Details shall be submitted to the Engineer for approval. Structural steel weldments shall not be substituted for the cast iron scupper grate. Structural steel frames and downspouts shall be galvanized according to AASHTO M111.

The Contractor shall take appropriate measures to assure that Protective Coat is not applied to the scupper.

Cost of the Grate, Frame, Downspout, Anchor Studs, Bolts, Washers and Nuts including complete installation of the scupper shall be paid for at the contract unit price each for Drainage Scupper, DS-33.

Alternate fiberglass downspout conforming to ASTM D 2996 with a short-time rupture strength hoop tensile stress of 30,000 psi min. may be used in lieu of the cast iron or steel equivalent.

4. Temporary bracing T1 and T2 shall not be removed until Stage 1 construction is complete.
5. Cost of furnishing, erecting, removal and disposal of temporary bracing shall be included with Furnishing and Erecting Structural Steel. Estimated weight of 14,810 pounds for temporary bracing is included in the total structural steel weight shown on Sheet S-2.
6. For each stage, when cantilever forming brackets are used for deck forms, the work shall be done according to Article 503.06(b) of the Standard Specifications except as modified below.

   The finishing machine rails shall be placed on the top flange of the exterior beams.

   The girders supporting cantilever forming brackets, shall be tied together at 4 foot intervals.

   The 4x4 in. hardwood beam blocks shall be installed between webs of beams in each bay prior to deck pours and shall not be removed until concrete reaches the required compressive strength.

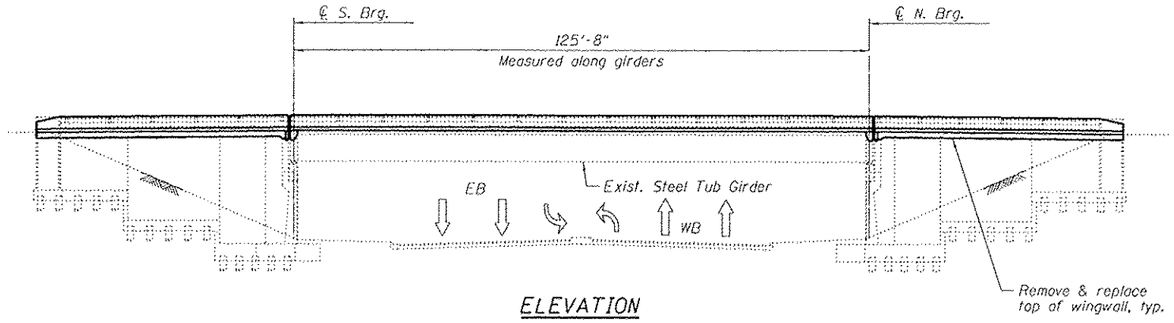
Bench Mark: CP41, cross-cut in median of 103rd street approximately 900' west of Stony Island Extension. Elevation 585.80.

Existing Structure: The existing bridges carrying northbound (SN 016-2441) and southbound (SN 016-2442) Stony Island Extension over 103rd Street are single-span structures with three steel plate tub girders each supporting a composite concrete deck with a 1⅝" bituminous overlay. The bridges have closed abutments founded on creosoted timber piles. The existing structures are each 125'-8" long from centerline to centerline of abutment bearings, measured along the girders, and each structure has an out-to-out width of 49'-0", measured radially. Each bridge will be separately closed to the traffic during construction.



ELEVATION
(Looking West)

SCOPE OF WORK

1. Remove HMA overlay and replace with latex concrete overlay.
2. Remove expansion joints and replace with strip seal joints.
3. Perform partial and full depth deck slab repairs.
4. Remove and replace parapets and approach slabs.
5. Perform concrete repairs and epoxy crack injections on abutments and wingwalls.
6. Remove and replace keeper angles (side retainers).
7. Clean and paint all exterior surfaces and portions of interior surfaces of steel tub girders.
8. Clean bearing seats.

GENERAL NOTES:

No field welding is permitted except as specified in the contract documents.

Reinforcement bars designated (E) shall be epoxy coated.

Prior to pouring new concrete, all heavy or loose rust, loose mill scale, and other loose or potentially detrimental foreign material shall be removed from steel surfaces in contact with concrete. Tightly adhered paint may remain unless otherwise noted. Removal shall be accomplished by methods that will not damage the steel and the cost will be included in the pay item covering removal of the existing concrete.

As directed by the Engineer, existing construction accessories welded to the top flange of beams and girders shall be removed. The weld areas shall be ground flush and inspected for cracks using magnetic particle testing (MT) or dye penetrant testing (PT) by qualified personnel approved by the Engineer. Any cracks that cannot be removed by grinding $\frac{1}{4}$ inch deep shall be identified and reported to the Bureau of Bridges and Structures for further disposition. The cost of removing welded accessories, grinding and inspecting weld areas and grinding cracks will be paid for according to Article 109.04 of the Standard Specifications.

Plan dimensions and details relative to existing plans are subject to nominal construction variations. The Contractor shall field verify existing dimensions and details affecting new construction and make necessary approved adjustments prior to construction or ordering of materials. Such variations shall not be cause for additional compensation for a change in scope of the work, however, the Contractor will be paid for the quantity actually furnished at the unit price bid for the work.

The existing structural steel coating contains lead. The Contractor shall take appropriate precautions to deal with the presence of lead on this project.

Cleaning and painting of the existing structural steel shall be as specified in the Special Provision for "Cleaning and Painting Existing Steel Structures". All existing steel surfaces accessible from outside the tub girders, including the access doors, and select surfaces inside the tub girders shall be cleaned per Near White Blast Cleaning - SSPC-SP10. The select surfaces to be cleaned inside the tub girders are all surfaces within 15 ft. (measured along the girders) of the girder ends, including the access doors, and the full length of the underside of all top flanges.

The designated areas cleaned per Near White Blast Cleaning shall be painted according to the requirements of Paint System 1 - OZ/E/U. The color of the final finish coat for all surfaces accessible from outside the tubs shall be Reddish Brown, Munsell No. 2.5 YR 3/4. The color of the final finish coat for surfaces inside the tubs shall be Gray, Munsell No. 5B 7/1.

All new structural steel shall be shop painted with an inorganic zinc-rich primer per AASHTO M 300, Type 1.

The existing name plates shall be removed, cleaned and installed in the new parapet at the same location as existing. Cost included with Concrete Superstructure.

After painting is complete, all steel surfaces inside the tub girders shall be power washed and dried. Any standing water and construction items shall be removed from inside the tub girders after power washing. Cost included with Cleaning and Painting Steel Bridge No. 2 and No. 3.

The inside of each tub girder is considered a confined space and entry must comply with applicable OSHA regulations.

Bridge Deck Scarification will be performed concurrently with full temporary night time closures of 103rd Street.

The minimum thickness of the concrete overlay shall be $2\frac{1}{4}$" and shall vary as required to adjust for the existing profile grade and beam camber/deflection.

Joint opening shall be adjusted according to Article 520.04 of the Standard Specifications when the end of deck concrete is poured at an ambient temperature other than 50° F.

All existing hinges for all tub girder access doors shall be lubricated to the satisfaction of the Engineer. Cost included with Cleaning and Painting Steel Bridge No. 2 and No. 3.
