Bench Mark: U.S. Coast and Geodetic Survey brass disk set in the top of the south west wingwall of the State Route 9 bridge over Mud Creek. Elevation = 578.580

Existing Structure 090-0062: This Structure is a two simple span, precast, prestressed concrete multi-box beam bridge on closed concrete abutments and a concrete pier. It carries IL Route 9 at 0 degree skew over Mud Creek in Tazewell County. The original structure was built in 1928 as S.B.I. Rt 164 Sec 119B. The total length of the Structure is 126.21 feet from back to back of abutments, and it has a width of 33 feet. In 1975, under construction Route SBI Rt. 164, Sec. 119 BR, the original superstructure was removed and replaced with PPC box beams and a bituminous wearing surface. In 2008 temporary support was added at the pier and abutments. Existing structure to be removed. No salvage. (Existing upstream abandoned railroad sub-structure also to be removed). Existing temporary steel beams and supports to be delivered to the E. Peoria IDOT Bridge Yard (call 309-699-3822 to arrange for IDOT to unload when delivered).

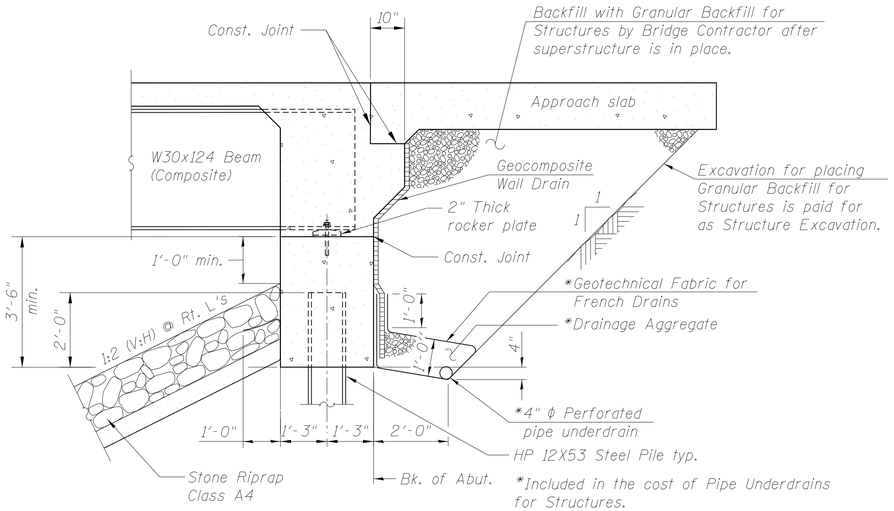
GENERAL NOTES

1. Fasteners shall be ASTM A325, Type 1, mechanically galvanized bolts in painted areas, ASTM A325 Type 3 in unpainted areas, Bolts $\frac{7}{8}$" ϕ, holes $\frac{15}{16}$" ϕ, unless otherwise noted.
2. Calculated weight of Structural Steel = 162,150 lbs
3. All structural steel shall be AASHTO M 270 Grade 50W.
4. No field welding is permitted except as specified in the contract documents.
5. Reinforcement bars designated (E) shall be epoxy coated.
6. Bearing seat surfaces shall be constructed or adjusted to the designated elevations within a tolerance of $\frac{1}{8}$ in. (0.01 ft.). Adjustment shall be made either by grinding the surface or by shimming the bearings.
7. Structural steel shall only be painted for a distance equal to the depth of embedment into the concrete cap plus 3 inches. Painted areas shall be primed in the shop with a Department approved zinc rich primer. Field painting will not be required.
8. Layout of the slope protection system may be varied to suit ground conditions in the field as directed by the Engineer.
9. The Contractor shall retain the services of an engineering firm, prequalified in the IDOT consultant selection category of Highway Bridges, for preparation of the Structural Assessment Report(s). Contractor's pre-approval shall not be applicable for this project. See Special Provision.
10. Current Ratings on File for Existing Structure
    Inventory: HS 6
    Operating: HS 10
    Live Load Restrictions: None
    Inventory and Operating Ratings and Live Load Restrictions are provided for information only. Inventory and Operating Ratings are based on HS Loading and configuration. Live Load Restrictions are based on Illinois legal loads and configurations. The Ratings and Live Load Restrictions are not necessarily representative of capacities to support the Contractor's equipment.
11. The Contractor is advised that the existing structure contains members with longitudinal cracks that are supported by temporary shoring that are in a deteriorated condition with reduced load carrying capacity. It is the Contractor's responsibility to account for the condition of the existing structure when developing construction procedures for the complete or partial removal, or replacement of the structure. An Existing Structure Information Package is available upon request as noted in the special provisions.



SECTION THRU INTEGRAL ABUTMENT

(Horiz. dim. @ Rt. L's)

All drainage system components shall extend to 2'-0" from the end of each wingwall except an outlet pipe shall extend until intersecting with the side slopes. The pipes shall drain into concrete headwalls. (See Article 601.05 of the Standard Specifications and Highway Standard 601101)

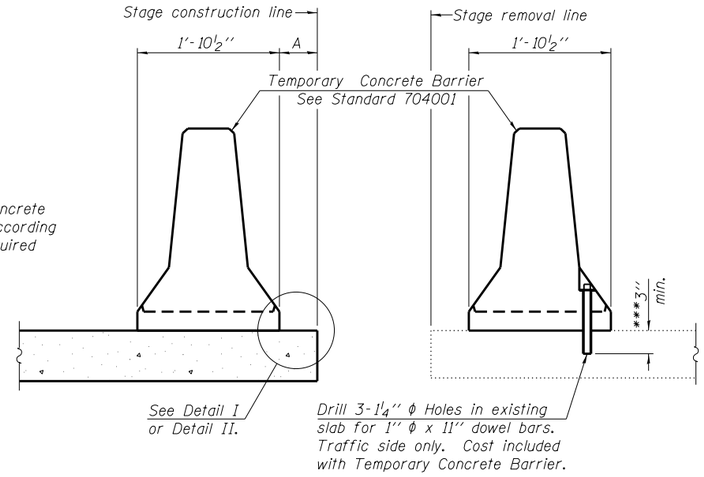
When "A" is 3'-6" or less, the temporary concrete barrier shall be anchored to the new slab according to Detail I or Detail II. No anchorage is required when "A" is greater than 3'-6".



SECTIONS THRU SLAB OR DECK BEAM

NOTES

Detail I - With Bar Splicer or Couplers:
Connect one (1) 1'' x 7' 'x ''W'' steel ℙ to the top layer of couplers with 2-⅝'' ϕ bolts screwed to coupler at approximate ℄ of each barrier panel.

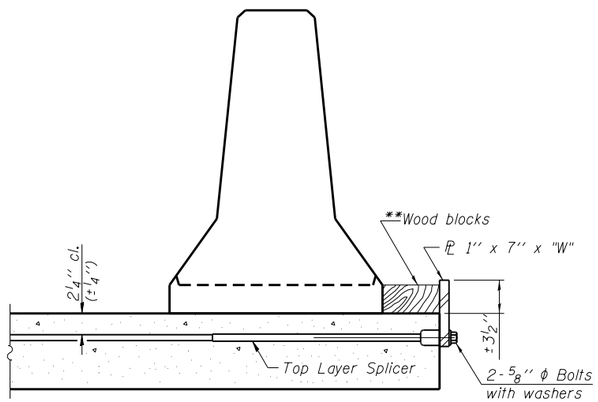
Detail II - With Extended Reinforcement Bars:
Connect one (1) 1'' x 7'' x ''W'' steel ℙ to the concrete slab or concrete wearing surface with 2-⅝'' ϕ Expansion Anchors or cast in place inserts spaced between the top layer of reinforcement at approximate ℄ of each barrier panel.

Cost of anchorage is included with Temporary Concrete Barrier.

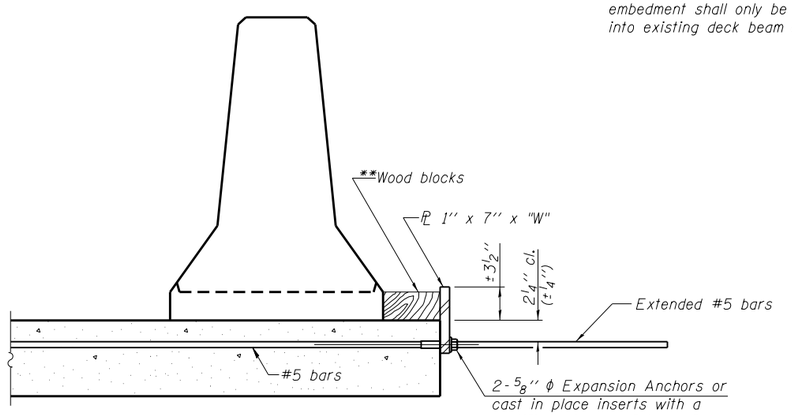
The 1'' x 7'' x ''W'' plate shall not be removed until stage II construction forms and all reinforcement bars are in place and the concrete is ready to be placed.

*** Dimension shown is minimum required embedment into concrete. If hot-mix asphalt wearing surface is present, minimum embedment shall be in addition to wearing surface depth.

**** If existing deck beam is to remain in place after stage construction, embedment shall only be into wearing surface and not into existing deck beam concrete.



DETAIL I



DETAIL II

** Wood blocks may be omitted when required to provide minimum stage traffic lane width. When the wood blocks are omitted, the concrete barrier shall be in direct contact with the steel retainer plate.

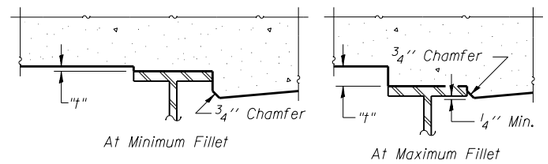
DEAD LOAD DEFLECTION DIAGRAM

(Includes weight of concrete only).

Note:
The above deflections are not to be used in the field if the engineer is working from the grade elevations adjusted for dead load deflections as shown on sheets S06 thru S08 of S26.



To determine "t": After all structural steel has been erected, elevations of the top flanges of the beams shall be taken at intervals shown above. These elevations subtracted from the "Theoretical Grade Elevations Adjusted for Dead Load Deflection" shown on sheets S06 thru S08 of S26, minus slab thickness, equals the fillet heights "t" above top flange of beams.
