Memorandum

To:	D. Carl Puzey	Attn: Patrik D. Claussen
From:	Scott W. Neihart	By: Timothy J. Brandenburg
Subject:	Bridge Condition Report – Region 3 / District 5	
Date:	June 1, 2017	

Route: FAI 74 *Job No.: P-95-029-17*
Section: (92-11)BR-1 *S.N.: 092-0007 WB (E)*
County: Vermilion *S.N.: N.A. (P)*
Crossing: Salt Fork Vermilion River *PTB / Item: NA* *Contract: 70A92*

Prepared By: Region 3 / District 5 *File Name: 0920007BCR-20170601*
Date Prepared: June 1, 2017

An electronic copy of the Region 3 / District 5 prepared Bridge Condition Report for SN 092-0007 (E) has been sent to: dot.bbs.planning@illinois.gov for your review and approval.

SN 092-0007 is a seven span fracture critical steel beam structure that carries FAI 74 westbound over the Salt Fork Vermilion River west of Danville and one mile east of the US 150 Interchange. The District proposes Bridge Rehabilitation – Superstructure Replacement for this structure.

A Proposed Structure Sketch and Plan/Profile sheets have been included.

This superstructure replacement is programmed for a November 2019 Letting.

The proposed details are subject to refinement during TSL development.

Contact: Timothy J. Brandenburg at (217) 465-4181 ext. 211.

Timothy J. Brandenburg, P.E.
Bridge & Hydraulics Engineer
Region 3 / District 5

Operating Rating HS:	1.840
Sufficiency Rating:	76.3
Bridge Posting Level:	No Posting Required

Construction / Reconstruction / Repair History:

Structure 092-0007 (WB) was built in 1962 as FAI 74, Section 92-11B, Contract 20973F at Station 1755+16 in Vermilion County. The structure carries FAI 74 westbound over the Salt Fork Vermilion River. In 1977 the structure was repaired with improvements consisting of deck patching, expansion device reconstruction, installation of waterproofing membrane system and hma overlay. Plans for the 1977 repairs have not been found, however these improvements are shown as noted on the 1991 GP&E sheet. In 1991 the structure was rehabilitated with improvements consisting of deck replacement, replacement of 12 of 66 floor beams, various bolt, hanger and other structural steel repairs, neoprene expansion joints, drainage scuppers, replacement of all bearings, substructure repairs at Pier 1A and A3 riprap scour protection as Section 92-11BR, Contract 90165. In 2008 the structure received scour mitigation improvements consisting of placing A4 and A5 riprap around Piers 2 and 3, as Section D5 Scour Mitigation 2008-1, Contract 70013.

Bridge Crew Repairs: In 2006, the neoprene expansion joints at the east abutment and pier1a were replaced with polymer concrete and silicone joints. In 2008, the east abutment vaulted abutment door was replaced. In 2017, a gusset plate connecting cross bracing to the north girder at pier 1a, span 1a and connecting vertical tie rod were replaced.

II. Physical Description of Structure:

Structure 092-0007 (WB) carries FAI 74 over the Salt Fork Vermilion River west of Danville and 1 mile east of the US 150 Interchange. Due to foundation issues during original construction, an additional 93' simple span was added to the west end of this structure, thus moving the west abutment back and creating an overall structure length of 750'-2". Therefore, the original structure consists of one simple 93' span and six continuous spans (1 @ 93', 4 @ 116', 1 @ 93') for a back to back abutment length of 750'-2" with a 9" reinforced concrete deck on two 84" riveted steel plate girders with 66 steel floor beams (24WF94) supported by six double column piers (piers 1a thru 3 on spread footing and piers 4 & 5 with steel piles) and vaulted abutments with spread footing under the west and concrete piles under the east. The clear deck width is 30'-0" with 3'-0" curbs for an out to out width of 36'-0". The structure is built 90° to FAI 74.

The existing structure consists of one simple 93' span and six continuous spans (1 @ 93', 4 @ 116', 1 @ 93') for a back to back abutment length of 750'-2" with a 9" reinforced concrete deck on two 84" riveted steel plate girders with 66 steel floor beams (24WF94) supported by six double column piers (piers 1a thru 3 on spread footing and piers 4 & 5 with steel piles) and vaulted abutments with spread footing under the west and concrete piles under the east. The clear deck width is 32'-10" with 1'-7" parapets for an out to out width of 36'-0". The structure is built 90° to FAI 74.

The structure is on a horizontal tangent and on a vertical tangent with a profile grade of 2.4% located between a crest and sag vertical curves. There are utilities attached to the abutment seat and wingwalls of the west vaulted abutment. Overhead electric lines are present well north of these structures.

The FAI 74 approach roadway consists of two 12'-0" lanes with 10'-0" outside and 4'-0" inside hma shoulders. Shoulder break lines are at 12'-0" outside and 8'-0" inside.

III. Field Inspection & Physical Evaluation:

Superstructure:

Deck: The bare deck is in overall poor condition with advanced deterioration. The deck soffit has numerous leaching transverse, longitudinal and map cracking at less than 2' intervals throughout, but overall appears solid with minimal patching anticipated. The drainage scuppers with 6" down spouts are in good condition, at correct locations and length. The parapets exhibit some vertical cracks and map cracking, but are still in good condition.

Beams: The two main girders and 66 floor beams are in overall poor condition with advanced deterioration. There is moderate rust throughout with heavy rust at beam ends and diaphragms under the joints. The two main 84" girders exhibit initial section loss around 5% and have thousands of tack welds between members which could become initiation points for fatigue cracks. The 1991 rehabilitation attempted to grind out the tack welds, but in most cases only the tops were ground, leaving the members bonded and gouging of the girder webs in the process. These locations now exhibit heavy rusting. See Attachment C4 0920007 Fracture Critical Inspection 9.9.2015 for detailed inspections comments. The lead paint system was last painted in May 1998 and is failing with corrosion present throughout.

Joints: The joints are in poor condition with deterioration and leaking. The west abutment joint remains a preformed joint seal and the hatch block is in poor condition. The east abutment and the Pier 1A neoprene joints have been replaced with polymer nosing and silicone, but have been continually leaking for a lengthy period of time in spite of Bridge Crew repairs over the

years. These leaking joints have led to a significant amount of substructure deterioration, especially at Pier 1A.

Bearings: The abutment bearings and pier bearings 1 through 5 exhibit moderate rust and corrosion while Pier 1A bearings exhibit a significant amount of rust. It is difficult to confirm, but is anticipated that none of these bearings functioning properly.

Substructure:

Abutments: The vaulted abutments are in overall fair condition with some deterioration. Both abutments exhibit map cracking and leaching in the interior walls and soffit and have an HMA wearing surface which is worn and map cracked. The backwalls and wingwalls exhibit vertical and map cracking with some delamination, spalling and exposed reinforcement. The west abutment has been identified for 44.0 sq. ft. of Structural Concrete Repair (SCR), approximately 12% of the abutment face area and 10.0 sq. ft. of SCR along the beam seat face. The wingwalls exhibit leaching cracks and some delamination for an area of 38.0 sq. ft. of SCR. The east abutment has 10.0 sq. ft. of SCR on the abutment face and 6.0 sq. ft. of SCR on the beam seat. The wingwalls exhibit leaching cracks and minor delamination for an area of 2.0 sq. ft. of SCR.

Piers: Pier 1A is in poor condition due to the leaking expansion joint with areas of delamination, spalling and exposed reinforcement in the columns and has been identified for 278.0 sq. ft. of Structural Concrete Repair. The three transverse tie members are in poor condition with advanced deterioration and should be replaced entirely. Piers 1 thru 5 are in good condition with minor deterioration and identified for a combined 71.0 sq. ft. of SCR. Pier 1 transverse tie members have the most deterioration with the remaining in very good condition. There is minor erosion present along the west face of pier 5.

Slope Protection: The west slopewall is protected with 6" concrete and is in poor condition with most of the area broken and failing with trees and vegetation growing through cracks and voids. Due to addition of the west simple span, the west slopewall is very steep at 1.2:1 and difficult to maintain. The 5' paved ditch at the bottom of slopewall is broken and in poor condition. The 12" storm sewer which drains from the west slopewall to just west of Pier 2 is in poor condition and not draining effectively. The east slopewall is protected with A3 and A4 riprap and is in good condition. The concrete gutter along the beam seat is in poor condition and likely drains north to the median area as an outlet to the south has not been located.

Scour Protection: The scour protection is in good condition due to the scour mitigation contract in 2008. Pier 2 along the west bank is protected with sheet piling and large portions of the original parapets from the deck replacement. Pier 3 along the east bank is protected with A5 riprap. Piers 2 & 3 have been on Annual Special Feature Inspections for scour critical evaluation monitoring since 2004. Pier 5 had A4 riprap installed along a portion of the west face in 2008, however the erosion area has expanded and should have additional A4 placed.

Inspection History (NBIS Ratings):

Year	Deck	Super	Sub	Scour
2016	4	5	7	8
2014	4	5	7	
2012	5	6	7	

Geometric, Horizontal & Vertical Clearance / Hydraulic Data:

Geometrically, the alignment criteria for the existing structure are adequate. The existing 32'-10" deck clear width does not meet the required 38'-0" clear width for existing bridges to remain in place as indicated in Figures 39-6.A and 44-5.A of the BDE Manual. A design exception with an analysis to determine cost effectiveness of improving this clear width and satisfactory safety record would be required to retain the use of this superstructure. As a reconstruction, the required clear width is 40'-0" consisting of two 12'-0" lanes with 10'-0" outside and 6'-0" inside shoulders. The shoulder widths will vary to 8'-0" across the structure to allow for symmetry of substructure widening. Due to the large vertical clearance of approximately 53' between the proposed low beam elevation and 50 year natural high water elevation, an Abbreviated Hydraulic Report is anticipated.

1962 Original Vertical Information (CN 20973):

	Sta.	Elev.	Grades, Type, Length

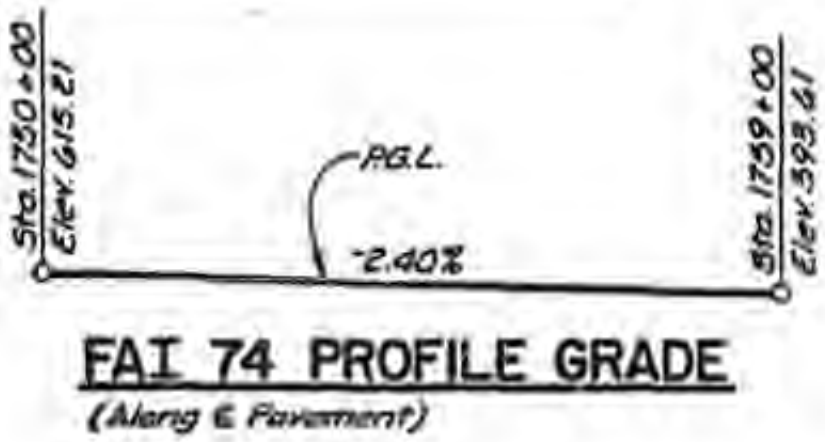
Sta. 1759+00; Elev. 593.18

1991 Rehabilitation Vertical Information (CN 90165):



FAI 74 PROFILE GRADE
(Along ℄ Pavement)

Potential Scope of Work & Analysis:

1. Rehabilitation – B-SMART or Deck Repair: An analysis has not been completed for this scope of work due to the fracture critical nature, condition and age of the superstructure. Though the deck condition and age suggest this scope of work may be considered, the narrow clear width of 32'-10" would remain and is well short of the 38'-0" required bridge width to remain in place. Therefore, it is not recommended or considered cost-effective to pursue this scope of work for a fracture critical structure with a less than required clear width.

2. Rehabilitation – Deck Replacement: An analysis has not been completed for this scope of work due to the fracture critical nature, condition and age of the superstructure. The deck was replaced on this structure in 1991 and the existing two main girder with floor beam system could not support a wider structure than 36'-0" out to out, 32'-10" clear width without widening. Therefore, it is not recommended or considered cost-effective to pursue this scope of work for a fracture critical structure with a less than required clear width.

3. Rehabilitation – Superstructure Replacement (7 span): This option would involve removal of the existing superstructure, widening and repair of all eight substructure units and placement of superstructure with 6 – 45" plate girder beam lines to provide a policy 40'-0" clear width. Approach slab replacements to meet roadway width and cross-over traffic control costs are included. The estimated structure cost of this Superstructure Replacement (7 span) is $8,481,219. Costs associated with Painting or Metalizing are included. No Utility or Land Acquisition costs are incurred. Preliminary Engineering is to be completed by BBS, so no costs are incurred. The overall cost of Alternative 3 is 53% of the cost of Alternative 5.

4. Rehabilitation – Superstructure Replacement (6 span): This option would eliminate the east span 6 and involve removal of the existing superstructure, partial removal of the east abutment, retrofit of pier 5 to the proposed east abutment, widening and repair of the remaining six substructure units and placement of superstructure with 6 – 45" plate girder beam lines to provide a policy 40'-0" clear width. Approach slab replacements to meet roadway width and cross-over traffic control costs are included. The estimated structure cost of this Superstructure Replacement (6 span) is $7,889,049. Costs associated with Painting or Metalizing are included. No Utility or Land Acquisition costs are incurred. Preliminary Engineering is to be completed by BBS, so no costs are incurred. The overall cost of Alternative 4 is 93% of Alternative 3 and 49% of the cost of Alternative 5.

5. Complete Replacement: This option would involve the complete removal and replacement of the entire structure. The proposed structure would consist of 3 – 210' spans with 6 - 84" plate girders for a 635'-0" bk. to bk. of abutment length with vaulted approach spans. Substructure units where positioned to provide greater clearance from the Salt Fork Vermilion River banks thus avoiding future scour issues and to avoid existing substructure units. Depths of the substructure units mirror the existing conditions as mining activities are present at this structure, especially west of the SFVR. The proposed clear width is 40'-0" with an out-out width of 43'-2". Approach slab replacements to meet roadway width and cross-over traffic control costs are included. The estimated cost of Complete Replacement is $16,033,358. Costs associated with Painting or Metalizing are included. No Utility or Land Acquisition costs are incurred. Preliminary Engineering is to be completed by BBS, so no costs are incurred. The overall cost of Alternative 5 is approximately twice the cost of Alternative 3 and Alternative 4, respectively.

V. Discussion and Recommended Scope of Work:

Alternative 5, Complete Replacement at this time does not fit the overall life cycle of this structure. The substructure is in overall good condition, has only 55 years of service and can be repaired effectively to allow re-use. The remaining service life of these large, deep substructure units is expected to be around 40 years.

Alternative 4, Rehabilitation - Superstructure Replacement (6 span) is 49% of the cost of complete replacement and fits the life cycle of this structure more appropriately. This alternative provides a 40'-0" clear width and shortens the structure by eliminating the east span. However, this does eliminate floodplain access above the natural design highwater elevation under the structure on the east end which has been used by both public and private parties in the past. The remaining five piers can be repaired and widened effectively to allow for re-use. Pier 1A has the majority of the repairs with the other four piers requiring minimal repairs. To provide symmetry of substructure pier cap widening as shown in the Proposed Typical Pier Cap sheet, the proposed shoulder widths will need to be 8'-0" across the structure and will vary from 10' and 6' along the roadway typical to 2 – 8's along the structure typical. The west abutment will be retrofitted to accommodate the proposed 40'-0" clear width as shown in the Proposed Typical Abutment Rehabilitation sheet. The east abutment will be relocated to pier 5 and pier 5 retrofitted to an abutment to accommodate the proposed 40'-0" clear width. The cost of this alternative is within 10% of alternative 3.

Alternative 3, Rehabilitation - Superstructure Replacement (7 span) is 53% of the cost of complete replacement and fits the life cycle of this structure more appropriately. This alternative provides a 40'-0" clear width and re-uses the entire substructure. The six piers can be repaired and widened effectively. Pier 1A has the majority of the repairs with the other five piers requiring minimal repairs. To provide symmetry of substructure pier cap widening as shown in the Proposed Typical Pier Cap sheet, the proposed shoulder widths will need to be 8'-0" across the structure and will vary from 10' and 6' along the roadway typical to 2 – 8's along the structure typical. Both abutments will be retrofitted to accommodate the proposed 40'-0" clear width as shown in the Proposed Typical Abutment Rehabilitation sheet. The cost of this alternative is within 10% of alternative 4.

Based on this discussion; Alternative 3: Rehabilitation – Superstructure Replacement (7 span) is recommended.

Due to the existing fracture critical structure type, the only method of traffic control is to construct cross-overs. A width restriction will be required.

The contract is currently programmed for a November 2019 Letting.

The Bureau of Bridges and Structures is scheduled for the preliminary engineering and structure plans. Details are subject to refinement during the TS&L Phase.

The SGR will be prepared by a District Consultant.

An Abbreviated Hydraulic Report will be prepared, approved and submitted by the District at a later date.

92C– Inspection Interval: (months): 12 92C4– Initiated By: _____ If "4-Other Agency" Describe: _____

92C2– Start Date: 7/27/04 92C6– Determination Date: __/__/____ 92C7 – Inspect By Date: __/__/____

92C1– Type Code:

- ☐ A – Structural Damage/Steel Superstructure
- ☐ B – Structural Damage/Concrete Superstructure
- ☐ C – Structural Damage/Timber Superstructure
- ☐ D – Structural Damage/Steel Substructure
- ☐ E – Structural Damage/Concrete Substructure
- ☐ F – Structural Damage/Timber Substructure
- ☐ G – Underwater/Debris and/or Erodible Soil
- ☐ H – Underwater/Flow Restriction or Velocity
- ☐ I – Underwater/Spread footings not adequately keyed into rock or protected from the effects of streambed scour
- ☐ J Reserved
- ☑ K – Underwater/Scour Critical Evaluation Monitoring
- ☐ L – Existing Streambed Scour/Spread Footing
- ☐ M – Existing Streambed Scour/Pile Supported Footing
- ☐ N – Existing Streambed Scour/Pile Bent Substructure Unit
- ☐ P – Embankment Movement or Settlement
- ☐ Q – Substructure Movement or Settlement
- ☐ R – Pin & Link in Multi-Girder (Redundant) Bridge (If checked must add BBS Form(s) 2760 and 2780 if needed)
- ☐ S – Specifically Identified Problematic Structural Details
- ☐ T – Deck
- ☐ Z – Other (Describe):

92C5 – Special Feature Type Remarks: Rip Rap around P3 w/ 8.8' minimum Cover to top of footer. P2 protected by Sheet Piling w/ 10.7' minimum Cover to Bottom of sheet piling

SPECIAL FEATURE INSPECTION

93C1 – Special Feature Condition Status:

Prev	New	
☐ 0	☐ 0	- Worsening Condition Indicating Imminent Structural Failure - Immediate closure required, then contact BBS
☐ 1	☐ 1	- Progression of Deterioration or Worsening Condition - Contact BBS, Program Manager, and SFI Initiator
☐ 2	☑ 2	- No Change in Condition Noted
☐ 3	☐ 3	- Corrected Condition Noted - SF inspections no longer required after verification by BBS personnel
☐ 4	☐ 4	- Feature Determined to be in Adequate Condition - Primarily for monitoring problematic structural details

FRACTURE CRITICAL INSPECTION
092-0007 I-74 WB

September 9th and 10th, 2015

Inspected by: Jason A. Lee and Shawn D. Conklin

Equip. used: Springfield's 2008 A-62 Aspen under bridge inspection truck Operated by Paul Carpenter of the State-Wide Bridge Crew

Structure: 7 Spans, 2 Riveted Plate Girders with Floor Beams and Cross Members.

Logistics: Access was accomplished using the Central Bureau's 2008 A-62 Aspen under bridge inspection truck. WBPL & EBPL interstate lane closures were set by Danville Storage in accordance with case number WZ 42 of the Operations Work Site Protection Manual. We closed the passing lanes to also allow the Bridge Crew to be able to fix a median erosion problem along the vaulted abutment wings at the east abutment of both structures. The A-62 hoist works off both sides of the truck chassis; therefore utilization of the passing lanes worked out well. Illinois State Police GABZ Patrols were also utilized to enforce speed limits on the traveling public.

Inspection: All tensile areas of the Fracture Critical Riveted Plate Girders were visually inspected at arms length. The tensile areas include the bottom half of the girders in simple spans, the top half of the girders for 30' each side of the piers in the continuous spans (30' is at the splice location), and the bottom half of the girders for 60' in the middle of the continuous spans. Emphasis was placed on the documented tack welds between the web plate and flange-to-web connection angle in the tensile zones, splice connections, cross-brace connections to the main girders, and out of plane bending. Tack welds in tension zones were supposed to have been ground off during the structure rehabilitation in 1992. In most cases the top of the weld was ground off but the bond between members was not severed. In the remaining cases the welds were not touched at all. The last several years, a greater emphasis has been placed on the six "shop web splices". These splices have a 3/8" filler plate on the vertical portion (web portion) of the flange-to-web connection angle. Pack rust has started to develop in the corners of the fill plates.

Findings: The attached diagram, field notes, and photos show areas of interest that have been documented by District 5 forces during Fracture Critical Inspections since 1990. Each area of interest is lettered with a description of the observations. Pictures of various points of interest are also attached and lettered to match the diagram when appropriate.

Throughout the structure various bends, nicks, and gouges can be found on the girders. These imperfections were most likely caused during fabrication, transportation, or erection of the members during original construction. These imperfections have been in service since 1962 with no documented problems. The most severe cases have been documented in this report, with no evidence of distress in the field to date. These locations will continue to be closely monitored in subsequent inspections.

The failure of the paint system continues to play an increasing larger role in the overall condition of this structure. In localized areas, deterioration has grown beyond surface rust and developed into areas of pitting, scaling, or pack rust. The most notable locations of deterioration are at the locations of the six "shop web splices". These splices have a 3/8" filler plate on the vertical portion (web portion) of the flange-to-web connection angle. Moderate to heavy pack rust has developed in the corners behind the fill plates. This condition is worse on the splice on the outside of the girders. The side of the splice on the inside of the girders is protected more from the elements and is therefore in better condition. Since the 3/8" filler plates have little to do with the structural capacity of the members, the main concern is the extent of the deterioration to the flange-to-web connection angle behind the 3/8" fill plate. After heavy scraping by inspectors, it appears that section loss of the flange-to-web connection angle is minor. The majority of the pack rust appears to be created from the 3/8" fill plate as evidenced by the "fanning" of the fill plate. A portion of the surface of the flange-to-web connection angle behind the 3/8" fill plate has rust scaling, but no major pitting at this time. No broken rivets have been found to date.

The District 5 Bridge Crew replaced the joint at Pier 1A in the summer of 2006 with polymer nosing and silicone. The wide joint and large movements have made it difficult for the silicone to perform maintenance-free. Joint opening has typically been 3"-3½" at inspection time and sees a significant amount of expansion and contraction throughout the year. The performance of the silicone has been fair with a few holes and tears. This joint receives routine maintenance. The current joint is performing better than the old block and bladder joint. The efforts of the District Bridge Crew have greatly reduced leakage at this joint.

In 2015, two hanger rod locations that support the cross bracing were in need of repair. In Span 1A, the 1st hanger rod from the west was broken and was replaced by the inspectors. Also, in Span 1A, the 4th hanger rod from the west

was loose and was tightened by the inspectors. The Bridge Crew has hanger rod replacements ready to go and stored in Tuscola.

The poor attempt at removing the tack welds during the 1992 rehabilitation, has made inspection of the tack welds more difficult. The bond between members was not broken and the paint in the immediate area near the tack welds was disturbed. These areas are now starting to surface rust. No cracks or broken tack welds were found at this time.

All other minor problems or deficiencies are shown and discussed in the attached diagram, field notes, and photos. Tensile zones and the documented points of interest will continue to be monitored during future Fracture Critical Inspections.

Conclusions: While no major changes have taken place since the last inspection, the failure of the paint system has resulted in localized areas of scaling and minor pitting that could affect the structural capacity of individual members but not of the overall structure – most notably at the "shop web splices". The Fracture Critical Appraisal Rating (Item No. 93A1) is a "5" = "Fair – Rust scaling/pitting and/or minor nicks or gouges indicating measureable section loss which may affect structural capacity of individual members but not of the overall structure."

Pack rust at the "shop web splices" has not broken any rivets. No cracks or distresses were found in main members at nicks, gouges, or tack welds.

Fracture Critical Bridge Field Notes & Photos
092-0007 I-74 WB

A. 2009 / 2011 / 2013 / 2015 Shop Web Splice #1 – N. Girder Span 6 – Moderate pack rust in corners of the outside 3/8" fill plate at bottom of web. Minor pack rust in corners of the inside 3/8" fill plate at bottom of web. No broken rivets.

B. 2009 / 2011 / 2013 / 2015 Inside N. Girder Span 6 – Gouge on bottom flange – east end of second box. Smooth indentation with no jagged edges.

C. 1993/1999/2007/2009/2011/2013/2015 N & S Girders @ Pier 5 – Rivets removed for setting the new bearings during re-construction in 1992. See 1993 report from Frauenhoffer and Assoc. and correspondence between D-5 Construction, BB&S, O'Neil Bros., Frauenhoffer, and ESCA Consultants. Removed rivets for placement of bearings can be found at various substructure units, not just @ Pier 5.

D. 2007 / 2009 / 2011 / 2013 / 2015 Bearings at Pier 1 and Pier 5 are not centered on the top of the Pier columns on both 092-0006 & 092-0007.

E. 1999/2004/2007/2009/2011/2013/2015 Span 6 – 2nd set of horizontal cross bracing from the east are bent upward. Not causing any apparent problems.

F. 2007 / 2009 / 2011 / 2013 / 2015 Shop Web Splice #2 – S. Girder Span 6 – Heavy pack rust in the corners of the outside 3/8" fill plate at bottom of web. After heavy scraping by inspectors, it appears that section loss of the flange-to-web connection angle is very minor. The majority of pack rust appears to be created from the 3/8" fill plates as evidenced by the "fanning" of the fill plate. No broken rivets found. The inside 3/8" fill plate exhibits minor to moderate rust in the corners.

G. 1999/2005/2007/2009/2011/2013/2015 Inside N. Girder Span 5 – Loose bolt on bottom vertical gusset – 3rd vertical gusset from pier 4 / 1st vertical gusset from pier 5.

H. 1999/2005/2007/2009/2011/2013/2015 Inside N. Girder Span 5 – Bent gusset for horizontal cross member – NE plate, first box east of pier 4

I. 2009 / 2011 / 2013 / 2015 Inside S. Girder Span 5 – Bent vertical stiffener – 2nd box east of pier 4

J. 2009 / 2011 / 2013 / 2015 Outside S. Girder Span 5 – Typical paint failure and rusting – top of bottom flange – has progressed slightly beyond surface rust, but has not started to pit.

K. 2009/2011/2013/2015 Outside S. Girder Span 5 – Light gouges in top flange just west of pier 5.

L. 2009 / 2011 / 2013 / 2015 Outside N. Girder over Pier 4 – Light gouges in top flange.

M. 2007 / 2009 / 2011 / 2013 / 2015 Outside S. Girder Span 4 – West splice is wavy / warped.

N. 2009 / 2011 / 2013 / 2015 Outside N. Girder Span 3 – Typical paint failure – top flange at west splice in span 3.

O1. 2013 / 2015 Outside S. Girder Span 4 – Top flange west of west splice, top plate is bent / nicked / gouged just east of pier 3.

O2. 2007 / 2009 / 2011 / 2013 / 2015 Outside S. Girder Span 3 – Top flange east of east splice, top plate is bent / nicked / gouged just west of pier 3.

P. 2009 / 2011 / 2013 / 2015 Inside N. Girder Span 2 – Web streaks / surface deformations near Pier 2.

Q. 1999/2005/2007/2011/2013/2015 Inside S. Girder Span 2 – Broken rivet head / slice in gusset – 1st vertical brace west of pier 2. No damage to bottom flange is apparent.

R. 2007 / 2009 / 2011 / 2013 / 2015 Outside & Inside S. Girder Span 2 – Bottom flange to web angle east of west splice – tack weld partially ground out w/ a thin grinder wheel, almost looks like a broken weld but is not.

S. 2007 / 2009 / 2011 / 2013 / 2015 Outside S. Girder Span 2 – West of west splice – Bottom of web exhibits various gouges – compression zone therefore not as critical, continue to monitor. No shear distress evident.

T. 2009 / 2011 / 2013 / 2015 Shop Web Splice #3 – N. Girder Span 1 – Minor pack rust in corners of the outside 3/8" fill plate at bottom of web. Little to no rust in corners of the inside 3/8" fill plate at bottom of web. No broken rivets.

U. 2009 / 2011 / 2013 / 2015 Shop Web Splice #4 – S. Girder Span 1 – Minor to moderate pack rust in corners of the outside 3/8" fill plate at bottom of web. Little to no rust in corners of the inside 3/8" fill plate at bottom of web. No broken rivets.

V. 2009 / 2011 / 2013 / 2015 Shop Web Splice #5 – N. Girder Span 1A – Little to no rust in corners of the 3/8" fill plates at bottom of web on both the inside and outside of the girder. No broken rivets.

W. 2009 / 2011 / 2013 / 2015 Shop Web Splice #6 – S. Girder Span 1A – Minor pack rust in corners of the outside 3/8" fill plate at bottom of web. Little to no rust in corners of the inside 3/8" fill plate at bottom of web. No broken rivets.

X. 2007 / 2009 / 2011 / 2013 / 2015 Span 1A – High volume of tack welds between the bottom flange angle and the web. None have been ground out. Tension zone in Span 1A is bottom half of girder for the entire length of Span 1A (simple span). Continue to monitor.

High volume of tack welds applies to:

S. Girder – Inside & Outside

N. Girder – Inside mostly (Outside has a few tack welds, but not as many)

Y. 1990 / 2009 / 2011 / 2013 / 2015 Lower portions of girders at west abutment are very close to the backwall. Has not proven to create a problem to date.

Z. 1990 N. Girder at Pier 3 – Tack weld between web stiffeners above bearing has possible cracked weld, if so it predates 1977 painting. No evidence that this is a working crack – even if it is it is unlikely to propagate into the web stiffeners. No problems found (2009/2011/2013/2015).

AA. 2009 / 2011 / 2013 / 2015 Outside S. Girder Span 1 – Paint Failure – just east of and at pier 1A.

BB. 2011 / 2013 / 2015 N. Girder at Pier 1A – West of Pier 1A – Typical corrosion under expansion joint at Pier 1A. Old neoprene joints were replaced by bridge crew in 2006 with polymer nosing and silicone. Joint opening is typically 3”-3½” and sees a significant amount of expansion and contraction. The performance of the silicone has been fair with a few hole and tears. The silicone has been repaired a few times. The current joint is performing better than the old block and bladder joint.

CC. 2011 / 2013 / 2015 Outside N. Girder Span 1A – Gouges, nicks, and dents along bottom flange – west of west field splice. No distresses evident.

DD. 2013 / 2015 Inside N. Girder Span 4 – at web splice just E of pier 3 – Top flange has extra bolt hole or has a misdrilled hole location.

EE. 2015 Inside N. Girder Span 5 – West of Pier 5 – Dent in bottom plate of top flange. No distresses evident. Continue to monitor.

FF. 2015 Inside N. Girder Span 3 – East of Pier 2 – Pencil markings, letters, and numbers that may look like a crack from the ground, but are only markings from a carpenters pencil.

GG. 2015 Span 1A – 1st hanger rod from the west supporting the cross bracing is broken. Replaced by inspector. The Bridge Crew has hanger rod replacements ready to go and stored in Tuscola. Span 1A – 4th hanger rod from the west supporting the cross bracing is loose. Hanger rod was tightened by inspectors.

Victor,

This repair was completed yesterday. The modified gusset detail by your unit keeping the old gusset in place while avoiding the bearing attachment bolts worked out very well – thank you.
Another job well done by the D-5 Bridge Crew.

Thanks,

Jason

Victor,

The details look good. I met with our Bridge Crew Lead Worker and OS and we are planning to complete these repairs in house. Material acquisition has begun this afternoon.

Thank you,

Jason

Mr. Lee:

Attached is a detail that we believe will restore the connectivity of the cross bracing. What we have done is to avoid getting into the area where the bearing stiffeners and bearing connecting bolts are located while still providing a connection of the diagonal bracing to the main girder and floorbeam.

To all please offer any comments as needed.

Subject: RE: Fracture Critical 092-0007 - broken cross bracing connection plate

Mr. Lee:

I do not think that eliminating this cross-brace is an option.

Looking at the detail it appears that the vertical tie rod at the mid-span of the cross-frame broke off and the subsequent flexing of the cross-frame fatigued the gusset plate which eventually broke off. Looking at the picture it looks like the vertical tie rod was not the original either because it appear to have been spliced before.

Anyway I agree that we do not want to get into trying to disconnect the bearing bolts for the pot bearings (which is very unlikely you will be able to remove). We will develop a detail for replacing the gusset plate and will send it to you for your consideration. The tie rod will need to be replaced too.

Subject: Fracture Critical 092-0007 - broken cross bracing connection plate

Victor,

We have a broken cross bracing connection plate (3/8”) on fracture critical structure 092-0007 (I-74 WB over the Salt Fork Vermilion River). This is at the north girder, span 1-A, pier 1-A. The cross bracing is resting / bouncing (under semi loading) on the pier cap. I have attached some photos and plans sheets showing the location.

This is the cross bracing in the 4th "box" from the west abutment in span 1-A. The hanger rod that secures the cross bracing in this "box" has broken and been replaced by our bridge crew a few times over the years. This time the 3/8" connection plate has also failed.

I don't suppose this is an option, but could the cross bracing in this "box" be removed? This would be the easiest option if allowed.

I am contemplating if replacement of the 3/8" connection plate could be accomplished by our bridge crew. The corrosion of the connection bolts could prove problematic for us. From the plans it also appears 2 bearing device bolts also go thru this 3/8" connection plate.

Tim Brandenburg saw the problem during a scoping review and notified me of the issue yesterday.
092-0006 & 0007 are tentatively scheduled for superstructure replacements in FY2020 – Contract 70A92 – Nov 2019 Letting.

GENERAL NOTES

All structural steel shall conform to AASHTO Classification M-270 Gr. 36, unless otherwise noted.

Fasteners shall be high strength bolts. Bolts $\frac{3}{4}''\phi$, open holes $\frac{13}{16}''\phi$, unless otherwise noted.

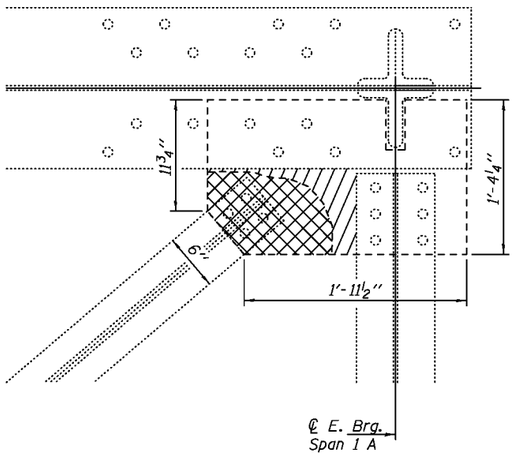
Plan dimensions and details relative to existing plans are subject to nominal construction variations. The Contractor shall field verify existing dimensions and details affecting new construction and make necessary approved adjustments prior to construction or ordering of materials. Such variations shall not be cause for additional compensation for a change in scope of the work, however, the Contractor will be paid for the quantity actually furnished at the unit price bid for the work.

Cost of removal and re-installation of all members necessary to complete the work as detailed on the plans and as specified in the Special Provisions shall be included with Structural Steel Repair.

The existing structural steel coating contains lead. The Contractor shall take appropriate precautions to deal with the presence of lead on this project.

Existing structural steel that will be in contact with new structural steel shall be cleaned and painted prior to erection as required by the GBSP "Cleaning and Painting Contact Surface Areas of Existing Steel Structures".

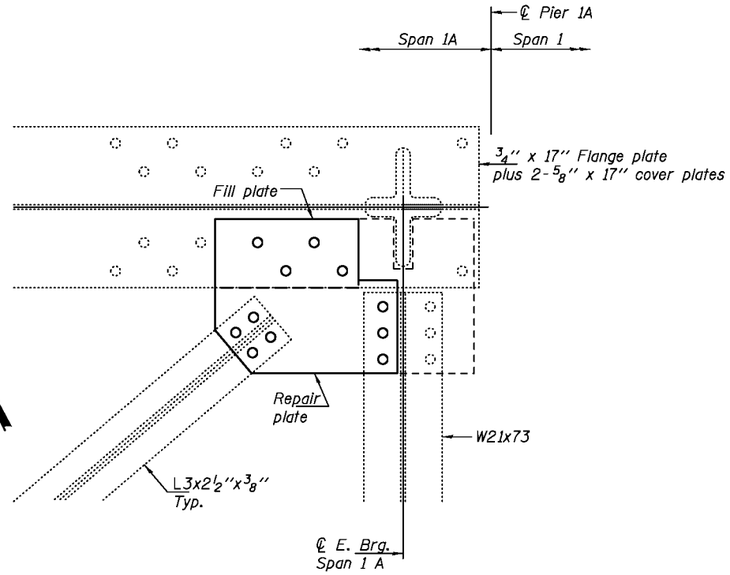
All structural steel shall be shop painted with the inorganic zinc rich primer per AASHTO M300, Type 1. Cost included with Structural Steel Repair.



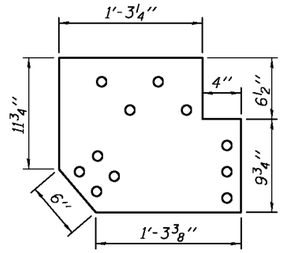
EXISTING PARTIAL PLAN

Hatched area indicates portion of existing connector plate to be removed from floorbeam and stringer. Crosshatched area indicates portion of existing connector plate to be removed from diagonals. Cost included with Structural Steel Repair.

Use holes in existing steel as a template for drilling holes in new steel.

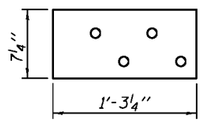


REPLACEMENT PARTIAL PLAN



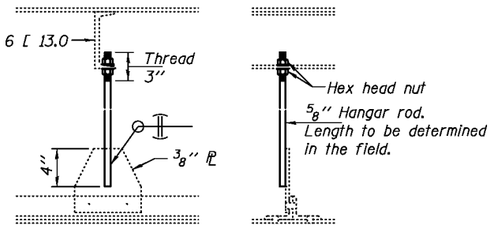
REPAIR PLATE

PL ½'' x 1'-4¼'' x 1'-7¼''



FILL PLATE

PL ¾'' x 7¼'' x 1'-3¼''



LATERAL BRACING HANGER REPAIR

Cost included with Structural Steel Repair.

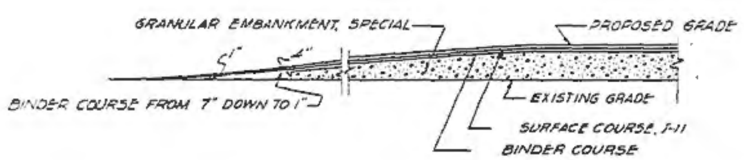
STATION 51+52.38 TO STATION 53+50



LONGITUDINAL SECTION — MAUCK LANE
FOR MEETING EXISTING PAVEMENT

THE NOMINAL THICKNESSES FOR SUB-BASE GRANULAR MATERIAL AND GRAVEL OR CRUSHED STONE SHOULDERS TYPE B; BASE AND SURFACE COURSES ARE SHOWN ON THE TYPICAL SECTIONS, STANDARDS, SCHEDULES OR SPECIAL DETAILS. THE CONSTRUCTED THICKNESSES OF THE ABOVE ITEMS SHALL NOT BE LESS THAN 90 PER CENT OF THE NOMINAL THICKNESS AT ANY LOCATION.

THE THICKNESS OF BITUMINOUS MIXTURE SHOWN ON THE PLANS IS THE NOMINAL THICKNESS. DEVIATIONS FROM THE NOMINAL THICKNESS WILL BE PERMITTED WHEN SUCH DEVIATIONS OCCUR DUE TO IRREGULARITIES IN THE EXISTING SURFACE OR BASE ON WHICH THE BITUMINOUS MIXTURE IS PLACED.

GENERAL NOTES - ROADWAY

All elevations shown are on United States Geological Survey Datum.

Grade elevations on Plan and Profile Sheets and On Cross Sections apply as follows:

1. Crossroad: Station 47 + 00 to Station 53 + 50; the center of the surfaced way.
2. Detour Road: Station 7+57.77 to Station 13 + 78.53; the center of the surfaced way.

A Bituminous Concrete Binder Course, shall be constructed 3 inches thick and variable, in accordance with the Typical Section shown, and as directed by the Engineer, on the Crossroad at F.A.I. Station 1742+16.65.

ESTIMATED QUANTITY:

108	Tons	BITUMINOUS CONCRETE BINDER COURSE
250	Gals.	BITUMINOUS MATERIALS (PRIME COAT)

A Bituminous Concrete Surface Course, Sub-Class 1-11, shall be constructed 1 1/2 inches thick, in accordance with the Typical Section shown, and as directed by the Engineer.

ESTIMATED QUANTITY:

60	Tons	BITUMINOUS CONCRETE SURFACE COURSE, SUB-CLASS 1-11

Granular Embankment, Special shall be placed over the existing pavement surface on Mauck Lane and shall be compacted to the elevations as shown on the Cross Sections and as directed by the Engineer.

ESTIMATED QUANTITY:

430	Tons	GRANULAR EMBANKMENT - SPECIAL

Gravel or Crushed Stone Shoulders, Type B, shall be built of Salvaged Aggregate in accordance with the Typical Sections shown in the plans and as directed by the Engineer.

ESTIMATED QUANTITY:

50	Cu.Yds.	GRAVEL OR CRUSHED STONE SHOULDERS, (SALVAGED AGGREGATE)

A Gravel or Crushed Stone Surface Course, Type A, shall be placed uniformly 6 inches thick, compacted, on the detour for Mauck Lane, Station 7 + 86 to Station 13 + 50, in accordance with the Typical Section shown.

ESTIMATED QUANTITY:

535	Tons	GRAVEL OR CRUSHED STONE SURFACE COURSE, TYPE A

Gravel or Crushed Stone for maintenance purposes and for raising the grade at the terminals of the Detour Road for Mauck Lane has been provided.

ESTIMATED QUANTITY:

200	Tons	GRAVEL OR CRUSHED STONE

Calcium Chloride shall be applied on the [illegible] 5 pounds per square yard and shall be mixed with the Gravel or Crushed Stone for maintenance as directed by the Engineer.

ESTIMATED QUANTITY:

4.6	Tons	CALCIUM CHLORIDE APPLIED

Where indicated on the cross sections and as may be directed by the Engineer, Top Soil, 4 inches thick shall be placed.

ESTIMATED QUANTITY:

75	Cu.Yds.	TOPSOIL

Shoulders, Ditches and any other areas between the Right of Way lines on Mauck Lane having insufficient cover or unsatisfactory vegetation shall be seeded as directed by the Engineer.

ESTIMATED QUANTITIES:

0.1	Acres	TEMPORARY SEEDING
0.1	Acres	COMPLETE SEEDING

On all areas to be seeded, Fertilizer Nutrients and Agricultural Ground Limestone shall be applied as directed by the Engineer.

ESTIMATED QUANTITIES:

0.1	Ton	FERTILIZER NUTRIENTS
1	Ton	AGRICULTURAL GROUND LIMESTONE

Earth Shoulders and all areas having a slope of 4:1, or steeper, shall be covered with asphalt-coated mulch as directed by the Engineer.

ESTIMATED QUANTITIES:

1	Ton	STRAW FOR ASPHALT-COATED MULCH
100	Gal.	EMULSIFIED ASPHALT

A strip of sod 36 inches wide shall be placed on each side of all paved ditches and paved ditch transitions as directed by the Engineer.

ESTIMATED QUANTITIES:

1000	Sq.Yds.	SODDING
6	Units	SUPPLEMENTAL WATERING

All trees that interfere with construction operations shall be removed as directed by the Engineer. For the Contractors convenience, the estimated Inch Diameters and Acres to be removed are shown below. (See Special Provisions)

ESTIMATED DIAMETERS & ACRES

270	In.Dia.	TREE REMOVAL (6" TO 15" DIA.)
330	In.Dia.	TREE REMOVAL (OVER 15" DIA.)
14.6	Acres	TREE REMOVAL (ACRES)

QUANTITY:

1	Lump Sum	TREE AND HEDGE REMOVAL

At locations indicated on the plans and as directed by the Engineer, Right of Way Markers shall be furnished and erected.

ESTIMATED QUANTITIES:

30	Each	FURNISHING AND ERECTING RIGHT OF WAY MARKERS

Existing pavement on Mauck Lane shall be removed as indicated on the plans and as directed by the Engineer.

ESTIMATED QUANTITY:

533	Sq.Yds.	PAVEMENT REMOVAL

Before ordering pipe culverts, corrugated metal pipe or storm sewers, the Contractor shall consult the Engineer for exact lengths.

[illegible] dard 2153-2, shall be erected at locations as shown on the plans.

Wherever in these plans reference is made to the "Standard Specifications", it is understood to include the "Supplemental Specifications", effective July 1, 1961

GENERAL NOTES - BRIDGES

SECTIONS 92-11HB-1 & 92-11B

Class X Concrete shall be used throughout.

Superstructure Slab shall be finished in accordance with Article 51.19 of the Standard Specifications.

Exposed Concrete surfaces shall be rubbed in accordance with Standard Specifications, Sec. 52-13.

SECTION 92-11HB-1

All Rollers, Rockers, Bearing Plates, Masonry Plates, Pintles, Anchor Bolts, Bolts and Nuts, Lead Plates, and all parts of Expansion Guards and Devices shall be fabricated and set in accordance with Article 51.13 and Article 51.15 of the Standard Specifications and are included for payment as "Furnishing and Erecting Structural Steel".

All surfaces of Structural Steel that will be exposed after erection shall receive one coat red lead paint and two field coats of Aluminum paint. All paint to be furnished and applied by the contractor and included in the unit price bid for "Furnishing and Erecting Structural Steel".

4" Concrete Slopewall shall be reinforced with welded Wire Fabric 6" x 6" Mesh, #4 Wires, Weighing 58# Per 100 Sq. ft.

Test Piles, the Contractor shall drive one test pile in a permanent location in the North Abutment before driving the remainder of the piles.

SECTION 92-11B

Coarse Aggregate used in Parapet Handrails and Wingwall End Posts must be absolutely free of Chert, Flint, Limonite, Lignite and soft Sandstone.

Anchor Bolts shall be set before riveting Cross Frames over Piers and Abutments.

Slope Wall shall be reinforced with welded Wire Fabric 6" x 6" Mesh, #4 Wires, weighing 58 Lbs. per 100 Sq. Ft. layout of the Slope Walls may be varied to suit ground conditions in the field, as directed by the Engineer.

Test Piles shall be driven in permanent locations after embankments are placed, before driving remainder of piles.

Piles in Abutments shall be driven in holes precored to natural ground in accordance with Article 60.9 (c) of the Standard Specifications.

SECTIONS 92-11B & 92-11F

All Rollers, Rockers, Bearing Plates, Masonry Plates, Pintles and Anchor Bolts shall be fabricated and set in accordance with Article 51.15 of the Standard Specifications and are included for payment as Structural Steel.

Expansion Guards shall be fabricated and erected in accordance with Article 51.13 (d) of the Standard Specifications. Expansion Plates shall be flame cut as provided in Article 54.5 of the Standard Specifications. Expansion Guards shall be given two shop coats of Red Lead Paint. The 3/4" x 8" welded Stud Anchors shall not be painted. Expansion Guards are included for payment as Structural Steel.

Except as otherwise provided, All Structural Steel shall receive one shop coat of red lead paint and two field coats of Aluminum paint. See Articles 56.1 to 56.5, inclusive, of the Standard Specifications.

All Paint shall be furnished and applied by the Contractor involved.

3/4" Rivets shall be used for all connections, except as noted.

SECTION 92-11F

All Holes for Splices shall be subpunched 11/16" and reamed to 13/16" for 3/4" Rivets, while Girders are assembled in shop in proper position and left assembled for shop inspection by Division of Highways.

Design Specifications: A.A.S.H.O. 1957 Edition
Design Load: H15-S12-44

Unit Stresses: Structural Steel	[illegible] p.s.i.
Reinforcing Steel	f_s = 20,000 p.s.i.
Concrete Ultimate compression	f'_c = 3,500 p.s.i.
Allowable compression (No Earth Pressure)	f_c = 1,400 p.s.i.
Allowable compression (With Earth Pressure)	f_c = 1,000 p.s.i.
Modular Ratio	n = 10
Horizontal Earth Pressure (Equiv. Liquid Pressure)	= 40 p/cf
Concrete Piles, Capacity	= 40 Tons @ Abutments
Pier Footing Shear	V = 75 p.s.i.
Allowable Soil Pressure - Piers	3 Tons/S.F. Max.

Design Specification: A.A.S.H.O. 1957 Edition

Design Load: H20-S16-44 & Alternative

Deck Slab, Piers, Footings and Abutments	
Structural Steel	f_s = 18,000 p.s.i.
Reinforcing Steel	f_s = 20,000 p.s.i.
Concrete	
Ultimate Compression	f'_c = 3,500 p.s.i.
Allowable Compression (No Earth Pressure)	f_c = 1,400 p.s.i.
Allowable Compression (With Earth Pressure)	f_c = 1,000 p.s.i.
Modular Ratio	n = 10
Horizontal Earth Pressure = Equiv. Fluid Pressure	= 40 p.c.f.
Concrete Pile Capacity	= 40 Tons @ Abutments
Timber Pile Capacity	= 15 Tons @ Approach Slab
Steel Pile Capacity	= 40 Tons @ Piers
Pier Footings, Max. Shear	= 75 p.s.i.

GENERAL NOTES

1950 CHICAGO BUILDING CODE SOIL CLASSIFICATIONS ARE USED.

- E : ELEVATION
- S : SAMPLE NUMBERS
- PR : PENETRATION IN BLOWS PER FOOT OF 140 POUNDS HAMMER FALLING 30 INCHES
- QU : UNCONFINED COMPRESSIVE STRENGTH-T/SQ.FT.
- R : RECOVERY IN FEET
- SS : SPLIT SPOON-SIZE: 2"O.D. SIZE: $1\frac{3}{8}$" I.D.
- M : MOIST
- D : DRY
- W : WET

*LOGS PREPARED BY
SOIL TESTING SERVICES, INC.
1827 N. HARLEM AVE.
CHICAGO 35, ILL.

WATER LEVELS INDICATED ON THE BORING LOGS ARE THE LEVELS MEASURED IN THE BORING AT THE TIMES INDICATED. IN PERVIOUS SOILS, THE INDICATED ELEVATIONS ARE CONSIDERED RELIABLE GROUND WATER LEVELS. IN IMPERVIOUS SOILS, THE ACCURATE DETERMINATION OF GROUND WATER ELEVATIONS IS NOT POSSIBLE IN EVEN SEVERAL DAYS OBSERVATION, AND ADDITIONAL EVIDENCE ON GROUND WATER ELEVATIONS MUST BE SOUGHT.

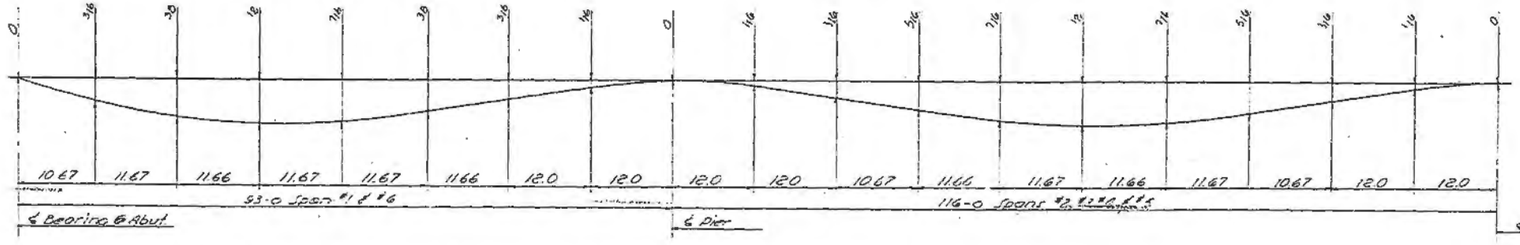
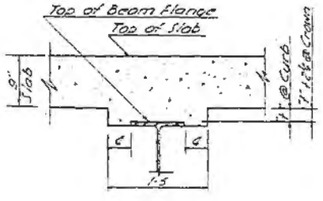
SUPERSTRUCTURE QUANTITIES		
Class X Concrete	1556.5	C.Yds.
Reinforcement Bars	522,510	lbs.

Note: Quantities shown are for both structures.

NOTE: For Parapet Handrail Details & Quantities see Sheet No. 42



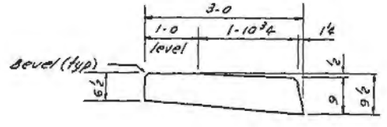
SLAB DEAD LOAD DEFLECTION



SECTION B-B

METHOD FOR DETERMINING FILLET HEIGHTS "T"

Elevation of the top flanges of each Floor Beam shall be taken after all Structural Steel has been erected. From these elevations subtract the increment of deflection for these points, determined from the Slab D.L. deflection diagram. The elevations so obtained subtracted from the theoretical grade elevations, minus 1'4" (Slab 8" & Crown 2½") equals the fillet height "T" at the curb. The fillet height @ ℄ Roadway equals "T" +2½" Crown.



DETAIL OF ⅛" ALUMINUM SHEETS
Used in curb joints (3003-H14)

NOTE: Aluminum Sheet Used in Curb shall be Included in Cost of Class X Concrete.

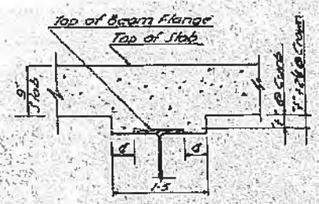
SLAB DEAD LOAD DEFLECTION



METHOD FOR DETERMINING FILLET HEIGHTS "T"

Elevation of the top flanges of each Floor Beam shall be taken after all structural steel has been erected. From these elevations subtract the increment of deflection for these points, determined from the slab D.L. deflection diagram. The elevations so obtained subtracted from the theoretical grade elevations, minus 11¼" (Slab 9" + Crown 2½") equals the fillet height "T" at the curb. The fillet height @ ℄ Roadway equals "T" + 2½" Crown.

NOTES:
All Posts shall be placed normal to parapet.
All Posts shall be of Aluminum conforming to A.S.T.M. Specification B-108 alloy 56-70B-T6.
All Rail Tubing shall be of Aluminum conforming to A.S.T.M. Specification B-235 alloy 65-11A-T6.
Alclad Washers shall be made from sheet conforming to A.S.T.M. Specification B-209 alloy clad 6061-T4.
Rail Tubing may be cut to 2 lengths maximum.
Set screws shall be of Aluminum conforming to A.S.T.M. Specification B-211 Alloy 6S-42A-T4.
For material composition of Prefabricated Pad see Art. 54.9(f) (Bearings & Anchorage of the Std. Specs.

NOTE: Parapet Wall Joint Materials cost incidental to Class X Concrete

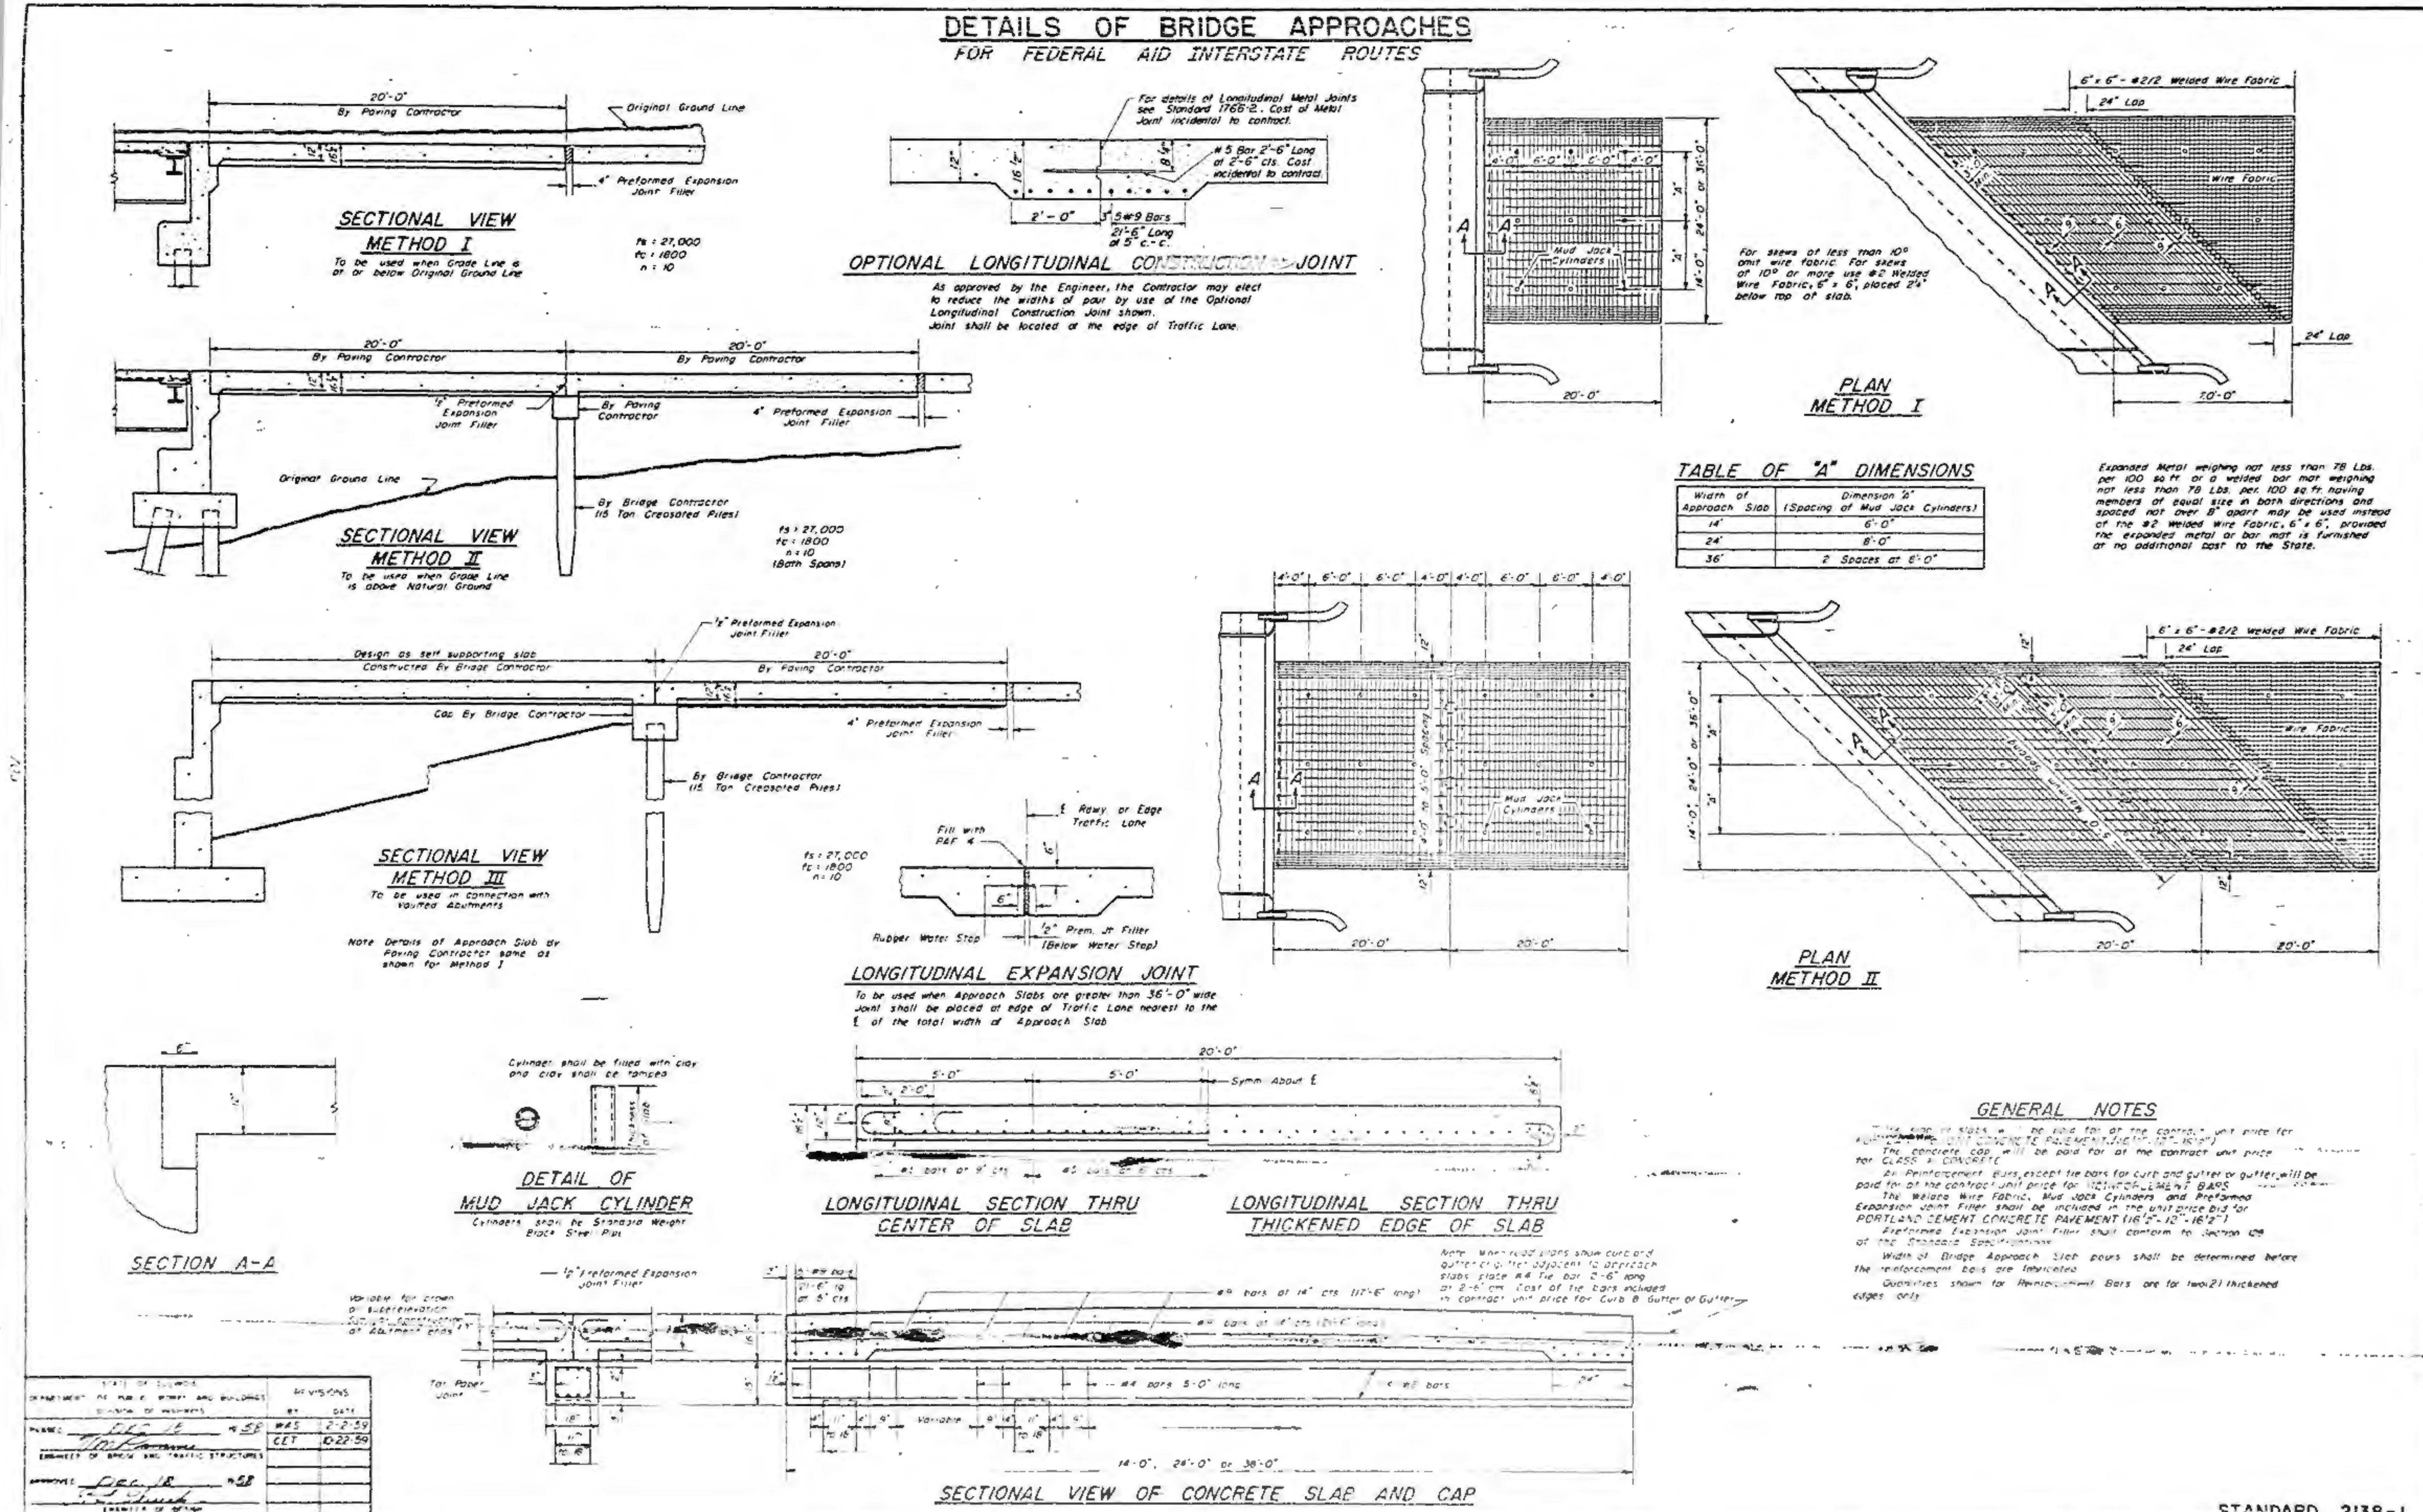
DETAILS OF BRIDGE APPROACHES

FOR FEDERAL AID INTERSTATE ROUTES



SECTIONAL VIEW
METHOD I
To be used when Grade Line is at or below Original Ground Line
20'-0"
By Paving Contractor
Original Ground Line
4" Preformed Expansion Joint Filler
fs = 27,000
fc = 1800
n = 10
SECTIONAL VIEW
METHOD II
To be used when Grade Line is above Natural Ground
By Paving Contractor
½" Preformed Expansion Joint Filler
By Paving Contractor
4" Preformed Expansion Joint Filler
By Bridge Contractor (15 Ton Creosoted Piles)
(Both Spans)
SECTIONAL VIEW
METHOD III
To be used in connection with Vaulted Abutments
Design as self supporting slab Constructed By Bridge Contractor
Cap By Bridge Contractor
Note: Details of Approach Slab by Paving Contractor same as shown for Method I
OPTIONAL LONGITUDINAL CONSTRUCTION JOINT
For details of Longitudinal Metal Joints see Standard 1766-2. Cost of Metal Joint incidental to contract.
#5 Bar 2'-6" Long at 2'-6" cts. Cost incidental to contract.
5#9 Bars
2'-6" Long at 5" c.-c.
As approved by the Engineer, the Contractor may elect to reduce the widths of pour by use of the Optional Longitudinal Construction Joint shown. Joint shall be located at the edge of Traffic Lane.
LONGITUDINAL EXPANSION JOINT
Fill with P&F 4
℄ Pavt. or Edge Traffic Lane
Rubber Water Stop
½" Prem. Jt Filler (Below Water Stop)
To be used when Approach Slabs are greater than 36'-0" wide. Joint shall be placed at edge of Traffic Lane nearest to the ℄ of the total width of Approach Slab
PLAN
METHOD I
For skews of less than 10° omit wire fabric. For skews of 10° or more use #2 Welded Wire Fabric, 6" x 6", placed 2½" below top of slab.
6" x 6" - #2/2 Welded Wire Fabric
24" Lap
Wire Fabric
Mud Jack Cylinders
PLAN
METHOD II
Expanded Metal weighing not less than 78 Lbs. per 100 sq ft or a welded bar mat weighing not less than 78 Lbs. per 100 sq ft having members of equal size in both directions and spaced not over 8" apart may be used instead of the #2 Welded Wire Fabric, 6" x 6", provided the expanded metal or bar mat is furnished at no additional cost to the State.
SECTION A-A
DETAIL OF
MUD JACK CYLINDER
Cylinder shall be filled with clay and clay shall be tamped
Cylinders shall be Standard Weight Black Steel Pipe

REVISIONS

TABLE OF "A" DIMENSIONS

Width of Approach Slab	Dimension "A" (Spacing of Mud Jack Cylinders)
14'	6'-0"
24'	8'-0"
36'	2 Spaces at 6'-0"

GENERAL NOTES

The concrete cap will be paid for at the contract unit price for CLASS X CONCRETE.

Reinforcement Bars, except tie bars for curb and gutter or gutter, will be paid for at the contract unit price for REINFORCEMENT BARS.

The Welded Wire Fabric, Mud Jack Cylinders and Preformed Expansion Joint Filler shall be included in the unit price bid for PORTLAND CEMENT CONCRETE PAVEMENT (16'2"-12"-16'2").

Preformed Expansion Joint Filler shall conform to Section 129 of the Standard Specifications.

Width of Bridge Approach Slab pours shall be determined before the reinforcement bars are fabricated.

Quantities shown for Reinforcement Bars are for two (2) thickened edges only.

GENERAL NOTES

G.N.-105.09
ALL ELEVATIONS SHOWN IN THE PLANS ARE BASED ON U.S.G.S. MEAN SEA LEVEL DATUM.

G.N.-107.09-A
THE VERTICAL CLEARANCE SHALL NOT BE REDUCED WHEN PROTECTING TRAFFIC FROM FALLING OBJECTS AND/OR MATERIALS.

G.N.-107.19-A
WHERE SECTION OR SUB SECTION MARKERS ARE ENCOUNTERED, THE ENGINEER SHALL BE NOTIFIED BEFORE SUCH MONUMENTS ARE REMOVED. THE CONTRACTOR SHALL PROTECT AND CAREFULLY PRESERVE ALL PROPERTY MARKERS AND MONUMENTS UNTIL THE OWNER, AN AUTHORIZED AGENT OR LAND SURVEYOR HAS WITNESSED OR OTHERWISE REFERENCED THEIR LOCATIONS.

G.N.-107.26-A
THE FOLLOWING IS A LIST OF UTILITY COMPANIES THAT HAVE UTILITIES LOCATED ALONG THIS SECTION.
THE UTILITY OWNERS MARKED WITH AN "*" BELONG TO J.U.L.I.E.

INTERSTATE WATER COMPANY
ILLINOIS POWER COMPANY

G.N. 107.26 B
EXISTING STATE-OWNED AND MAINTAINED UTILITY LINES ARE SHOWN ON THE PLANS TO INDICATE THEIR PRESENCE AND APPROXIMATE LOCATION. THE CONTRACTOR SHALL NOTIFY THE DISTRICT ENGINEER OF TRAFFIC TWO WEEKS PRIOR TO COMMENCING ANY EXCAVATION OR BORINGS IN THE VICINITY OF THESE LINES. THE STATE WILL THEN LOCATE AND MARK THE HORIZONTAL LOCATIONS OF THE LINES AND PROVIDE ANY AVAILABLE INFORMATION AS TO THEIR DEPTH. SHOULD ANY OF THE LINES BE DAMAGED BY THE CONTRACTOR'S OPERATION, THE CONTRACTOR SHALL REPAIR THEM TO THE SATISFACTION OF THE ENGINEER AND AT NO COST TO THE STATE.

G.N. 207-A
BENCHING PROCEDURES SHALL BE USED IN AREAS WHERE EXISTING EMBANKMENTS ARE WIDENED FOR THE PROPOSED PAVEMENT. STEPS SHALL BE CUT INTO THE EXISTING EMBANKMENT SLOPES AND SHALL HAVE THE FOLLOWING DIMENSIONS:
HORIZONTAL: 3.0 FEET (MINIMUM)
VERTICAL: 1 1/2 FEET

G.N.-406-A
THE QUANTITIES INCLUDED IN THE PLANS FOR BITUMINOUS CONCRETE RESURFACING ARE INTENDED TO GIVE THE COVERAGE SHOWN ON THE TYPICAL CROSS SECTIONS. IT IS NOT INTENDED TO INCREASE THE THICKNESS OF THE BITUMINOUS MIXTURE IN ORDER TO USE ALL OF THE QUANTITIES INCLUDED IN THE CONTRACT. DESIGN THICKNESSES CAN BE BACK CALCULATED USING THE CONVERSION FACTOR OF 1" THICKNESS = 112 POUNDS/SQUARE YARD.

G.N.-406-B
THE TOTAL AREA TO BE RESURFACED IS 121,226 SQ.YDS. OF WHICH 5,781 SQ.YDS. ARE VARIABLE WIDTH.
ESTIMATED QUANTITIES:

18,485	GALLONS	BITUMINOUS MATERIALS (PRIME COAT)
370	TONS	AGGREGATE (PRIME COAT)
15,640	TONS	BITUMINOUS CONCRETE BINDER COURSE, MIXTURE B, TYPE 1
10,690	TONS	BITUMINOUS CONCRETE SURFACE COURSE, MIXTURE D, CLASS I, TYPE 1

G.N.-406-D
PAVEMENT CLEANING SHALL BE PERFORMED ON THIS JOB TO REMOVE ANY LOOSE MATERIAL FROM SPALLED AREAS ON THE PAVEMENT AS DIRECTED BY THE ENGINEER. CLEANING OF THE AREA SHALL CONSIST OF THE APPLICATION OF COMPRESSED AIR, HAND PICK, AND BACKHOE TOOTH AS DIRECTED BY THE ENGINEER.

IMMEDIATELY AFTER CLEANING, THE SPALLED AREA SHALL BE HAND PRIMED WITH MATERIAL AS SPECIFIED IN ARTICLE 406.02 OF THE STANDARD SPECIFICATIONS. AFTER PRIMING, THE AREA SHALL BE FILLED WITH BITUMINOUS CONCRETE MEETING THE REQUIREMENTS OF ARTICLE 406.12 FOR SURFACE MIXTURE C. THE METHOD OF COMPACTION SHALL BE AS DIRECTED BY THE ENGINEER.

ALL LABOR, EQUIPMENT AND MATERIALS TO COMPLETE THE PAVEMENT CLEANING AND SUBSEQUENT POTHOLE FILLING AS DIRECTED BY THE ENGINEER WILL BE PAID FOR IN ACCORDANCE WITH ARTICLE 109.04.

G.N.-511-A
BEFORE ORDERING PIPE CULVERTS AND PIPE DRAINS, THE CONTRACTOR SHALL CONSULT THE ENGINEER FOR THE EXACT LENGTHS.

G.N.-601-A
THE RIPRAP GRADATION FOR R.R.3 SHALL BE IN ACCORDANCE WITH THE GRADATION SPECIFIED IN THE PLANS OR, WITH APPROVAL OF THE ENGINEER, A RIPRAP GRADATION MEETING A D50 GREATER THAN OR EQUAL TO 0.3 FEET. D50 IS DEFINED AS THE MEAN ROCK SIZE AS DESCRIBED IN THE FHWA HYDRAULIC ENGINEERING CIRCULARS (HEC 11, HEC 14 AND HEC 15).

G.N.-601-A
THE RIPRAP GRADATION FOR R.R.2 SHALL BE IN ACCORDANCE WITH THE GRADATION SPECIFIED IN THE PLANS OR, WITH APPROVAL OF THE ENGINEER, A RIPRAP GRADATION MEETING A D50 GREATER THAN OR EQUAL TO 0.16 FEET. D50 IS DEFINED AS THE MEAN ROCK SIZE AS DESCRIBED IN THE FHWA HYDRAULIC ENGINEERING CIRCULARS (HEC 11, HEC 14 AND HEC 15).

G.N.-603-A
BEFORE ORDERING STORM SEWERS, THE CONTRACTOR SHALL CONSULT THE ENGINEER FOR THE EXACT LENGTHS.

G.N.-617-A
WHERE PROPOSED CONSTRUCTION ABUTS EXISTING APPURTENANCES, A SAW CUT SHALL BE MADE TO ACHIEVE A NEAT BUTT JOINT. SAW CUTS WILL NOT BE PAID FOR SEPARATELY. COST OF SAW CUTS SHALL BE INCLUDED IN THE TYPE WORK ENCOUNTERED.

G.N. 620-B
CLASS C PATCHES
WHERE ESTIMATED PATCHES ARE OVER 20 FEET LONG, THE EXPANSION TIE ANCHORS REQUIRED BY STANDARD 2426 SHALL BE INCLUDED IN THE PAYMENT FOR THE PATCHES. WHERE ADDITIONAL PATCHES OVER 20 FEET IN LENGTH ARE CONSTRUCTED OR WHERE ESTIMATED PATCHES "GROW" FROM LESS THAN 20 FEET TO MORE THAN 20 FEET, THE EXPANSION TIE ANCHORS WILL BE PAID FOR IN ACCORDANCE WITH ARTICLE 109.04 OF THE STANDARD SPECIFICATIONS.

PATCHES WHICH WILL REQUIRE TIE BARS (PATCHES IN BOTH LANES)

NUMBER	LENGTH
3	20'
2	30'
1	50'
1	60'

PATCHES WHICH WILL REQUIRE ANCHORS

NUMBER	LENGTH
1	40'
1	60'

CLASS D PATCHES, TYPE II, 10 INCH
THIS WORK SHALL BE PERFORMED IN ACCORDANCE WITH SECTION 620 OF THE STANDARD SPECIFICATIONS AND STANDARD 2427 IN ORDER TO PROVIDE EXPANSION FOR THE EXISTING CONCRETE PAVEMENT. THE PATCHES SHALL BE CONSTRUCTED IN HALF WIDTHS, 4 FEET IN LENGTH, FULL WIDTH OF THE PAVEMENT, APPROXIMATELY 1,000 FEET APART AS DESIGNED BY THE ENGINEER.

THIS WORK WILL BE PAID FOR AT THE CONTRACT UNIT PRICE PER SQUARE YARD FOR CLASS D PATCHES, TYPE II, 10 INCH WHICH WILL BE PAYMENT IN FULL TO COMPLETE THE WORK AS SPECIFIED.

ESTIMATED QUANTITY
427 SQ.YD. CLASS D PATCHES, TYPE II, 10"

CLASS C PATCHES SHALL BE USED THROUGHOUT THIS SECTION EXCEPT FOR THE EXPANSION PATCHES. THERE ARE 6 TYPE I PATCHES, 107 TYPE II PATCHES AND 28 TYPE III PATCHES.

ESTIMATED QUANTITIES

27	SQ.YD.	CLASS C PATCHING, TYPE I, 10"
1,058	SQ.YD.	CLASS C PATCHING, TYPE II, 10"
910	SQ.YD.	CLASS C PATCHING, TYPE III, 10"

G.N.-628-A
GUARD RAIL DESIGN IN THESE PLANS WERE BASED ON THE FOLLOWING INFORMATION:
CLEAR ZONE WIDTH = 38-46' (FROM EDGE OF PAVEMENT).
OPERATING SPEED = 60 M.P.H. (POSTED SPEED LIMIT).
A.D.T. = 15,820 (1996).

G.N.-642-A
SHOULDERS, DITCHES, FORE-SLOPES, BACK-SLOPES AND OTHER PORTIONS OF THE RIGHT-OF-WAY HAVING INSUFFICIENT VEGETATION SHALL BE SEEDED AS LISTED ELSEWHERE IN THE PLANS.

G.N.-642-B
THE FOLLOWING APPLICATION RATES HAVE BEEN USED TO CALCULATE THE VARIOUS ITEMS NECESSARY FOR SEEDING:

FERTILIZER NUTRIENTS	CLASS 1, 2 & 2 SPECIAL SEEDING
NITROGEN	60 LBS. PER ACRE
PHOSPHORUS	200 LBS. PER ACRE
POTASSIUM	60 LBS. PER ACRE

G.N.-642-C
SEEDING DATES FOR ALL CLASSES OF SEEDING WILL BE AS LISTED BELOW:

CLASS OF SEEDING	BEGINNING DATES	TERMINATION DATES
1, 1A, 2, 2 SPECIAL, 2A, 3, 6, 6A (IN SPRING)	APRIL 1	MAY 15
1, 1A, 2, 2 SPECIAL, 2A, 3, 6, 6A (IN FALL)	AUGUST 15	OCTOBER 15
4 & 5 & 7		REFER TO ARTICLE 642.06

G.N.-643-A
ALL AREAS DISTURBED BY CONSTRUCTION OPERATIONS THAT ARE TO BE SEEDED SHALL ALSO BE MULCHED. THIS WORK SHALL CONFORM TO THE REQUIREMENTS OF SECTION 643 OF THE STANDARD SPECIFICATIONS FOR ROAD AND BRIDGE CONSTRUCTION EXCEPT THAT THE CONTRACTOR WILL HAVE THE OPTION OF USING EITHER METHODS 2, 3, 4, 5, 6 OR 7 FOR PLACING THE MULCH. MULCH METHOD 1 SHALL NOT BE ALLOWED. MULCH WILL BE MEASURED IN ACRES OF SURFACE AREA MULCHED. THE EMULSIFIED ASPHALT USED IN METHOD 2, THE APPLICATION AND MATERIAL OF THE HYDRAULIC MULCH USED IN METHOD 5, THE CHEMICAL MULCH BINDER USED IN METHOD 6, OR THE WOOD OR PAPER FIBER HYDRAULIC MULCH USED IN METHOD 7 WILL NOT BE PAID FOR SEPARATELY BUT SHALL BE CONSIDERED INCLUDED IN THE CONTRACT UNIT PRICE PER ACRE FOR MULCH AND NO ADDITIONAL COMPENSATION WILL BE ALLOWED.

WHEN THE WORK IS CONSTRUCTED ESSENTIALLY TO THE LINES, GRADES OR DIMENSIONS SHOWN ON THE PLANS AND THE CONTRACTOR AND THE ENGINEER HAVE AGREED IN WRITING THAT THE PLAN QUANTITIES FOR MULCH ARE ACCURATE, NO FURTHER MEASUREMENT WILL BE REQUIRED AND PAYMENT WILL BE MADE FOR THE QUANTITY SHOWN IN THE CONTRACT EXCEPT THAT IF ERRORS ARE DISCOVERED AFTER WORK HAS BEEN STARTED, APPROPRIATE ADJUSTMENTS WILL BE MADE.

WHEN THE PLANS HAVE BEEN ALTERED OR WHEN DISAGREEMENT EXISTS BETWEEN THE CONTRACTOR AND THE ENGINEER AS TO THE ACCURACY OF THE PLAN QUANTITY, EITHER PARTY SHALL, BEFORE ANY WORK IS STARTED WHICH WOULD AFFECT THE MEASUREMENT, HAVE THE RIGHT TO REQUEST IN WRITING AND THEREBY CAUSE THE QUANTITY INVOLVED TO BE MEASURED AS SPECIFIED.

THIS WORK WILL BE PAID FOR AT THE CONTRACT UNIT PRICE PER ACRE FOR MULCH MEASURED AS SPECIFIED HEREIN.

G.N.-643-B
THE APPLICATION RATE FOR STRAW IN MULCH, METHODS 1, 2, 3, 5, OR 6 SHALL BE 2 TONS PER ACRE.

G.N.-647-C
TEMPORARY PAVEMENT MARKING SHALL BE APPLIED TO THE PAVEMENT AFTER PLACING BITUMINOUS MATERIALS (PRIME COAT), (LEVEL) BINDER AND SURFACE. THE PRIME COAT AND (LEVEL) BINDER SHALL HAVE THE TEMPORARY PAVEMENT MARKING PLACED TO DELINEATE 2 LANES. THE SURFACE SHALL HAVE THE TEMPORARY PAVEMENT MARKING PLACED TO COINCIDE WITH THE FINAL STRIPING. USE 4 FEET PER 40 FEET (OR 100 PER STATION).
ESTIMATED QUANTITY:
14,298 LIN.FT. TEMPORARY PAVEMENT MARKING
(1,388 LIN.FT. YELLOW & 12,910 LIN.FT. WHITE)

G.N.-704.01
COARSE AGGREGATE GRADATION CA-10 MAY BE USED WHENEVER COARSE AGGREGATE CA-6 IS SPECIFIED IN THE STANDARD SPECIFICATIONS.

G.N.-T-500-A
FOR THE FINAL SURFACE, ONLY THE MATERIAL AND LAYOUT SCHEME SHOWN FOR THE PERMANENT PAVEMENT MARKING WILL BE ALLOWED FOR THE STANDARD MARKINGS. SHORT TERM MARKINGS SHALL BE AS SPECIFIED ELSEWHERE HEREIN.

G.N.-T501-A
THERMOPLASTIC PAVEMENT MARKINGS SHALL BE APPLIED TO THE FINAL PAVEMENT SURFACE.
ESTIMATED QUANTITIES:
YELLOW:
46,375 LIN.FT. THERMOPLASTIC PAVEMENT MARKING - LINE 4"

WHITE:
60,120 LIN.FT. THERMOPLASTIC PAVEMENT MARKING - LINE 4"
800 LIN.FT. THERMOPLASTIC PAVEMENT MARKING - LINE 8"

TOTALS:
106,495 LIN.FT. THERMOPLASTIC PAVEMENT MARKING - LINE 4"
800 LIN.FT. THERMOPLASTIC PAVEMENT MARKING - LINE 8"

G.N.-T-502-C
THE FOLLOWING QUANTITIES ARE ALLOWED FOR PLACING STANDARD PAVEMENT MARKINGS, IN ACCORDANCE WITH THE SPECIAL PROVISION ENTITLED 'SECTION 647, SHORT-TERM PAVEMENT MARKING AND NO-PASSING ZONE SIGNING,' ON THE MILLED SURFACE OR INTERMEDIATE LIFTS AND TO DELINEATE NO-PASSING ZONES DURING CONSTRUCTION. QUANTITIES FOR THE FINAL PAVEMENT MARKING ARE INCLUDED ELSEWHERE HEREIN.

ESTIMATED QUANTITIES:
YELLOW:
92,750 LIN.FT. PAINT PAVEMENT MARKING - LINE 4"

WHITE:
120,240 LIN.FT. PAINT PAVEMENT MARKING - LINE 4"

TOTALS:
212,990 LIN.FT. PAINT PAVEMENT MARKING - LINE 4"

BENCH MARK: PERMANENT SURVEY MARKER, TYPE II
STATION 1742 + 40, TOP OF BRASS PLUG, ELEV. 625.41

EXISTING STRUCTURE:
STRUCTURE NOS. 092-0006 & 092-0007 WERE BUILT IN 1964 AS FAI 74, SECTION 92-11B, 11F. REPAIRS PERFORMED IN 1977 INCLUDED DECK PATCHING, EXPANSION DEVICE RECONSTRUCTION, INSTALLATION OF WATERPROOFING MEMBRANE SYSTEM AND BITUMINOUS OVERLAY. EACH STRUCTURE CONSISTS OF ONE SINGLE 93' SPAN AND SIX CONTINUOUS SPANS (93', 4 @ 116', 93') OF TWO STEEL PLATE GIRDERS WITH STEEL FLOORBEAMS AND REINFORCED CONCRETE DECK SUPERSTRUCTURE WITH DOUBLE COLUMN PIERS AND VAULTED ABUTMENTS. OVERALL LENGTH IS 750'-2" AND CLEAR ROADWAY WIDTH IS 30'-0". TRAFFIC TO BE MAINTAINED BY BUILDING CROSS-OVERS & WORKING ON ONE STRUCTURE AT A TIME. HANDRAIL TO BE SALVAGED. BRIDGE CONTRACTOR TO STOCKPILE ON STATE ROW FOR REMOVAL BY DISTRICT MAINTENANCE FORCES. SALVAGE NAME PLATE AND INCORPORATE INTO NEW CONSTRUCTION.

LOCATION SKETCH

GENERAL NOTES

1. FASTENERS SHALL BE HIGH STRENGTH BOLTS 3/4"ø, OPEN HOLES 13/16"ø, UNLESS OTHERWISE NOTED.
2. CALCULATED WEIGHT OF STRUCTURAL STEEL = 125,000 LBS.
3. THE FIRST TWO COATS OF THE LEAD AND CHROMATE FREE ALKYD PAINT SYSTEM SHALL BE USED FOR SHOP AND FIELD PAINTING OF NEW STRUCTURAL STEEL.
   Prior to pouring the new concrete for the deck, all loose rust, loose mill scale, and all other foreign material shall be removed from the embedded portions of flanges of stringers. The removal shall be accomplished in accordance with the requirements of the SSPC Surface Preparation Specifications SP-11 for Power tool cleaning or SP-2 for Hand tool cleaning. Cost shall be incidental to concrete removal.
5. ALL CONTACT SURFACES OF NEW AND EXISTING STRUCTURAL STEEL SHALL BE FREE OF PAINT OR LACQUER.
6. FIELD WELDING OF CONSTRUCTION ACCESSORIES WILL NOT BE PERMITTED TO THE BOTTOM FLANGE OF FLOORBEAMS OR GIRDERS AT ANY LOCATION, NOR TO THE TOP FLANGE FOR A DISTANCE EQUAL TO ONE-FOURTH THE SPAN LENGTH EACH WAY FROM SUPPORTS, NOR TO THE TOP FLANGE OF FLOORBEAM CANTILEVERS. FIELD WELDING IN OTHER AREAS WILL BE PERMITTED ONLY WHEN APPROVED BY THE ENGINEER.
7. NEW ANCHOR BOLTS SHALL BE INSTALLED PRIOR TO REPAIRING CROSS FRAMES OVER SUPPORTS.
8. REINFORCEMENT BARS SHALL CONFORM TO THE REQUIREMENTS OF AASHTO M-31, M-42 OR M-53 GRADE 60.
9. LAYOUT OF SLOPE PROTECTION SYSTEM MAY BE VARIED IN THE FIELD TO SUIT GROUND CONDITIONS AS DIRECTED BY THE ENGINEER.
10. PLAN DIMENSIONS AND DETAILS RELATIVE TO EXISTING STRUCTURE HAVE BEEN TAKEN FROM EXISTING PLANS AND ARE SUBJECT TO NOMINAL CONSTRUCTION VARIATIONS. IT SHALL BE THE CONTRACTOR'S RESPONSIBILITY TO VERIFY SUCH DIMENSIONS AND DETAILS IN THE FIELD AND MAKE NECESSARY APPROVED ADJUSTMENTS PRIOR TO CONSTRUCTION OR ORDERING OF MATERIALS. SUCH VARIATIONS SHALL NOT BE CAUSE FOR ADDITIONAL COMPENSATION FOR A CHANGE IN THE SCOPE OF THE WORK; HOWEVER, THE CONTRACTOR WILL BE PAID FOR THE QUANTITY ACTUALLY FURNISHED AT THE UNIT PRICE BID FOR THE WORK.
12. THE CONTRACTOR WILL BE REQUIRED TO MARK ON TOP OF THE CONCRETE DECK THE LOCATIONS OF THE TOP FLANGE OF ALL STEEL FLOORBEAMS, PRIOR TO ANY REMOVAL OF THE BRIDGE DECK. SAW CUTTING DIRECTLY OVER THE TOP OF FLOORBEAM FLANGES IS NOT PERMITTED.
13. THE BEARING SEATS AT THE ABUTMENTS AND AT PIERS 1A SHALL HAVE BRIDGE SEAT SEALER APPLIED IN ACCORDANCE WITH THE SPECIAL PROVISIONS.
14. STRUCTURAL STEEL SHALL ONLY BE CLEANED AND PAINTED AS REQUIRED BY THE SPECIAL PROVISIONS "CLEANING AND PAINTING NEW STEEL AND ADJACENT AREAS OF EXISTING STEEL STRUCTURES".

APPROVED
FOR STRUCTURAL ADEQUACY ONLY

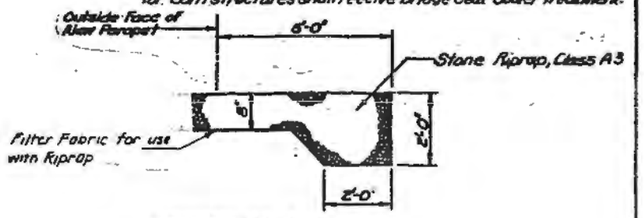
JACK EXIST. STRUCTURE NO. 1	L.SUM	1	-	1
JACK EXIST. STRUCTURE NO. 2	L.SUM	1	-	1

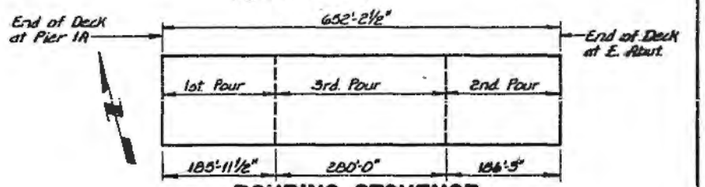
* Quantity includes top and inside faces of parapets only.

** CALCULATED AREA OF BRIDGE SEAT SEALER = 297.98 SQ. FT.

*** All top surfaces of the Abutment seats and Pier 1 seats for both structures shall receive Bridge Seat Sealer treatment.



SECTION A-A
(Typ. @ 4 Locations)



POURING SEQUENCE
(Typ. Ea. Structure)

WHEN THE DECK POUR IS STOPPED FOR THE DAY AT ONE OR MORE OF THE TRANSVERSE BONDED CONSTRUCTION JOINTS IN THE DECK POURING SEQUENCE AS SHOWN, THE NEXT POUR SHALL NOT BE MADE UNTIL BOTH OF THE FOLLOWING REQUIREMENTS ARE MET:

1. AT LEAST 72 HOURS SHALL HAVE ELAPSED FROM THE END OF THE PREVIOUS POUR.
2. THE CONCRETE STRENGTH SHALL HAVE ATTAINED A MINIMUM MODULUS OF RUPTURE OF 650 P.S.I. OR A MINIMUM COMPRESSIVE STRENGTH OF 3500 P.S.I.

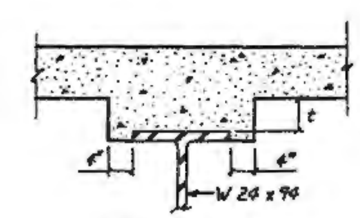
CROSS SECTION



SECTION A-A

TO DETERMINE "t"

AFTER ALL STRUCTURAL STEEL HAS BEEN ERECTED, ELEVATIONS OF THE TOP FLANGE OF EACH FLOORBEAM SHALL BE TAKEN AT INTERVALS SHOWN ABOVE. THESE ELEVATIONS SUBTRACTED FROM THE "THEORETICAL GRADE ELEVATIONS ADJUSTED FOR DEAD LOAD DEFLECTION" SHOWN ON DWG'S 7 & 8 MINUS SLAB THICKNESS, EQUALS THE FILLET HEIGHTS "t" ABOVE TOP FLANGE OF BEAMS.

INSTALLATION NOTES

Use anchor blocks and continuous seal as anchor bolt location templates.

1. Install sponge mandrels into positions shown to form flap convolution.
2. Install parapet or sidewalk piece (trim roadway flap to fit before applying epoxy).
3. Install continuous seal in roadway.
4. Install anchor blocks as indicated.

NOTE A... Maximum spacing of anchor bolts shall be 12" centers.

SKEW LIMITATIONS

The details of the anchor blocks and the elastomeric membrane in the parapet, as shown, are for up to 50° skews.

For skews greater than 50°, the anchor blocks and the elastomeric membrane, installed in accordance with dimension "D", might require modifications to insure a minimum clearance of 1½" from centerline of anchor studs to edge of parapet opening. The anchor blocks and the elastomeric membrane shall also be installed to the top of the parapet with the anchor studs spaced at 1'-0" cts.

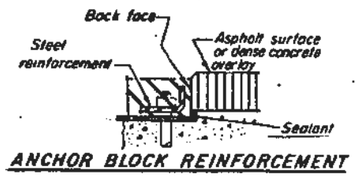
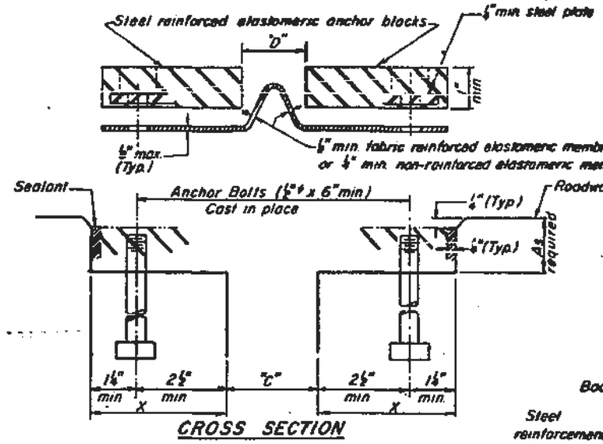
TYPICAL END TREATMENTS



ANCHOR BLOCK REINFORCEMENT with ASPHALT SURFACE OR DENSE CONCRETE OVERLAY



CROSS SECTION

GENERAL NOTES

Continuous Seal Neoprene Expansion Joint shall consist of molded anchor blocks of elastomer and steel, field assembled over continuous lengths of elastomeric membrane. See Special Provisions.

The elastomeric membrane shall be premolded with a single or a double upward convolution that will have a "memory" to return to its molded position upon joint closure.

The steel reinforcement must extend up the back face of anchor blocks when asphalt surfaces are used but is optional in concrete blockout.

The convolution length shall be such that the extended length will not be greater than the manufactured length when the joint is fully expanded in its design range and will not protrude above the anchor blocks when the joint is fully compressed.

Joint openings shall be adjusted in accordance with Article 503.07(c) of the Standard Specifications when the deck is poured at an ambient temperature other than 50° F.

The parapet and sidewalk flaps may be furnished factory vulcanized to the roadway membrane provided the centerline of the convolution is maintained and the process and method meet the approval of the Engineer.

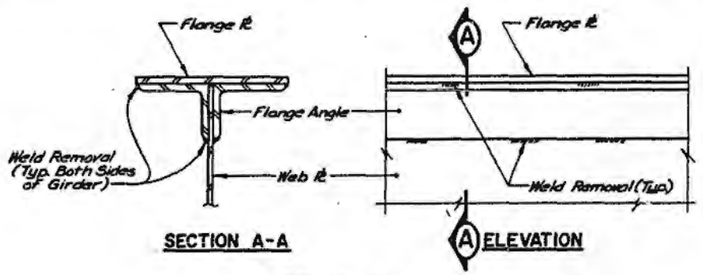
HANGER ROD TIGHTENING PROCEDURE

1. Loosen Bottom Nut.
2. Tighten Top Nut per Directions of the Engineer.
3. Tighten Bottom Nut.

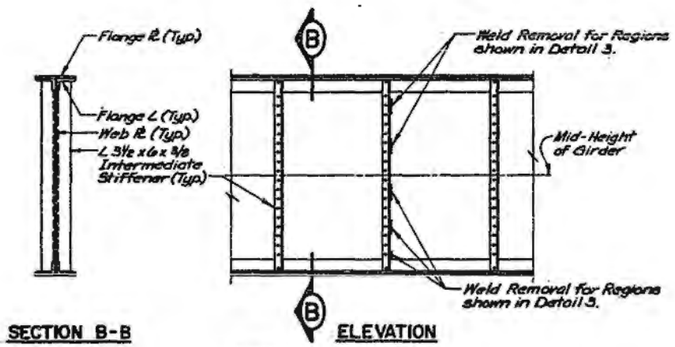
DETAIL 1

(Typ. as shown @ 20 locations each bridge; @ 12 add'l locations each bridge, detail is similar except no Top Lateral Bracing Gusset PL's exist. At these locations, remove any fillet welds between C6 & Bottom Flange of Floorbeam)



DETAIL 2

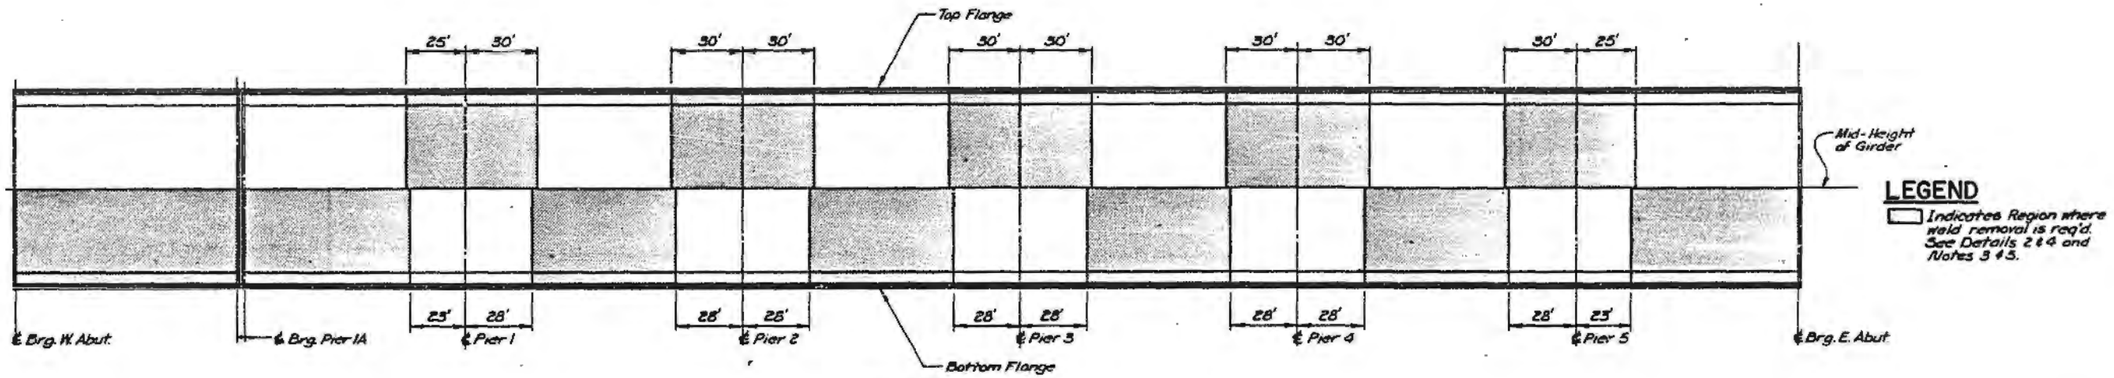
(Top Flange Shown; Bottom Flange Similar)



DETAIL 4

STRUCTURAL STEEL REPAIR NOTES

1. CHECK ALL HANGER ROD ASSEMBLIES FOR BOTTOM LATERAL BRACING SYSTEM, AND TIGHTEN PER THE DIRECTIONS OF THE ENGINEER. SEE DETAIL 1 THIS DRAWING AND SPECIAL PROVISIONS.
2. REMOVE ALL FILLET WELDS BETWEEN HANGER ROD ASSEMBLIES AND BOTTOM FLANGE OF FLOOR BEAMS. SEE DETAIL 1 THIS DRAWING AND SPECIAL PROVISIONS.
3. REMOVE TACK WELDS BETWEEN GIRDER WEB PLATES AND FLANGE ANGLES AND BETWEEN GIRDER FLANGE ANGLES AND FLANGE PLATES. SEE DETAILS 2 & 3 AND SPECIAL PROVISIONS.
4. REPLACE BROKEN, LOOSE, AND MISSING BOLTS AT LOCATIONS SHOWN ON DWGS. 19 & 20 AND AS DIRECTED BY THE ENGINEER. TYPES OF CONNECTIONS WHERE BOLT REPLACEMENT IS REQUIRED ARE:
   a) FLOORBEAM TO GIRDER CONNECTIONS (7/8"ø).
   b) GIRDER FLANGE TO WEB CONNECTIONS AT SPLICES (3/4"ø).
   c) LATERAL BRACING CONNECTIONS (3/4"ø).
   d) CROSS FRAME CONNECTIONS (3/4"ø).
5. REMOVE TACK WELDS BETWEEN GIRDER WEB AND STIFFENERS AT LOCATIONS SHOWN ON DETAILS 3 & 4 AND AS DIRECTED BY THE ENGINEER. SEE SPECIAL PROVISIONS.
6. RAISE EXISTING STRUCTURE AND PROVIDE NEW BEARINGS. SEE DWG. NO. 22.
7. PROVIDE NEW FLOORBEAMS AT LOCATIONS INDICATED ON DWG. NOS. 19 & 20, AND AS DIRECTED BY THE ENGINEER.



ELEVATION

TABLE OF ELEVATIONS* — TOP OF STEEL FLOORBEAMS

LOCATION	ELEVATION
W. Abuts.	611.824
Piers 1A, Span 1A	609.498
Piers 1A, Span 1	609.451
Piers 1	607.323
Piers 2	604.539
Piers 3	601.755
Piers 4	598.971
Piers 5	596.187
E. Abuts.	593.851

* TOP OF FLOORBEAM ℄ GIRDER BEARING

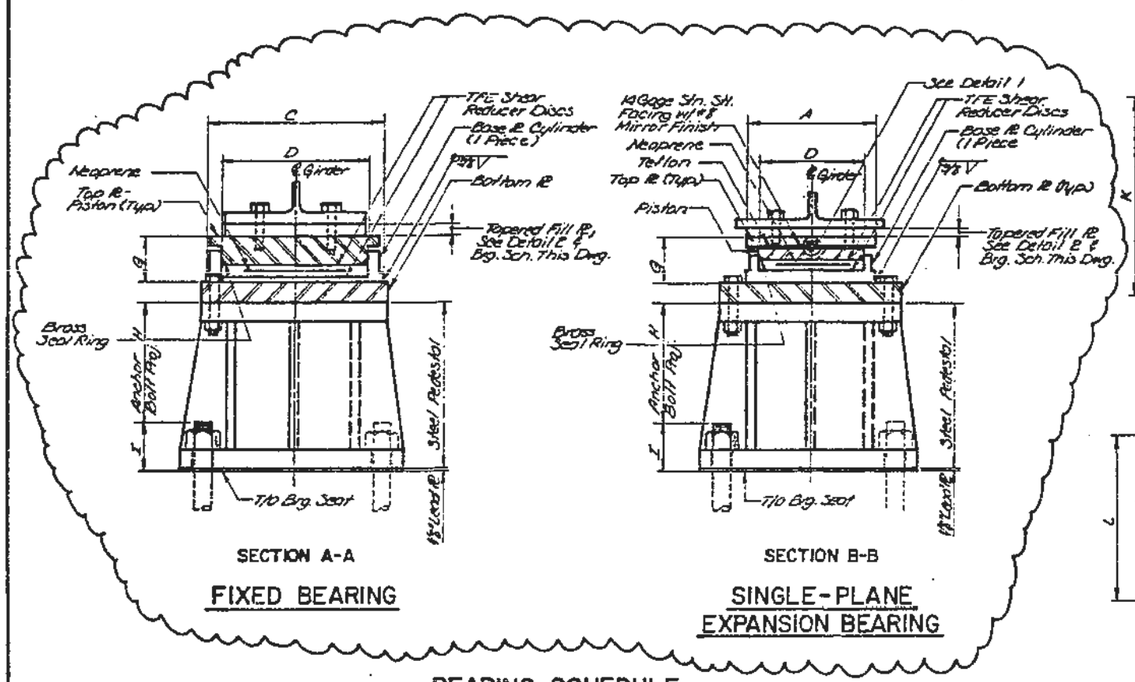
PROCEDURE

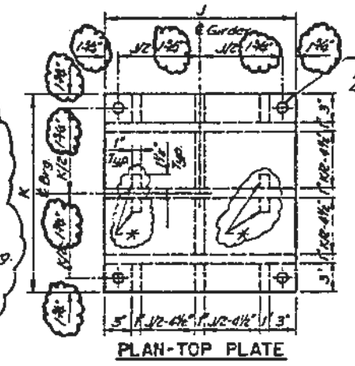
1. THE CONTRACTOR SHALL SUBMIT FOR APPROVAL BY THE ENGINEER, PLANS FOR RAISING EXISTING GIRDERS AND PROVIDING NEW BEARINGS AND PEDESTALS PRIOR TO COMMENCING ANY RELATED WORK. THIS WORK SHALL BE DONE AFTER EXISTING CONCRETE DECK IS REMOVED, AFTER STRUCTURAL STEEL REPAIRS HAVE BEEN PERFORMED, AND PRIOR TO POURING OF NEW CONCRETE DECK. MAXIMUM DEAD LOAD REACTION PER GIRDER (WEIGHT OF STEEL ONLY) IS AS FOLLOWS:

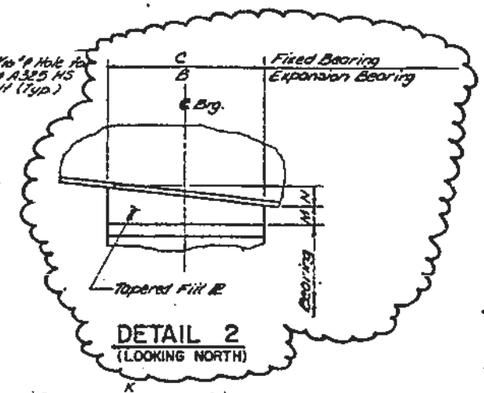
W. ABUTS.	36k	PIERS 3	79k
PIERS 1A, SPAN 1A	36k	PIERS 4	79k
PIERS 1A, SPAN 1	23k	PIERS 5	80k
PIERS 1	80k	E. ABUTS.	23k
PIERS 2	79k		

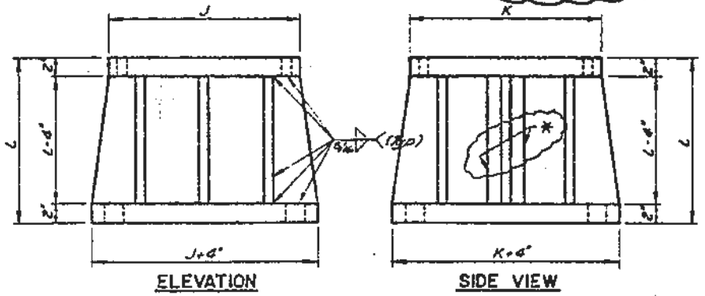
REMOVE NUTS ON ALL EXISTING BEARING ANCHOR BOLTS TO BE RAISED.

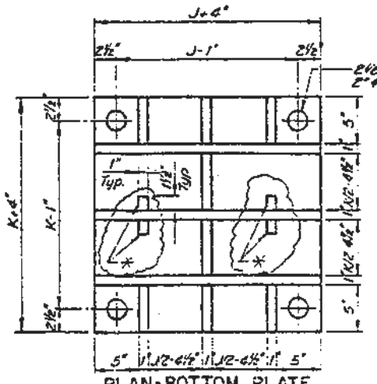
2. CUT OFF EXISTING ANCHOR BOLTS FLUSH WITH BEARING SEAT AT ALL BEARINGS AFTER RAISING.
3. RAISING SHALL BE DONE BY JACKING. MEASURES SHALL BE TAKEN TO PREVENT LATERAL OR LONGITUDINAL DISPLACEMENT OF GIRDERS DURING RAISING OPERATIONS. ALL GIRDERS AT A GIVEN SUBSTRUCTURE ELEMENT SHALL BE SLOWLY AND CONTINUALLY RAISED THE SAME AMOUNT SIMULTANEOUSLY, WITH THE MAXIMUM AMOUNT OF RAISE LIMITED TO 3" GREATER THAN THAT REQUIRED TO INSTALL NEW BEARINGS. ANY SWAY OF THE STEEL DURING RAISING OPERATIONS SHALL BE IMMEDIATELY CORRECTED.
4. THE STEEL SHALL BE RAISED IN INCREMENTS OF 1 1/2" AND SHALL BE BLOCKED IN POSITION UPON COMPLETION OF A RAISING INTERVAL. ADEQUATE BLOCKING MUST BE USED TO HOLD THE STRUCTURE IN PLACE WHILE JACKS ARE REPOSITIONED FOR THE NEXT LIFT.
5. PRIOR TO RAISING, ELEVATIONS OF EXISTING BEARING SEATS SHALL BE TAKEN AND THE ENGINEER SHALL VERIFY FILL PLATE THICKNESSES REQUIRED ABOVE EACH BEARING. THIS SHALL BE ACCOMPLISHED BY USING FIELD MEASUREMENTS ALONG WITH THE "TABLE OF ELEVATIONS - TOP OF STEEL FLOORBEAMS" ON THIS DWG.
6. RAISE BEAMS, REMOVE EXISTING BEARINGS AND ANCHOR BOLTS, INSTALL NEW LEAD PLATES, PEDESTALS, FILL PLATES, AND BEARINGS. INSTALL NEW ANCHOR BOLTS. ALL WORK REQUIRED TO RAISE THE GIRDERS SHALL BE PAID FOR AT THE LUMP SUM PRICE FOR "JACKING EXISTING STRUCTURES." SEE SPECIAL PROVISIONS.

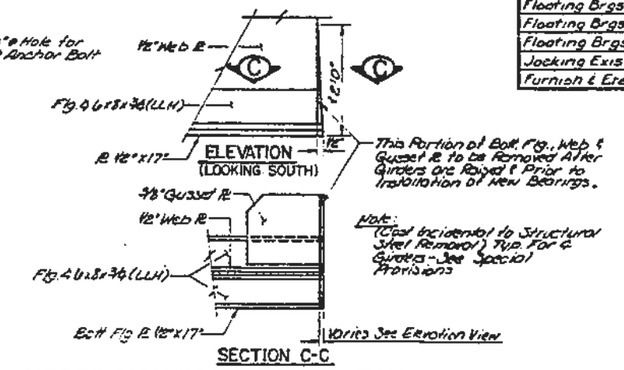












NOTES

1. THE BEARING CONFIGURATIONS AND DETAILS SHOWN ARE FOR GENERAL GUIDANCE FOR THE MANUFACTURER. SLIGHT VARIATIONS IN DIMENSIONS, ETC. WILL BE ALLOWED. SEE SPECIAL PROVISIONS.
2. BEARINGS ARE TO BE DESIGNED BY THE MANUFACTURER FOR THE MINIMUM LOADS GIVEN IN THE BEARING SCHEDULE ON THIS DWG. MANUFACTURER SHALL SUBMIT SHOP DWGS. & DESIGN CALCULATIONS TO THE ENGINEER FOR REVIEW.
3. CONTRACTOR IS RESPONSIBLE FOR ADJUSTING DIMENSIONS AS REQUIRED IN THE FIELD FOR THE ACTUAL BEARINGS USED.
4. EXPANSION BEARINGS SHALL BE SET AT 0" AT 50°F. ADJUST 1/8" PER 100 °F. OF EXPANSION PER 15°F VARIATION.
5. SEE DWG. NO. 23 FOR ANCHOR BOLT DETAILS.
6. THE STEEL PEDESTALS, FILL PLATES, & LEAD PLATES ARE INCLUDED IN "FURNISHING & ERECTING STRUCTURAL STEEL."

ILLINOIS COIL-LOCK ANCHOR BOLT

PLAN-COIL WIRE

MATERIALS FOR ILLINOIS COIL-LOCK ANCHOR BOLT

THE ANCHOR BOLT SHALL BE FABRICATED FROM COLD DRAWN OR HOT FINISHED SEAMLESS CARBON STEEL MECHANICAL TUBING CONFORMING TO ASTM A 519, GRADE 1026 AND SUPPLIED WITH HEXAGONAL NUTS AND CUT WASHERS.

THE COIL WIRE SHALL BE MADE OF ANY SUITABLE SOFT STEEL WIRE.

THE FINISHED ANCHOR BOLT SHALL BE CLEANED OF RUST AND OTHER FOREIGN MATERIALS AND WRAPPED OR PACKAGED TO PREVENT CONTAMINATION UNTIL THEY ARE INSTALLED.

THE EPOXY GROUT SHALL BE A TWO-COMPONENT, EPOXY RESIN BONDING SYSTEM CONFORMING TO ASTM C881, TYPE I, GRADE 1 AND OF A CLASS SUITABLE FOR THE TEMPERATURE OF INSTALLATION.

INSTALLATION PROCEDURE FOR ILLINOIS COIL-LOCK ANCHOR BOLT

1. WITH THE COIL WIRE IN PLACE, THE BOLT SHALL BE INSERTED INTO THE HOLE AND TURNED CLOCKWISE TO A SNUG FIT IN THE HOLE. NUT AND WASHER SHALL BE PLACED ON THE BOLT. THE NUT SHALL BE SELF-LOCKING AND SET FOR 1/4" FREE PLAY.
2. EPOXY GROUT SHALL BE PUMPED THROUGH THE HEXH FITTING WITH A PRESSURE GUN. PUMPING SHALL CONTINUE UNTIL THE EPOXY OVERFLOWS THE HOLE AROUND THE BOLT SHANK. AFTER PUMPING IS DISCONTINUED, EXCESS EPOXY SHALL BE IMMEDIATELY WIPED OFF.

ALTERNATE ANCHOR BOLTS

THE CONTRACTOR MAY USE, AT HIS OPTION, THE CAPSULE OR THE ADHESIVE CARTRIDGE TYPE ANCHOR RODS THAT HAVE BEEN PREVIOUSLY TESTED AND GIVEN A PRIOR APPROVAL BY THE DEPARTMENT. THE CONTRACTOR SHALL INSTALL THESE ANCHOR RODS IN PRE-DRILLED HOLES IN ACCORDANCE WITH THE MANUFACTURER'S RECOMMENDATIONS AND PROCEDURES.

THE CAPSULE OR THE ADHESIVE CARTRIDGE TYPE ANCHOR RODS SHALL BE A TWO PART SYSTEM COMPOSED OF:

1. A THREADED ROD STUD WITH NUT AND WASHER CONFORMING TO ASTM A307.
2. A SEALED GLASS CAPSULE OR A SEALED GLASS ADHESIVE CARTRIDGE CONTAINING PREMEASURED AMOUNT OF THE ADHESIVE CHEMICAL.

GENERAL NOTES

1. HOLES DRILLED IN THE CONCRETE (THROUGH THE PEDESTAL PLATE HOLES) TO THE DIAMETER AND DEPTH SHOWN AND IN ACCORDANCE WITH THE ANCHOR BOLT MANUFACTURER'S RECOMMENDATIONS.
2. PRIOR TO SETTING THE BOLTS, THE HOLES SHALL BE DRY AND ALL DUST AND LOOSE PARTICLES SHALL BE REMOVED BY THE USE OF COMPRESSED AIR OR VACUUMING.
3. THE ANCHOR BOLTS, INCLUDING REMOVAL OF EXISTING ANCHOR BOLTS, DRILLING & PREPARATION OF HOLES, SETTING OF NEW ANCHOR BOLTS WITH EPOXY GROUT OR CAPSULES, SHALL BE PAID FOR AT THE UNIT PRICE BID PER POUND FOR FURNISHING & ERECTING STRUCTURAL STEEL.

GENERAL NOTES

G. N. -100
ENGLISH UNITS OF MEASUREMENT SHALL GOVERN OVER AND SUPERSEDE ANY METRIC UNITS SHOWN IN THIS CONTRACT. WHERE INCLUDED, METRIC UNITS ARE FOR INFORMATION ONLY.

G. N. -105.07B
EXISTING STATE-OWNED AND MAINTAINED UTILITY LINES ARE SHOWN ON THE PLANS TO INDICATE THEIR PRESENCE AND APPROXIMATE LOCATION. THE CONTRACTOR SHALL SECURE AN APPROVED LOCATING FIRM TO LOCATE STATE-OWNED UTILITIES PRIOR TO COMMENCING ANY EXCAVATION IN THE VICINITY OF THESE LINES IN ACCORDANCE TO SECTION 803 OF THE STANDARD SPECIFICATIONS. SHOULD ANY OF THE LINES BE DAMAGED BY THE CONTRACTOR'S OPERATION, THE CONTRACTOR SHALL REPAIR THEM TO THE SATISFACTION OF THE ENGINEER AT NO COST TO THE STATE.

ALSO THERE MAY BE UTILITIES PRESENT WHICH WERE INSTALLED BY THE STATE BUT ARE MAINTAINED BY OTHERS (CITY, TOWN, ETC.) THE APPROXIMATE LOCATIONS OF THESE LINES ARE ALSO SHOWN ON THE PLANS ALONG WITH THE NAME OF THE MAINTAINING AGENCY. THE CONTRACTOR SHALL COORDINATE THE LOCATION OF THESE LINES WITH THE LOCAL AGENCY PRIOR TO COMMENCING ANY EXCAVATION OR BORING IN THEIR VICINITY. SHOULD THESE LINES BE DAMAGED BY THE CONTRACTOR'S OPERATIONS, THE CONTRACTOR SHALL REPAIR THEM TO THE SATISFACTION OF, AND AT NO COST TO, THE LOCAL AGENCY AND THE STATE.

MR. ADRIAN GREENWELL - HIGHWAY LIGHTING
ILLINOIS DEPARTMENT OF TRANSPORTAIION
13473 IL HWY 133
P.O. BOX 610
PARIS, IL 61944

G. N. -105.09A
ALL ELEVATIONS SHOWN IN THE PLANS ARE BASED ON NORTH AMERICAN VERTICAL DATUM OF 1988. (NAVD 88)

G. N. -281
THE RIPRAP GRADATION SHALL BE IN ACCORDANCE WITH THE GRADATION SPECIFIED IN THE PLANS OR, WITH APPROVAL OF THE ENGINEER, A RIPRAP GRADATION MEETING A D50 GREATER THAN OR EQUAL TO 0.8 FEET FOR A4 AND 1.1 FEET FOR A5. D50 IS DEFINED AS THE MEAN ROCK SIZE AS DESCRIBED IN THE FHWA HYDRAULIC ENGINEERING CIRCULARS (HEC 11, HEC 14 AND HEC 15).

IF GRAVEL IS USED FOR THE BEDDING MATERIAL UNDER RIPRAP, THE GRAVEL SHALL BE CRUSHED AS ALLOWED UNDER ARTICLE 1005.01.
