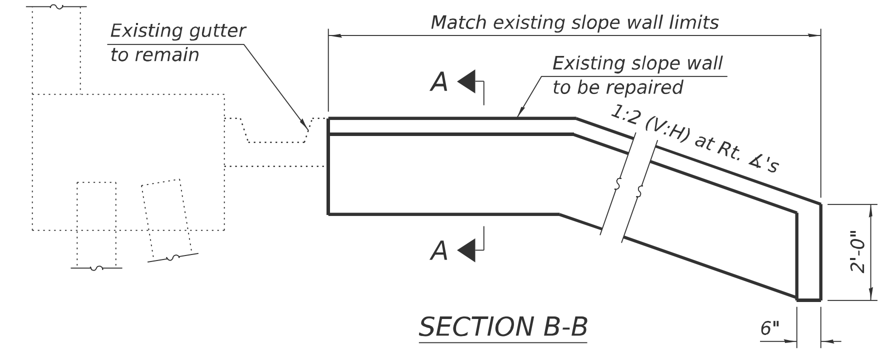
SECTION THRU SEMI-INTEGRAL ABUTMENT

(Horiz. dim. at Rt. ∠'s)

All drainage system components shall extend to 2'-0" from the end of each wingwall except an outlet pipe shall extend until intersecting with the side slopes. The pipes shall drain into concrete headwalls. (See Article 601.05 of the Standard Specifications and Highway Standard 601101).



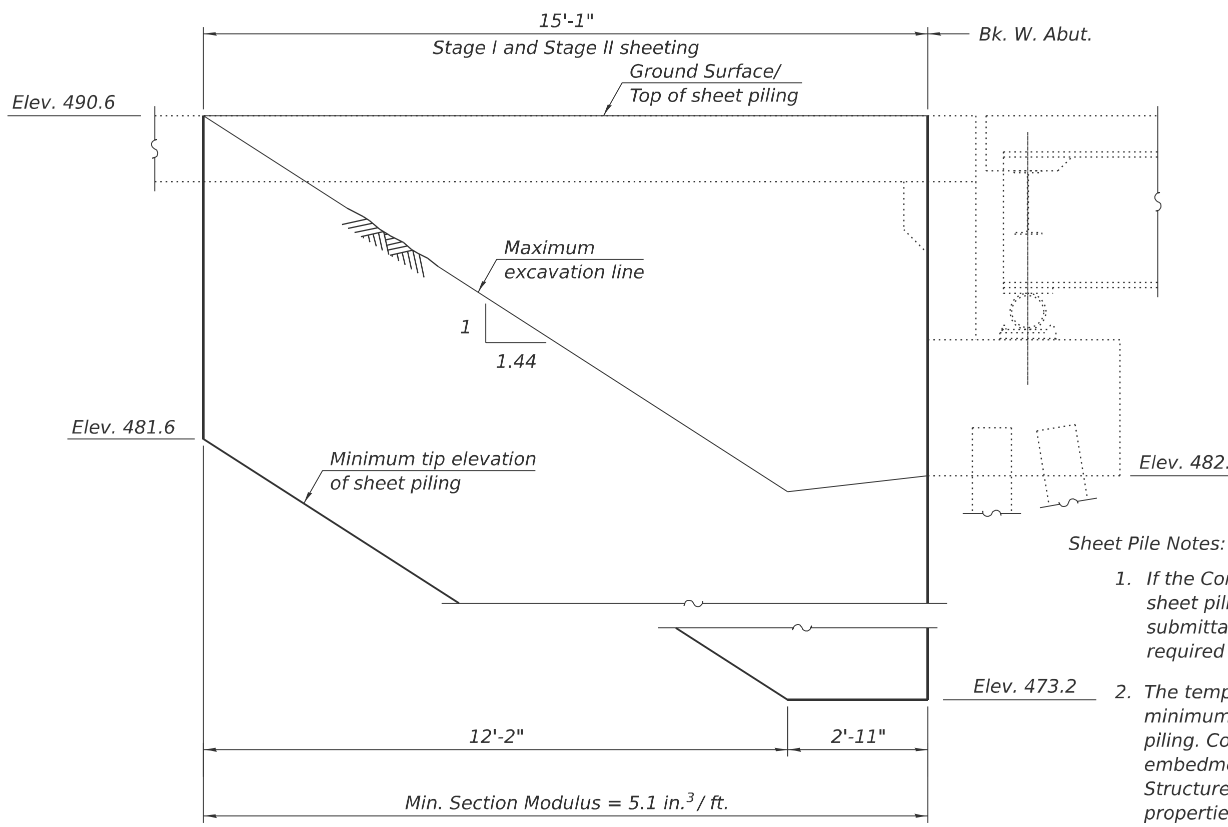
SECTION A-A



SECTION B-B

Notes:

1. Slope wall shall be reinforced with welded wire fabric, 6 in. x 6 in. – W4.0 x W4.0, weighing 58 lbs. per 100 sq. ft.
2. Porous Granular Embankment shall be used to backfill and shape the existing embankment as needed for the proposed slope wall. The quantity shown is an estimate. Actual quantity will depend on field conditions.
3. Drill and epoxy grout #3(E) reinforcement bars in 9" min. holes according to Art. 584 of the Standard Specifications. Cost of reinforcement bar and drilling and epoxy grouting included with Slope Wall 4 inch.



Sheet Pile Notes:

1. If the Contractor chooses to alter the temporary cantilevered sheet piling design requirements shown on the plans, a design submittal including plan details and calculations will be required for review and acceptance by the Engineer.
2. The temporary sheet piling design assumes soil properties with a minimum Qu = 1.0 tsf within the embedment depth of the sheet piling. Contractor shall field verify soil properties within the embedment depth of the sheet piling. The Bureau of Bridges and Structures shall be contacted for further disposition if the soil properties are less than the minimum design assumptions. Cost included with Temporary Sheet Piling.

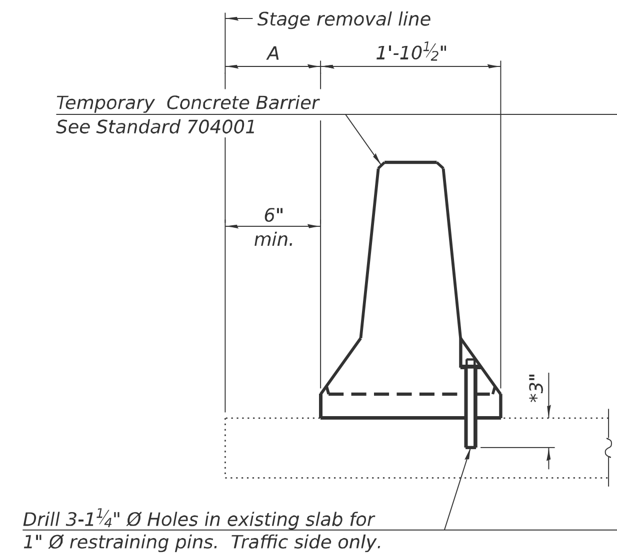
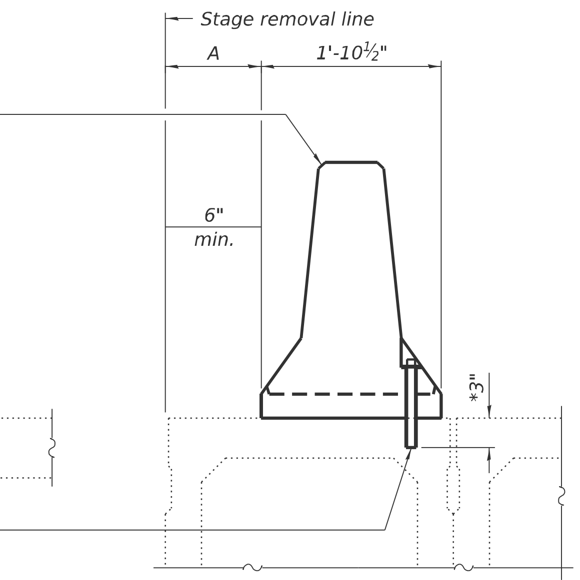
When "A" is 3'-1" or less, the temporary concrete barrier shall be restrained to the new slab according to Detail I, II or III. No restraint is required when "A" is greater than 3'-1".

NEW SLAB OR NEW DECK BEAM



Drill 3-1¼" Ø Holes in existing slab for 1" Ø restraining pins. Traffic side only. Cost of restraining pins are included with Temporary Concrete Barrier. No restraint is required when "A" is greater than 3'-1".

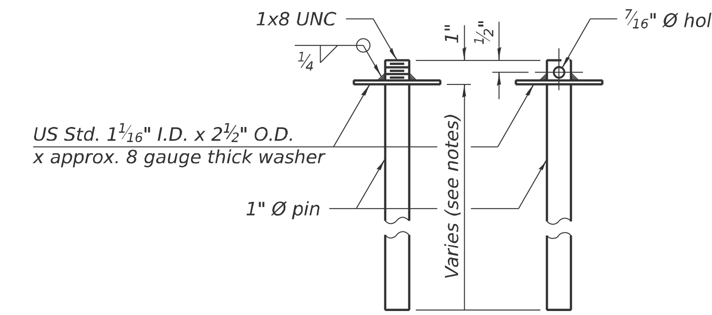
EXISTING SLAB



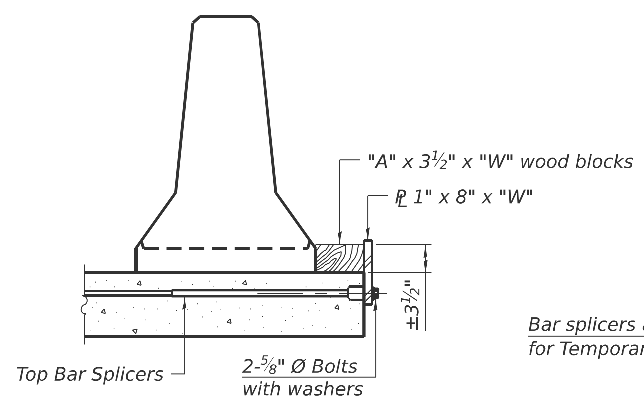
* When hot-mix asphalt wearing surface is present, embedment shall be 3" plus the wearing surface depth.

EXISTING DECK BEAM

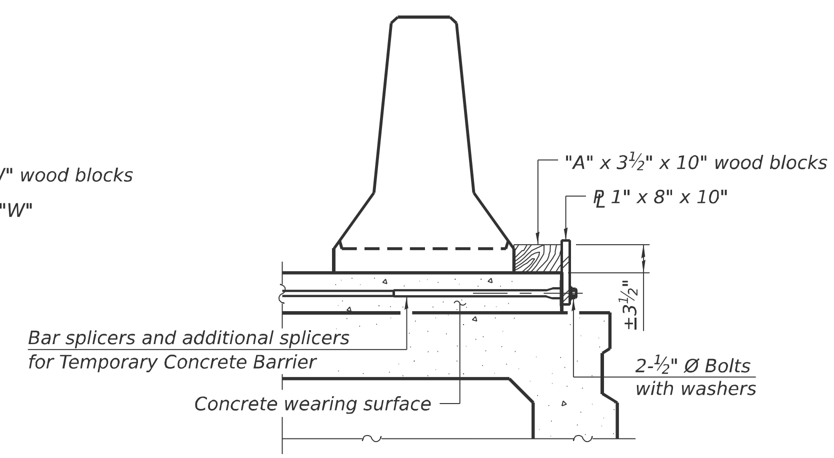
SECTIONS THRU SLAB OR DECK BEAM



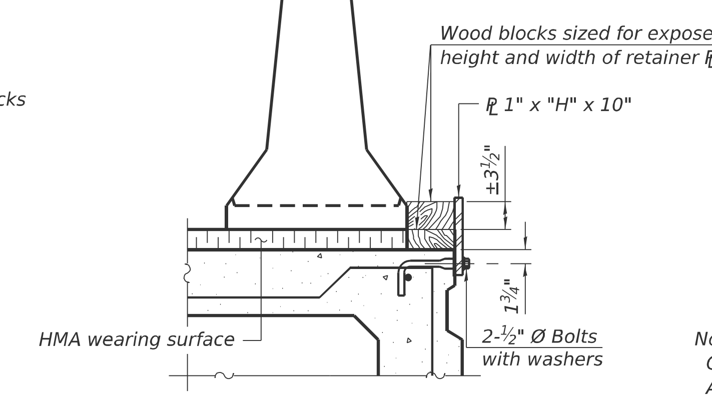
RESTRAINING PIN



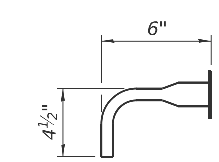
DETAIL I



DETAIL II



DETAIL III



BAR SPLICER FOR #4 BAR - DETAIL III

Notes:

Cost of retainer assembly is included with Temporary Concrete Barrier.

A retainer assembly shall be located at the approximate ℄ of each temporary concrete barrier.

The retainer plate shall not be removed until the concrete on the adjacent stage is ready to be poured. For Detail III applications the retainer plate shall not be removed until just prior to placing the adjacent beam.

When the 'A' dimension is less than 1½", the wood block shall be omitted and the barrier shall be placed in direct contact with the steel retainer plate. For deck beam applications the minimum required 'A' distance is 6" to accommodate the shear key clamping device.

Detail I - Installation for a new bridge deck or bridge slab.

Detail II - Installation for a new deck beam with an initial concrete wearing surface. Additional bar splicers shall be provided at 6'-0" centers and paired with the bar splicers of the concrete wearing surface reinforcement to accommodate the installation of the retainer assemblies. The cost of the additional bar splicers is included with the concrete wearing surface.

Detail III - Installation for a new deck beam with no initial wearing surface or with an initial hot-mix asphalt (HMA) wearing surface present. The deck beam directly beneath the temporary concrete barrier shall be fabricated with bar splicer inserts in the side of the beam, as detailed, to accommodate the installation of the retainer assemblies. A pair of bar splicers, 6" apart, shall be placed at 6'-0" centers along the length of the beam. The cost of the bar splicers is included with the deck beam.

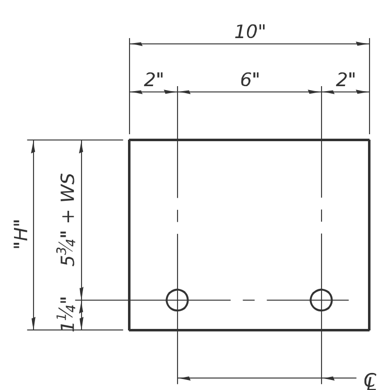
(Detail I and II)



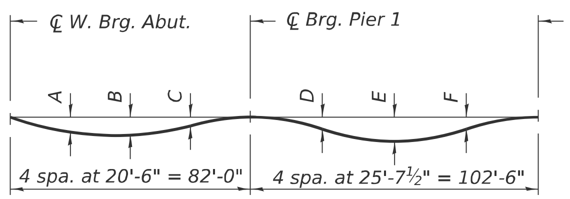
STEEL RETAINER PL 1" x "H" x 10"

(Detail III)

RAILING CRITERIA

NCHRP 350 Test Level	3
Railing Weight (plf)	440

R-27 5-15-2023

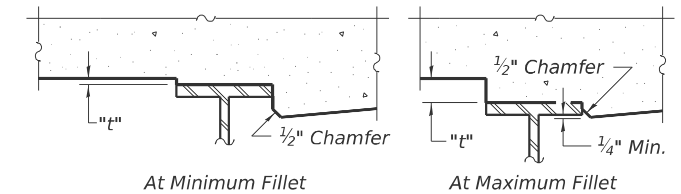


Beam No.	A	B	C	D	E	F
1 thru 5 8 thru 12	⅝"	¾"	⅜"	½"	⅞"	½"
6 and 7	⅜"	½"	¼"	¼"	½"	¼"

The above deflections are not to be used in the field if the engineer is working from the grade elevations adjusted for dead load deflections and grinding as on sheets 7 thru 12 of 39.

DEAD LOAD DEFLECTION DIAGRAM

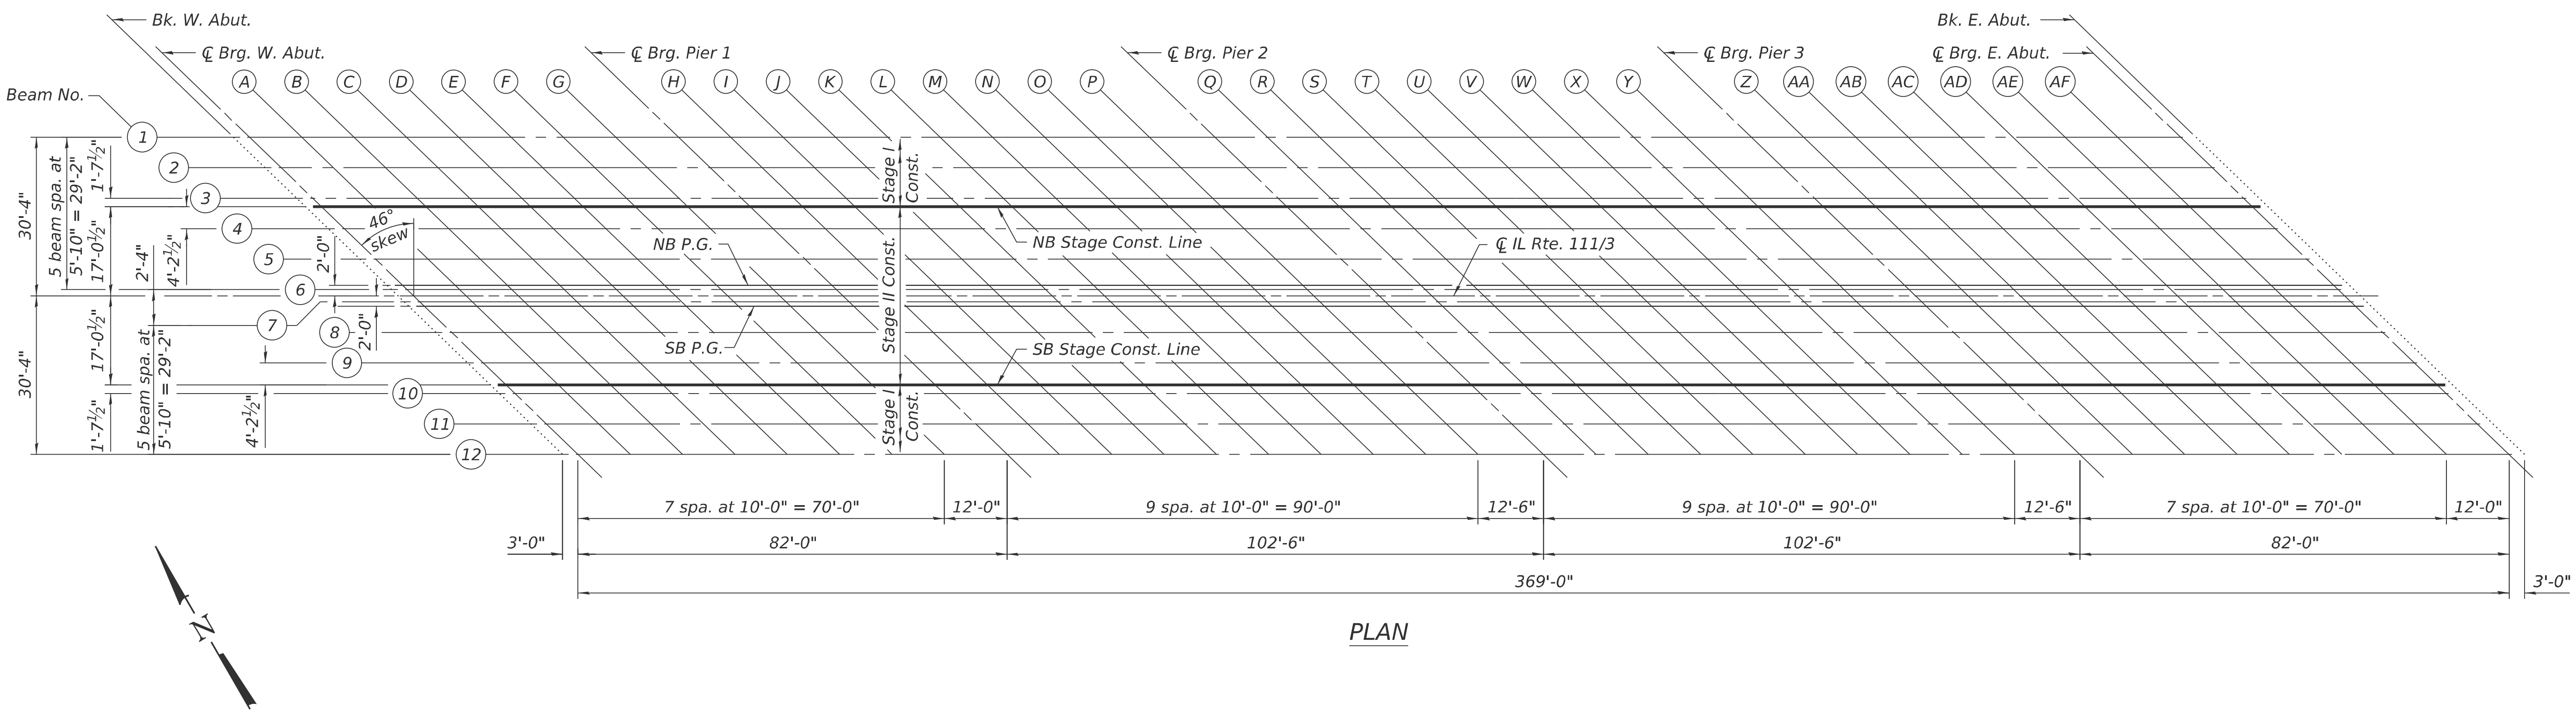
(Includes weight of concrete only.)



To determine "t": After all structural steel has been erected, elevations of the top flanges of the beams shall be taken at intervals shown below. These elevations subtracted from the "Theoretical Grade Elevations Adjusted for Dead Load Deflection and Grinding" shown below, minus the initial slab thickness prior to grinding, equals the fillet heights "t" above top flange of beams.

The slab is to be ground after curing to achieve smoothness, but the slab is not to be ground to elevations below the "Theoretical Grade Elevations" shown below. For grinding the deck, see Special Provisions.

FILLET HEIGHTS



PLAN

Note:

Offsets shown in the tables on Sheets 7 thru 12 of 39 are based on the ℄ IL Rte. 111/3.

(Sheet 1 of 7)

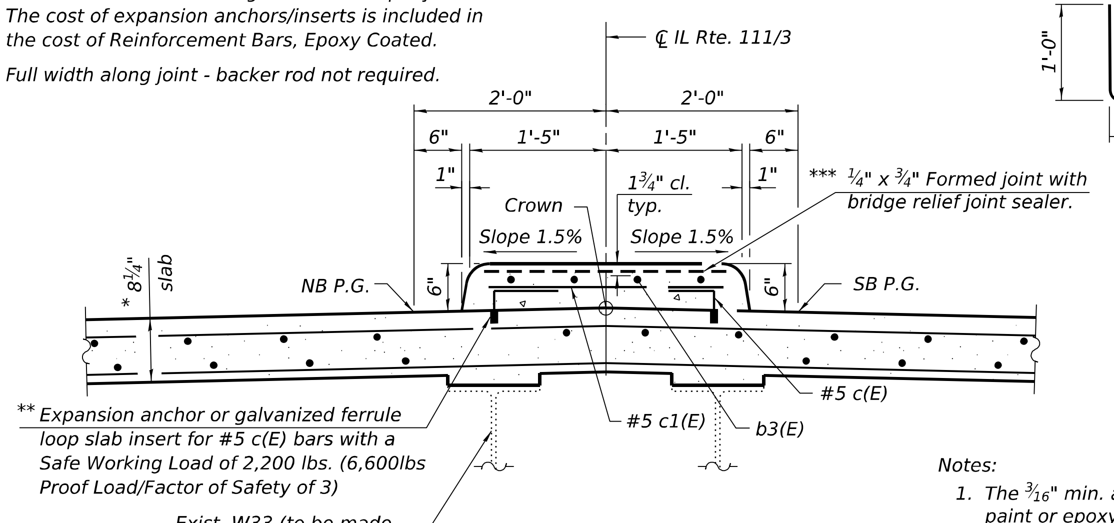
Reinforcement Bars, Epoxy Coated			Lbs.	193,530
Concrete Superstructure			Cu. Yds.	893.4

Bars indicated thus 1 x 2-#4 etc. indicates 1 line of bars with 2 lengths per line.

** Anchor or inserts shall be galvanized or epoxy coated. The cost of expansion anchors/inserts is included in the cost of Reinforcement Bars, Epoxy Coated.

*** Full width along joint - backer rod not required.



SECTION THRU MEDIAN

(Looking East)

Notes:

1. The 3/16" min. aluminum sheet shall be ASTM B 209 alloy 3003-H14 and coated with 5 mils of either bitumen paint or epoxy paint to minimize reaction with wet concrete. Cost included with Concrete Superstructure.
2. The polyurethane sealant shall be according to Article 1050.04 of the Std. Spec. and the color shall be gray.
3. Bar terminators, paid for separately. See Total Bill of Material.

PLAN AT ABUTMENT

(Showing bottom flange of beam. East abutment shown, west abutment similar.)
(See sheet 26 of 39 for additional threaded stud and anchor bolt details.)

* Prior to grinding

** Holes shall be cut in the existing diaphragm webs to facilitate placement of s(E) headed bars. Cost included with Reinforcement Bars, Epoxy Coated.

*** 2" PJF (per Article 1051.09 of the Standard Specifications) bonded to abutment and wing wall with suitable adhesive as recommended by supplier.

**** Fabric Reinforced Elastomeric Mat according to Section 1028 of the Standard Specifications and installed to applicable requirements of Article 520.09 of the Standard Specifications. Fabric mat shall be 24" wide and attached full width and vertically at edges of the abutment cap with a ⅜" x 5" steel plate and ½" ∅ studs with nuts and washers at 12" cts. Cost included with Concrete Superstructure.

Notes:

1. Reinforcement bars in diaphragm are included in the Bill of Material on sheet 17 of 39.
2. Concrete in diaphragm is included with Concrete Superstructure on sheet 17 of 39.
3. Concrete in abutment backwall is included with Concrete Structures in sheet 31 of 39.
4. The s(E), s1(E) and u(E) bars shall be placed parallel to the beams. Spacing for these bars shall be at right angles to the beams.
5. The approach slab seat shall have a constant slope determined from the control points shown.
6. Cost of fabric reinforced elastomeric mat, galvanized plate, stainless steel expansion bolts with nuts and washers and installation are included in the cost of Concrete Superstructure.

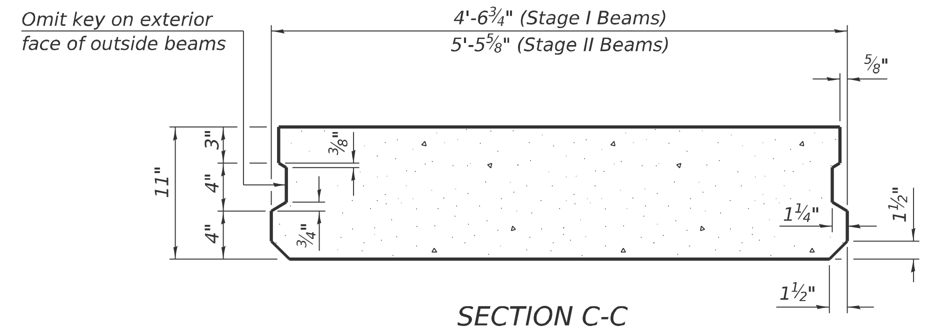
SECTION B-B



SECTION C-C

(Showing dimensions)

Notes:

The precast bridge approach slab shall be according to Section 504 of the Standard Specifications and shall be paid for at the contract unit price per square foot for Precast Bridge Approach Slab.

Cast-in-place substitution of Precast Bridge Approach Slab is not allowed.

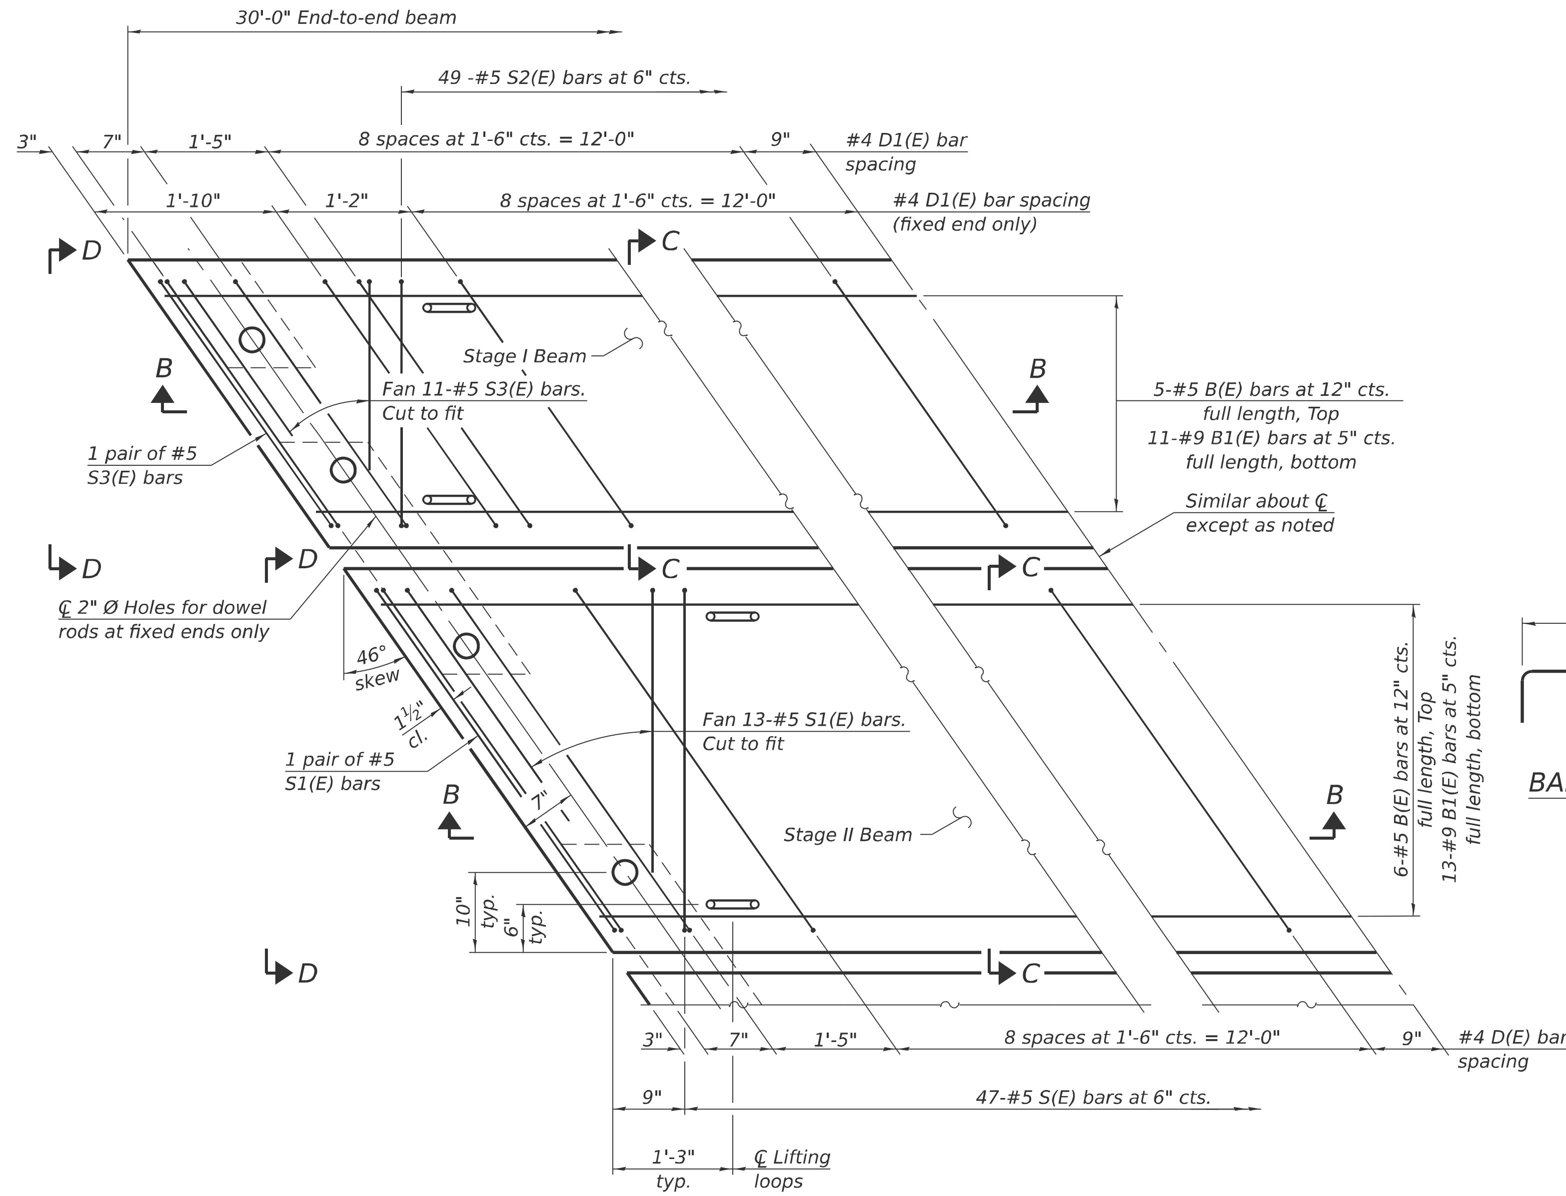
The top surface of precast bridge approach slabs shall be finished similar to precast prestressed deck beams with concrete wearing surface as specified in the IDOT "Manual for Fabrication of Precast Prestressed Concrete Products."

Two ⅛" fabric adjusting shims of the dimensions of the exterior bearing pad shall be provided for each bearing pad location. Cost included with Precast Bridge Approach Slab.

A minimum 2½" Ø lifting pins shall be used to engage the lifting loops during handling.

Compressive strength of precast concrete, f 'c shall be 6,000 psi.

Compressive strength of precast concrete during initial lifting, f 'ci shall be 5,000 psi.



PLAN VIEW

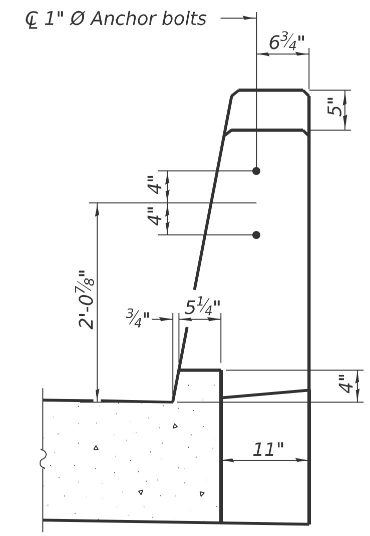
INSIDE ELEVATION OF PARAPET AND CURB



VIEW E-E

Notes:

The joint opening shall be adjusted for temperature per Article 520.04 of the Standard Specifications. However, since this detail is for jointless structures, the length of bridge used to calculate the adjustment shall be equal to half the total bridge length plus the length of the bridge approach slab.

After precast bridge approach slabs have been erected, holes shall be drilled into abutment and anchor dowels placed. Dowel holes shall be filled with non-shrink grout to top of precast slab and cured according to Article 1020.13(a)(3) or 1020.13(a)(5) of the Standard Specifications for a minimum of 24 hours before casting the shear keys and wearing surface.

Any concrete poured monolithically with the wearing surface, such as curbs, shall not be paid for separately, but will be included in the cost of Concrete Wearing Surface, 5¼".

Parapet concrete shall be paid for as Concrete Superstructure.

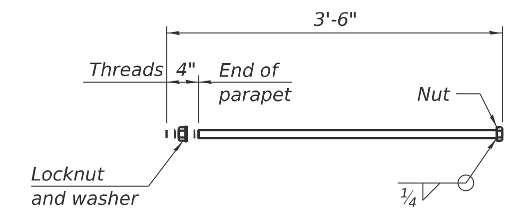
Approach footing concrete shall be paid for as Concrete Structures.

The approach footing maximum applied service bearing pressure (Qmax) = 2.0 ksf.

Cost of excavation for approach footing included with Concrete Structures.

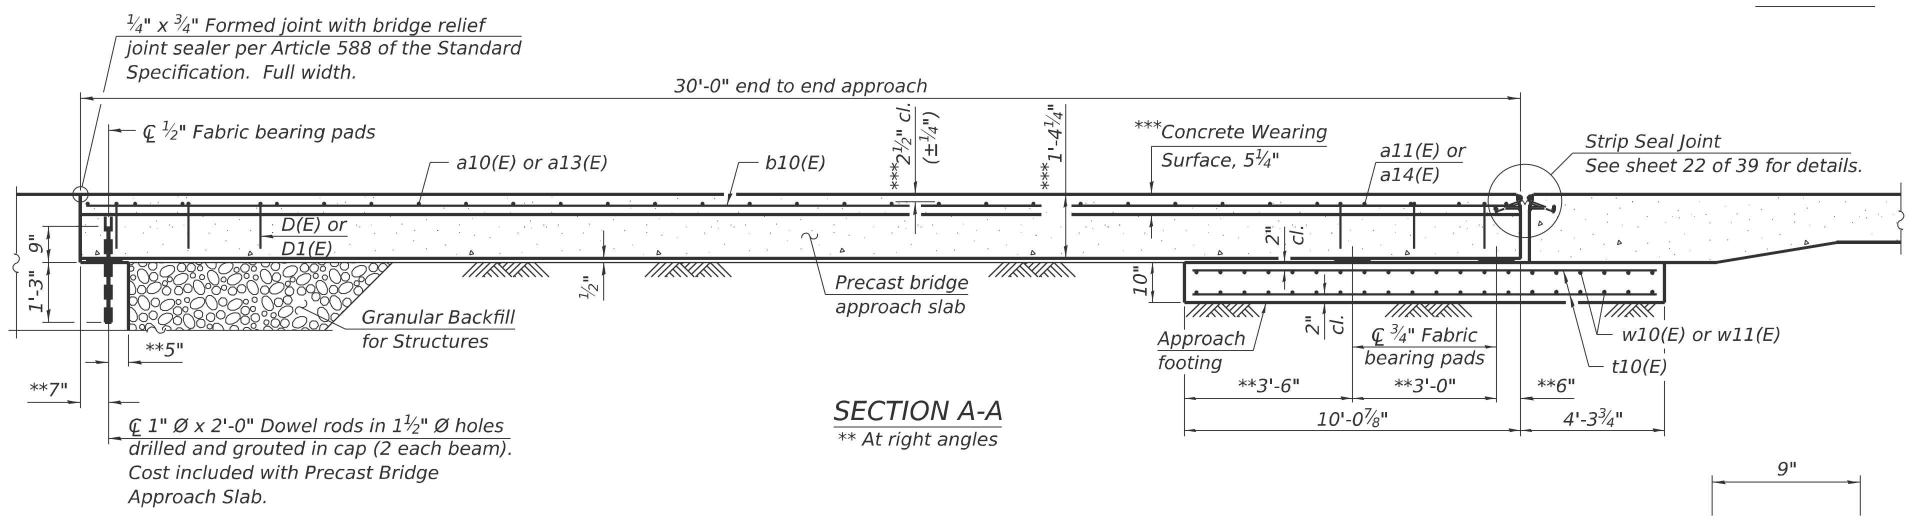
For Granular Backfill for Structures and drainage treatment details, see sheet 3 of 39.

Cost of cellular polystyrene is included with Concrete Superstructure.



1" Ø ANCHOR BOLT

(Anchor bolt assemblies shall be galvanized according to Article 1006.09 of the Standard Specifications. Cost of anchor bolt assemblies included with Concrete Superstructure)



SECTION A-A

** At right angles

*** Prior to grinding

**** Anchor or inserts may be galvanized or epoxy coated. The cost of expansion anchors/inserts is included in the cost of Reinforcement Bars, Epoxy Coated.

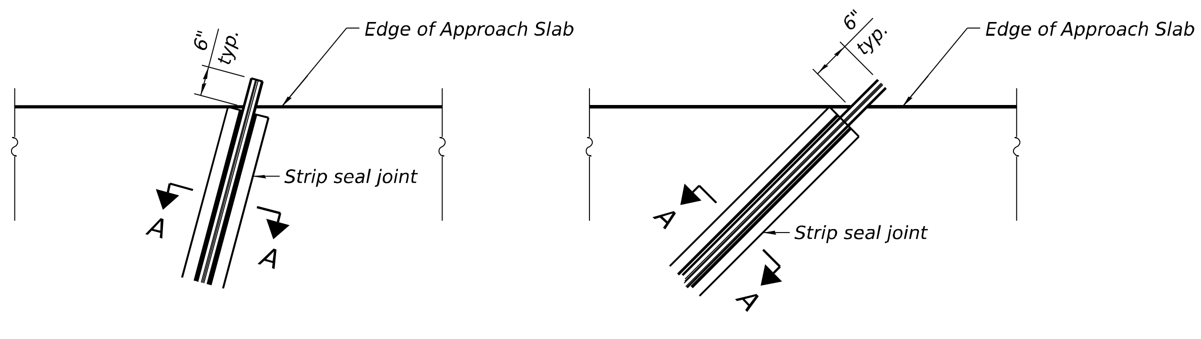
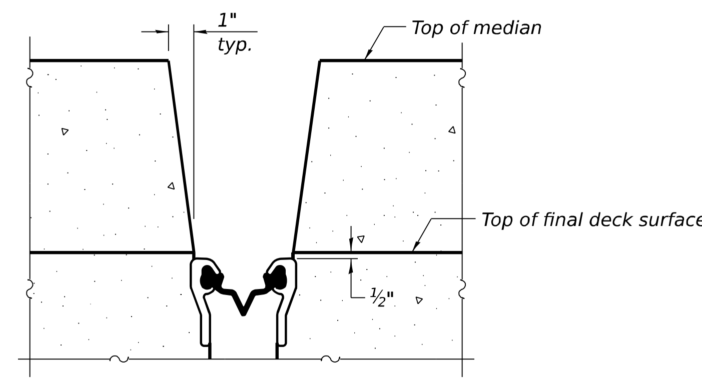
(Sheet 3 of 3)

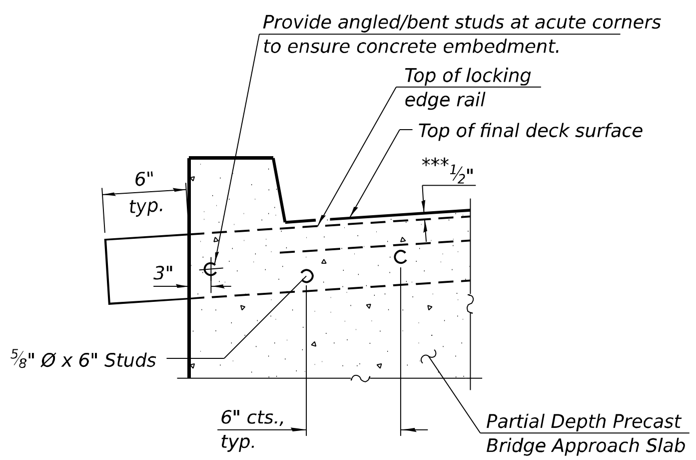


PLAN AT EDGE OF APPROACH SLAB



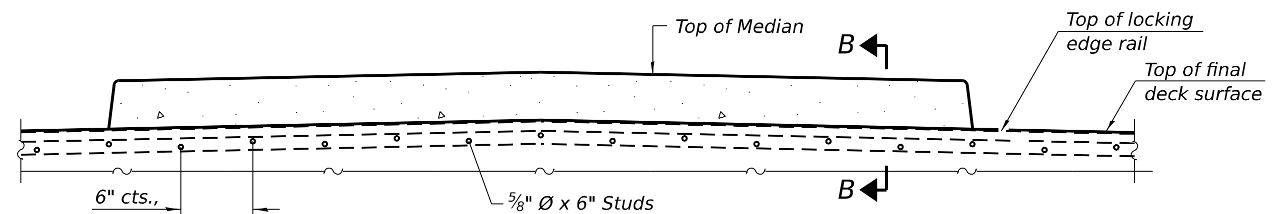
SECTION B-B
(at Rt. ∠'s)

Notes:
The strip seal shall be made continuous and shall have a minimum thickness of ¼". The configuration of the strip seal shall match the configuration of the locking edge rails. Open or "webbed" strip seal gland configurations are not permitted. The gland shall be sized for a maximum rated movement of 4 inches.
The locking edge rails depicted are configured for typical applications and are conceptual only. The actual configuration of the locking edge rails and matching strip seal may vary from manufacturer to manufacturer provided they fit the application and meet the minimum anchorage shown. Flanged edge rails, however, will not be allowed. Locking edge rails may exceed the 4½" maximum depth provided the anchorage system is revised according to the manufacturer's recommendation.
The manufacturer's recommended installation methods shall be followed.
All steel components shall be galvanized after fabrication according to Article 520.03 of the Standard Specifications.
The Maximum space between locking edge rail segments shall be $^{3}/_{16}$" and sealed with a suitable sealant; however, any rail joint within 10' measured perpendicular to the face of the curb or parapet shall be welded as shown in the locking edge rail splice detail.
Cost of anchorage studs included with Preformed Joint Strip Seal.
The concrete opening below the strip seal will vary based on the locking edge rail chosen by the Contractor. Deck and parapet lengths shown elsewhere in the plans are dimensioned to the concrete opening, not the joint opening, and are based on the rolled locking edge rail. If the Contractor elects to use a different locking edge rail, dimensional adjustments may be required. One exception to this would be the strip seal joint at the end of the precast bridge approach slab. For these cases the pavement connector length shall be adjusted, not the length of the bridge approach slab.



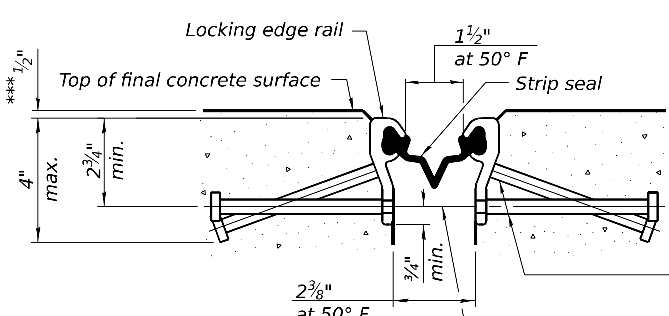
ELEVATION AT CURB

*** Prior to grinding.

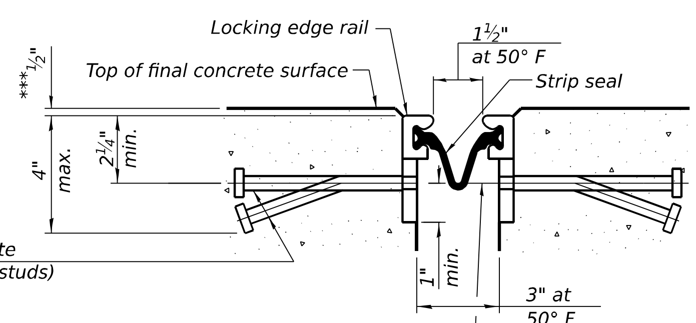


SECTION AT MEDIAN

For skews > 30°, chamfer acute corners 2". See detail on sheet 19 of 39.



SHOWING ROLLED RAIL JOINT



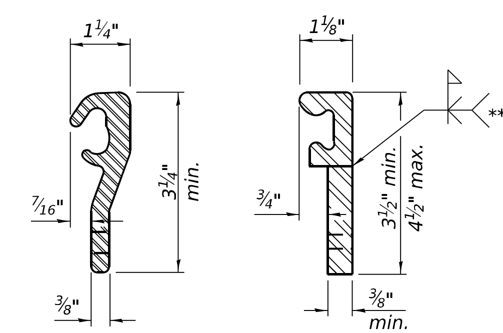
SHOWING WELDED RAIL JOINT

* ⅝" Ø x 6" studs @ 6" cts. (alternate angled/bent studs with horizontal studs)

⅜" Ø threaded rods in $^{7}/_{16}$" Ø holes at 4'-0"± cts. for holding the proper joint opening based on the temperature during the deck pour. Place to miss studs. All rods shall be burned, or sawed off flush with the plates within 90 minutes after concrete is set.

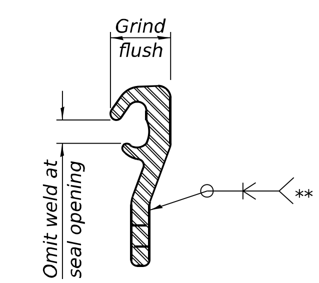
SECTION A-A

* Granular or solid flux filled headed studs conforming to Article 1006.32 of the Std. Specs., automatically end welded.



LOCKING EDGE RAILS

** Back gouge not required if complete joint penetration is verified by mock-up.



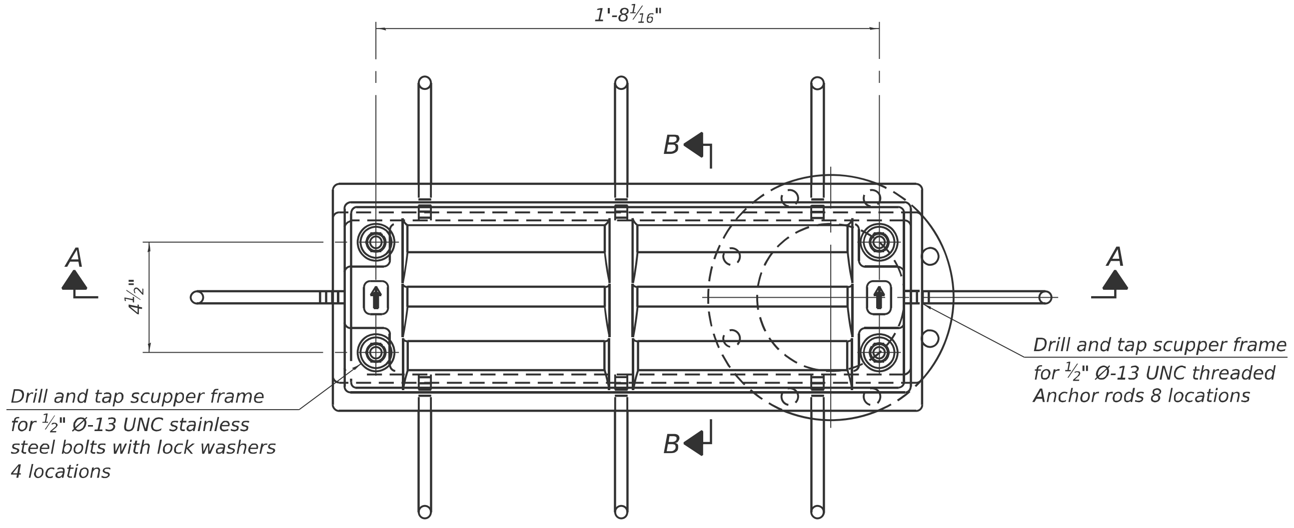
LOCKING EDGE RAIL SPLICE

The inside of the locking edge rail groove shall be free of weld residue. Rolled rail shown, welded rail similar.

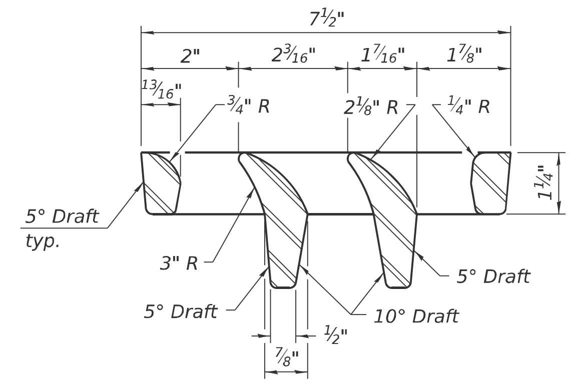
BILL OF MATERIAL

Item	Unit	Total
Preformed Joint Strip Seal	Foot	182

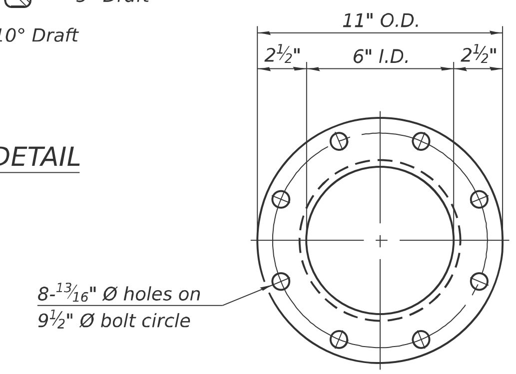
EJ-SS 10-3-2025 (Modified)



PLAN



VANE GRATE DETAIL



Notes:

All cast iron parts shall be gray iron conforming to the requirements of AASHTO M105, Class 35B and AASHTO M306.

Bolts, anchor rods, nuts and washers shall be according to ASTM A307 and shall be galvanized according to AASHTO M232. As an alternate stainless steel may be used.

Stainless steel hardware shall be according to Article 1006.29(d) of the Standard Specifications.

Structural steel weldments of equal sections and of the same configuration may be substituted for the cast iron scupper frames and downspouts; however, the scupper grates shall remain cast iron. Fillet or full penetration welds shall be used for the weldments. Details shall be submitted to the Engineer for approval.

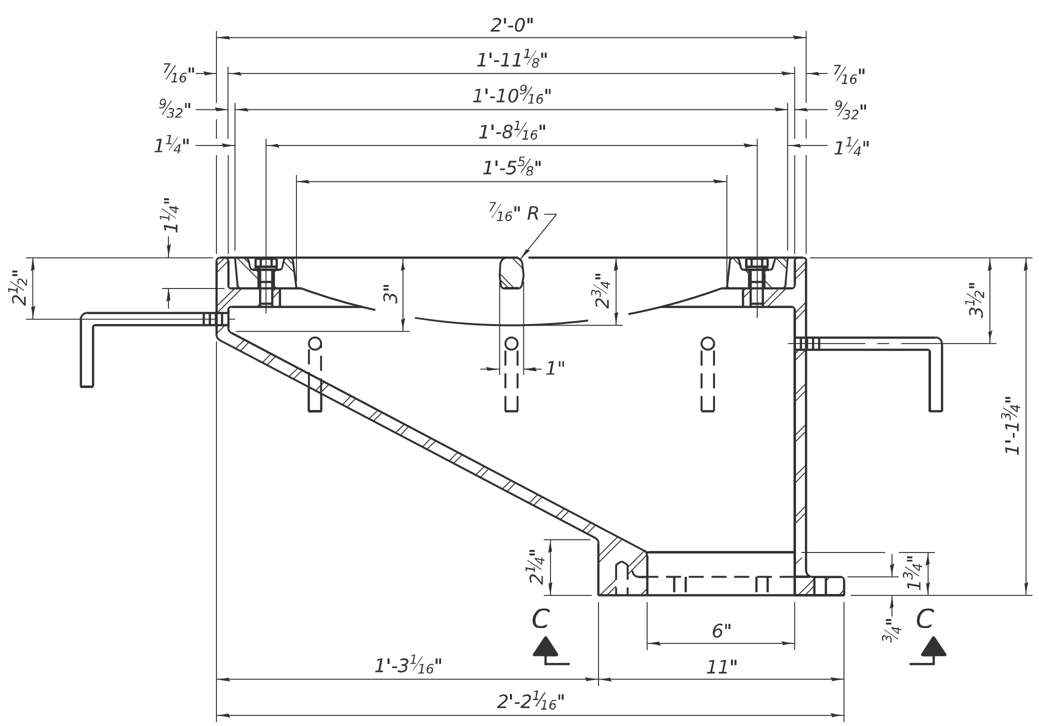
Structural steel scupper frames and downspouts, when utilized, shall be galvanized according to AASHTO M111.

As an alternate, fiberglass may be used for downspouts according to ASTM D2996 with a short-time rupture strength hoop tensile stress of 30,000 psi min. in lieu of the cast iron or structural steel.

Exterior surfaces of downspouts and exterior exposed surfaces of the scupper frame below deck shall be treated as specified on sheet 2 of 39.

The Contractor shall take appropriate measures to assure that Protective Coat is not applied to the scupper.

Cost of the grate, frame, downspout, anchor rods, nuts and washers including complete installation of the scupper shall be paid for at the contract unit price for Drainage Scuppers, DS-12.



SECTION A-A

See sheet 17 of 39 for scupper location relative to parapet.

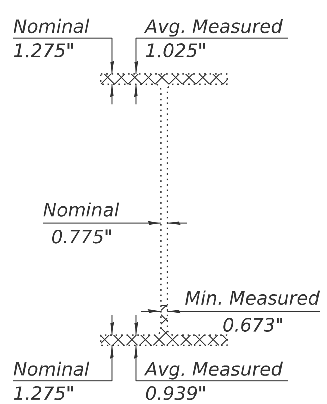
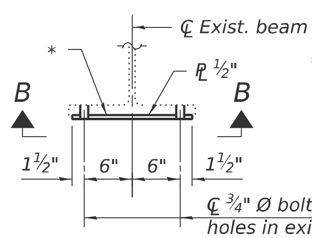
51' long beam segments estimated to require fillet reinforcement

FRAMING PLAN



SECTION A-A

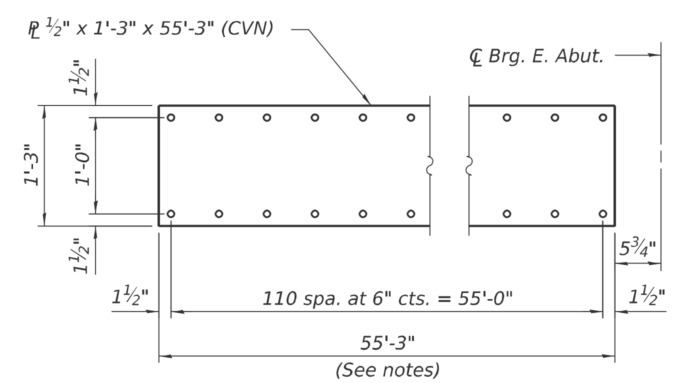
(For information only. Cross hatched area indicates estimated condition of beams 6, 11, and 12. See notes.)



SECTION A-A

(Showing the bottom flange repair of beams 6, 11 and 12.)

* Cleaning and Painting of contact surface areas shall meet the requirements for Primary Connections as specified in the Special Provision "Cleaning and Painting Contact Surface Areas of Steel Structures".



VIEW B-B

(Existing beam omitted for clarity.)

Note A: Proposed bolts shall be in a finger tight condition with faying surfaces in close contact.

Note B: Loosen proposed bolts approximately ¼".

Note C: Fully torque all proposed bolts of the diaphragm connections in accordance with Article 505.04(f) of the Standard Specifications.

Notes:

1. Proposed steel repairs to the bottom flanges of beams 6, 11, and 12 are based upon deterioration observed near the East Abutment. The Existing Protective Shield System limits access and obstructs inspection of the beam conditions along the beam line. The proposed bottom flange repairs have been detailed to extend from near the East Abutment bearing to near Splice 6.
2. Upon removal of the Existing Protective Shield System, the Contractor shall provide the Engineer with access to inspect the condition and measure section loss of these beams. All costs associated with providing inspection access, including any required access equipment, shall be included in the cost of Removal of Existing Protective Shield. The Bureau of Bridges and Structures shall be contacted for further disposition if the measured section loss exceeds the deterioration shown in Section A-A or extends beyond the repair limits depicted in Section B-B. The Engineer may also submit a request to the Bureau of Bridges and Structures to reduce the repair length if existing conditions and section loss measurements indicate that a shorter repair is appropriate. The inspection shall occur prior to ordering repair plate.
3. Proposed steel repairs to beams 6, 11, and 12 shall be performed after the existing concrete deck has been removed and prior to constructing the proposed concrete deck.
4. Load carrying components designated "CVN" shall conform to the Charpy-V-Notch Impact Energy Requirements, Zone 2.

Prior to beginning deck removal, replace existing rivets with new ¾" Ø bolts. Cost included with Structural Steel Repair.

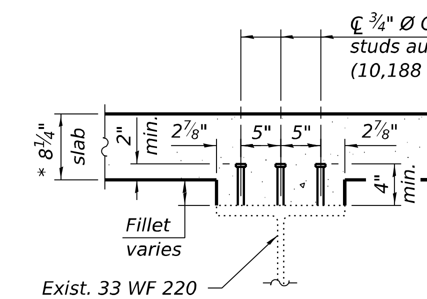
$M_{D_L} + M_s D_L + \frac{5}{3} (M_{L_L} + M_I)$

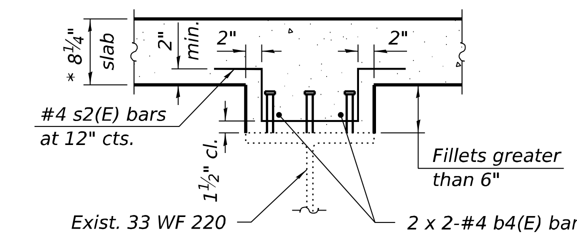
f_s (Total): Sum of stresses as computed from the moments below on non-compact section (ksi).
$1.3 [M_{D_L} + M_s D_L + \frac{5}{3} (M_{L_L} + M_I)]$

VR: Maximum L_L + impact shear range within the composite portion of the span for stud shear connector design (kips).



SECTION C-C

* Prior to grinding.



SECTION C-C

(Showing fillet reinforcement. See notes.)

MINIMUM BAR LAP

#4 bar = 2'-2"

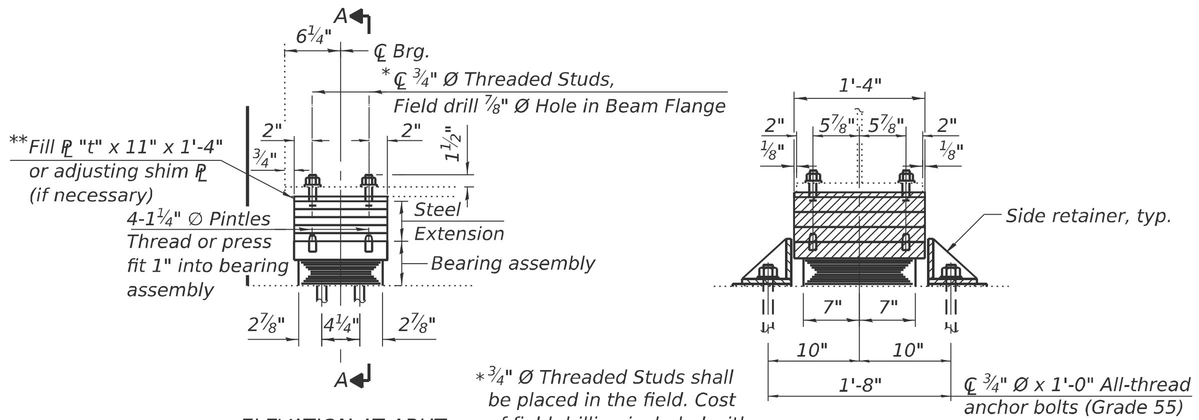
Notes:

1. Fillet reinforcement is detailed in locations where the fillet height is estimated to exceed 6 inches. The Contractor shall determine the actual fillet heights and verify the required limits of fillet reinforcement prior to ordering the reinforcement.
2. See Sheet 17 of 39 for fillet reinforcement details and quantities.

BILL OF MATERIAL

Item	Unit	Total
Structural Steel Repair	Pound	5,400
Stud Shear Connectors	Each	10,188

(Sheet 2 of 2)

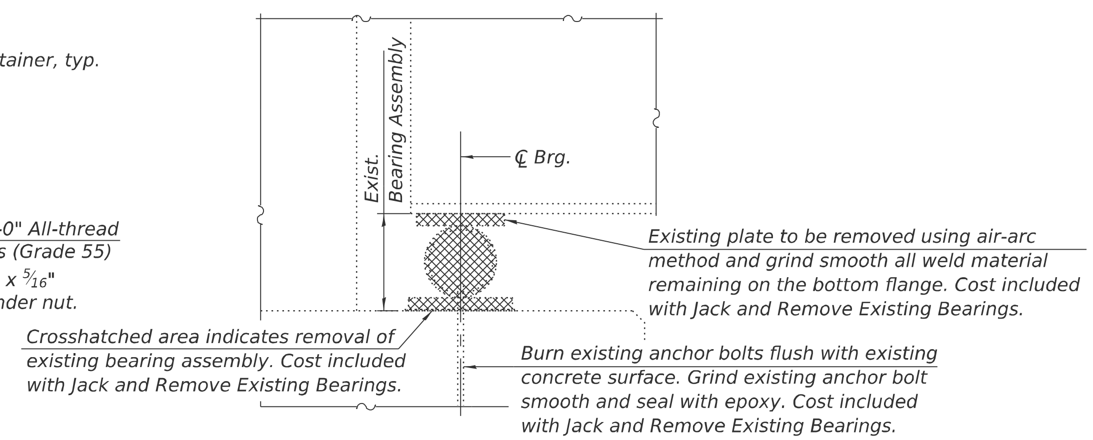


ELEVATION AT ABUT.

*¾" Ø Threaded Studs shall be placed in the field. Cost of field drilling included with Furnishing and Erecting Structural Steel.

SECTION A-A

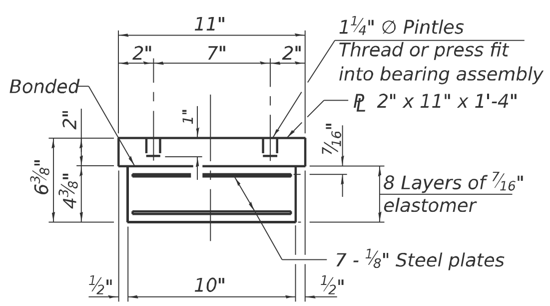
TYPE I ELASTOMERIC EXP. BRG.



EXISTING BEARING ASSEMBLY REMOVAL DETAIL

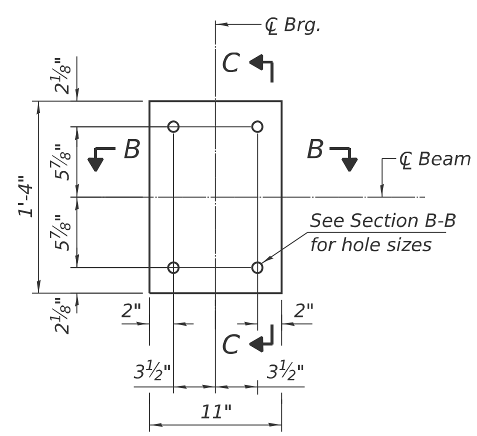
Notes:

1. Jacking and removing existing bearings shall be done in stages while the existing bridge deck is removed.
2. The Maximum Dead Load Reaction with deck removed (per bearing) at each abutment is 8.5 kips. Minimum jack capacity is 13 kips.
3. Prior to ordering any material, the Contractor shall verify in the field all bearing height and shim thickness dimensions.
4. Drilled and set anchor bolts shall be installed according to Article 521.06 of the Standard Specifications.
5. Side retainers and other steel plates required for the elastomeric bearing assembly, except the steel bearing extension, fill plates, and threaded studs in bottom flange shall be included in the cost of Elastomeric Bearing Assembly, Type I. Steel bearing extensions, fill plates, and threaded studs in bottom flange are included in the quantity for Furnishing and Erecting Structural Steel.
6. Two ⅛" adjusting shims shall be provided for each bearing in addition to all other plates or shims and placed as shown on bearing details. Cost included with Furnishing and Erecting Structural Steel.
7. The number of stacked plates shown for the steel extension is conceptual for illustration only.
8. Diaphragm removal and reinstallation may be required to facilitate drilling holes. Existing fasteners shall be replaced with new fasteners of the same diameter. Cost included with Elastomeric Bearing Assembly, Type I.

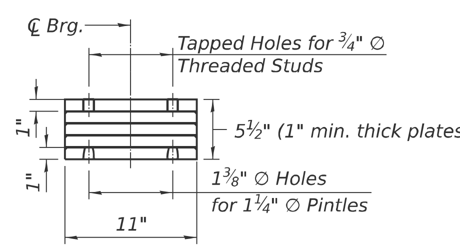


BEARING ASSEMBLY

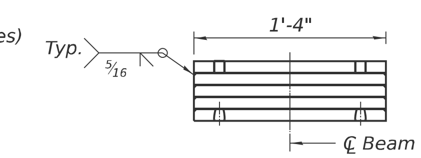
Note:
Shim plates shall not be placed under bearing assembly.



PLAN

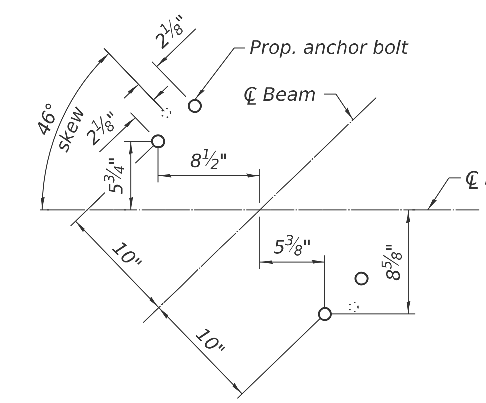


SECTION B-B



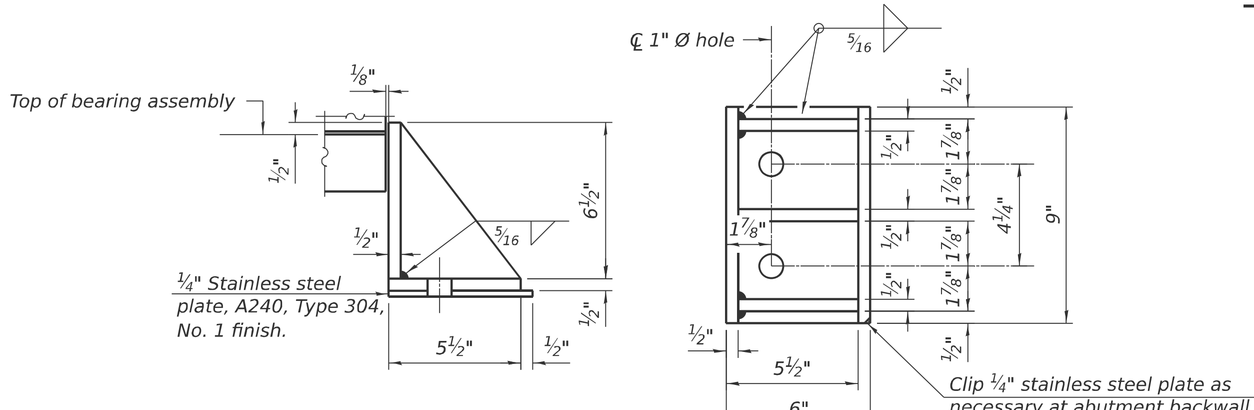
SECTION C-C

STEEL BEARING EXTENSION



ANCHOR BOLT LAYOUT

(Shown for information only. It is recommended that the Contractor set the side retainers in place and use the holes in the side retainers to locate the anchor bolts on the abutment.)



SIDE RETAINER

Equivalent rolled angle with stiffeners will be allowed in lieu of welded plates.

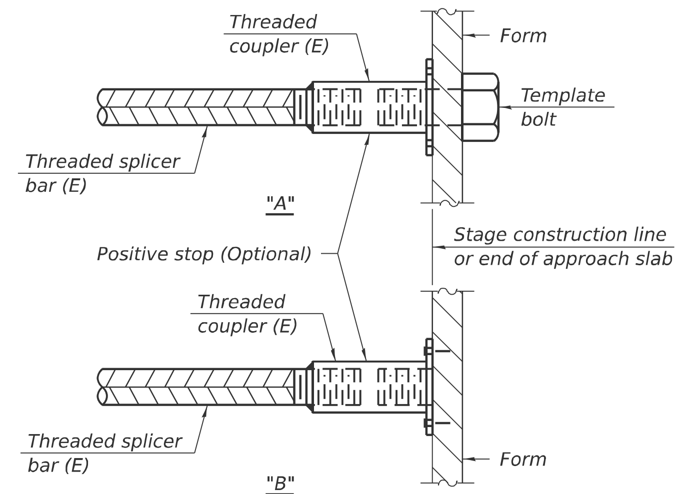
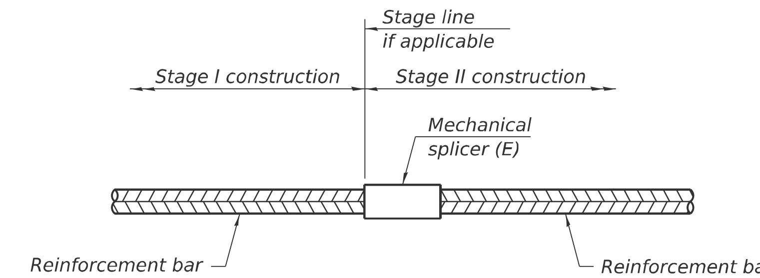
STANDARD BAR SPLICER ASSEMBLY PLAN

Only bar splicer assemblies as presented on the approved QPL list may be used.



INSTALLATION AND SETTING METHODS

"A" : Set bar splicer assembly by means of a template bolt.
"B" : Set bar splicer assembly by nailing to wood forms or cementing to steel forms.
(E) : Indicates epoxy coating.



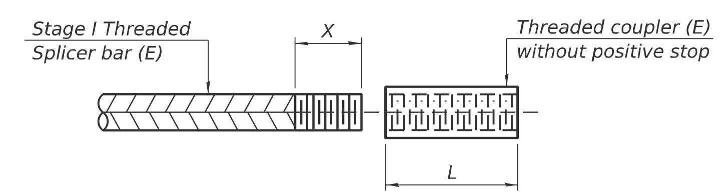
STANDARD MECHANICAL SPLICER

Location	Bar size	No. assemblies required

Threaded splicer bar length = min. lap length + 1½" + thread length

* Epoxy not required on Bar Splicer Assembly components used in conjunction with black bars.

Location	Bar size	No. assemblies required	Minimum lap length
Precast Bridge Approach Slabs	#4	64	1'-7"
Precast Bridge Approach Slabs	#5	56	2'-1"
Precast Bridge Approach Slab Footings	#5	160	2'-1"
Deck	#5	2,162	3'-10"
Diaphragms	#4	8	2'-2"
Diaphragms	#6	20	3'-0"
Abutments	#5	8	3'-10"



THREADING OF ASSEMBLIES

The threaded length "X" shall be no more than L/2. The bar should be tightened until 0-1 thread(s) is/are exposed.

Notes:

1. Splicer bars shall be deformed with threaded ends and have a minimum 60 ksi yield strength.
2. All reinforcement shall be lapped and tied to the splicer bars.
3. Bar splicer assemblies shall be epoxy coated according to the requirements for reinforcement bars. See Section 508 of the Standard Specifications.
4. See approved list of bar splicer assemblies and mechanical splicers for alternatives.
