BAR SPLICER ASSEMBLY FOR #5 BAR ON STUB ABUTMENTS

No. required = 318

NOTES

Splicer bars shall be deformed with threaded ends and have a minimum 60 ksi yield strength.
All reinforcement shall be lapped and tied to the splicer bars.
Bar splicer assemblies shall be epoxy coated according to the requirements for reinforcement bars. See Section 508 of the Standard Specifications.
See special provision for Mechanical Splicers.
See approved list of bar splicer assemblies and mechanical splicers for alternatives.

Bench Mark: Chiseled square on South end of crash wall, West Pier. Elev. 724.66.

Existing Structure: S.N. 101-0123 built in 1971 as F.A.U. Rte. 5146, Section 1-2HB at Station 688+32.18. Repainted in 1985; rehabilitated and overlaid in 2005. The superstructure consists of a R.C. deck 332'-10" back to back of abutments and 26'-6" out to out, supported on three-span continuous steel plate girders, on stub abutments and column frame piers. Traffic shall be detoured during construction.

Existing Light Poles, Bridge Railing, and Approach Guardrail to be salvaged and delivered to the City of Rockford maintenance yard.

			CONTRACT NO. 64B79		
FED. ROAD DIST. NO. 2	ILLINOIS	FED. AID PROJECT			

STATE OF ILLINOIS
DEPARTMENT OF TRANSPORTATION

GENERAL NOTES

1. Fasteners shall be AASHTO M164 Type 1, mechanically galvanized bolts (in painted areas and M164 Type 3 in unpainted areas). Bolts $\frac{7}{8}$ in. ϕ, holes 1 in. ϕ, unless otherwise noted.
2. Calculated weight of Structural Steel = 9,083 pounds
3. No field welding is permitted except as specified in the contract documents.
4. Reinforcement bars shall conform to the requirements of ASTM A 706 Gr 60. See Special Provisions.
5. Reinforcement bars designated (E) shall be epoxy coated.
6. Prior to pouring the new concrete deck, all heavy or loose rust, loose mill scale, and other loose or potentially detrimental foreign material shall be removed from the surfaces in contact with concrete. Tightly adhered paint may remain unless otherwise noted. Removal shall be accomplished by methods that will not damage the steel and the cost will be included in the pay item covering removal of the existing concrete.
   As directed by the Engineer, existing construction accessories welded to the top flange of girders shall be removed. The weld areas shall be ground flush and inspected for cracks using magnetic particle testing (MT) or dye penetrant testing (PT) by qualified personnel approved by the Engineer.
   Any cracks that cannot be removed by grinding $\frac{1}{4}$ inch deep shall be identified and reported to the Bureau of Bridges and Structures for further disposition. The cost of removing welded accessories, grinding and inspecting weld areas and grinding cracks will be paid for according to Article 109.04 of the Standard Specifications.
7. If the Contractor elects to use cantilever forming brackets on the exterior girders, the brackets shall be placed at the same locations as required for the hardwood blocks in Article 503.06(b) of the Standard Specifications. If additional cantilever forming brackets are required, hardwood blocking shall be wedged between the exterior and first interior girder at each of these additional bracket locations.
8. Plan dimensions and details relative to existing plans are subject to nominal construction variations. The Contractor shall field verify existing dimensions and details affecting new construction and make necessary approved adjustments prior to construction or ordering of materials. Such variations shall not be cause for additional compensation for a change in scope of the work, however, the Contractor will be paid for the quantity actually furnished at the unit price bid for the work.
9. The existing structural steel coating contains lead. The Contractor shall take appropriate precautions to deal with the presence of lead on this project.
10. Cleaning and painting of the existing structural steel shall be as specified in the Special Provision "Cleaning and Painting Existing Steel Structures." All existing steel shall be cleaned per Near White Blast Cleaning SSPC-SP10. All existing steel shall be painted according to the requirements of Paint System 1-OZ/E/U. The color of the final finish coat shall be Gray, Munsell No. 5B 7/1. The color of the final finish coat for the exterior and bottom of bottom flange of fascia beams shall be Blue, Munsell No. 10B 3/6.
11. Individual cross frames or diaphragms at supports may be temporarily disconnected to install bearing anchor rods.
12. The concrete for bridge decks finished according to Article 503.16(a) of the Standard Specifications shall be placed and compacted parallel to the skew in uniform increments along centerline of bridge. The machine used for finishing shall be set parallel to the skew for striking off and screeding the concrete.
13. Two $\frac{1}{8}$ in. adjusting shims shall be provided for each bearing in addition to all other plates or shims and placed as shown on bearing details.
14. Slopewall shall be reinforced with welded wire fabric, 6" x 6" - W4.0 x W4.0, weighing 58 lbs. per 100 sq. ft.
15. Existing reinforcement shall be cleaned and incorporated into the new construction. Cost included with Concrete Removal.
16. This structure will retain the same number 101-0123

All new structural steel shall be painted with an inorganic zinc-rich primer per AASHTO M300, Type 1.

SCOPE OF WORK

1. Remove and replace existing concrete deck.
2. Install stud shear connectors in positive moment areas of Span 3.
3. Remove existing rocker bearings at abutments and Pier 2 and replace with elastomeric bearings.
4. Remove and replace approach slabs.
5. Partially remove and reconfigure wingwalls and abutment back wall to account for widening.
6. Repair abutments, piers and slopewalls.
7. Retrofit ends of all existing girders with steel plates and angles.
8. Clean and paint existing structural steel.

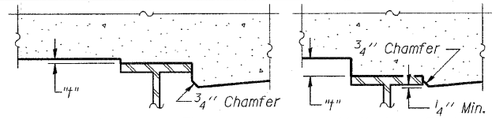
DEAD LOAD DEFLECTION DIAGRAM

(Includes weight of concrete only.)

Note:
The above deflections are not to be used in the field if the engineer is working from the grade elevations adjusted for dead load deflections as shown below.



At Minimum Fillet — At Maximum Fillet

To determine "t": After all structural steel has been erected, elevations of the top flanges of the beams shall be taken at intervals shown below. These elevations subtracted from the "Theoretical Grade Elevations Adjusted for Dead Load Deflection" shown below, minus slab thickness, equals the fillet heights "t" above top flange of beams.

To determine "t": After all structural steel has been erected, elevations of the top flanges of the beams shall be taken at intervals shown below. These elevations subtracted from the "Theoretical Grade Elevations Adjusted for Dead Load Deflection" shown below, minus slab thickness, equals the fillet heights "t" above top flange of beams.

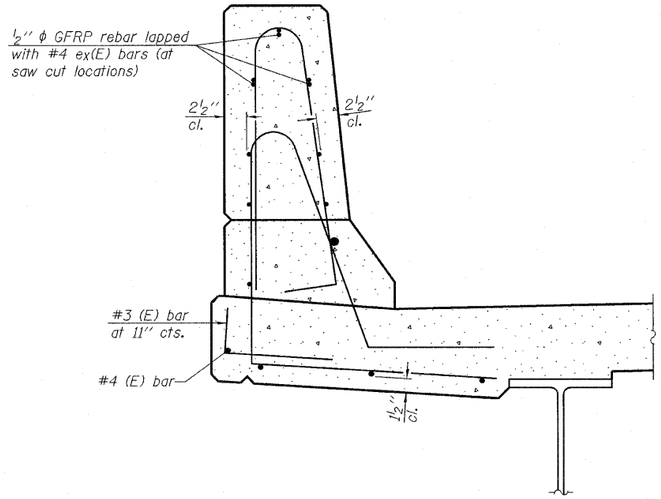
SECTION
(Showing dimensions)



SECTION
(Showing reinforcement clearances for slip forming and additional reinforcement bars)

GENERAL NOTES

All dimensions shall remain the same as shown on superstructure details, except dimensions A and B which are to be revised as shown to provide additional clearance. Additional concrete needed to revise dimension A and B = 0.0165 cu. yds./ft. of parapet.

Place aluminum sheet in curb portion at and near piers. Full thickness saw cut at all joint locations in lieu of cork joint filler.

Steel superstructure shown. Other superstructure types similar.

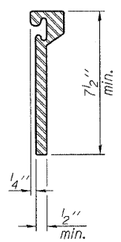
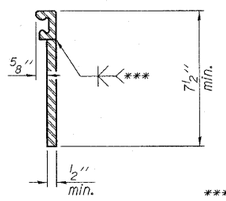
7/16" ϕ holes at 4'-0" cts. for 3/8" ϕ bolts. All bolts shall be burned, sawed, or chipped off flush with the plates after forms are removed, typ.

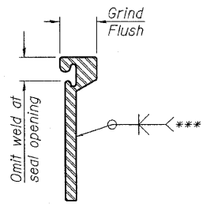
SECTION THRU ROLLED RAIL JOINT



ROLLED EXTRUDED RAIL



WELDED RAIL

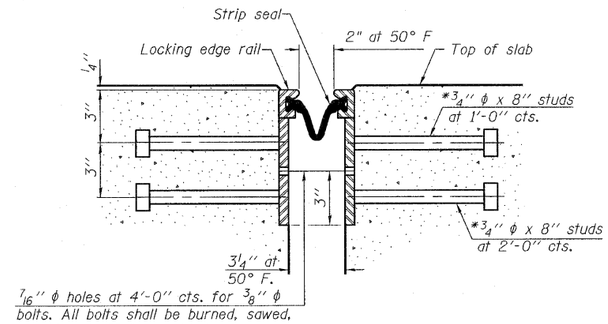


*** Back gouge not required if complete joint penetration is verified by mock-up.

LOCKING EDGE RAIL SPLICE

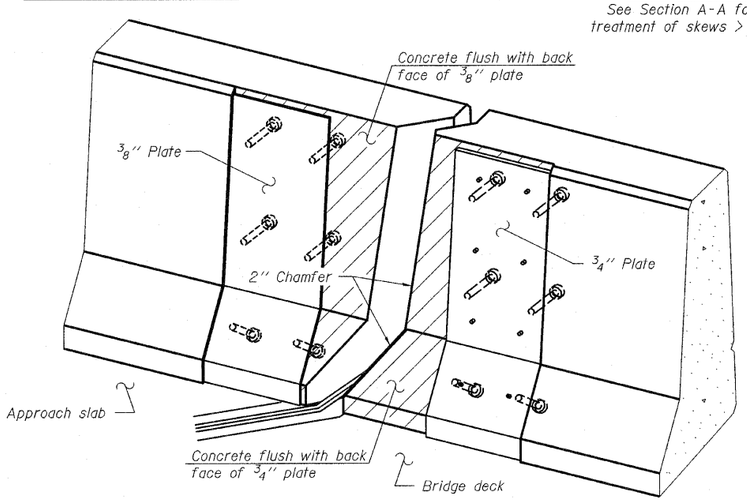
The inside of the locking edge rail groove shall be free of weld residue.

Rolled rail shown, welded rail similar.



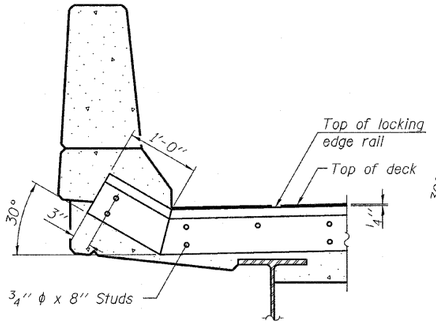
7/16" ϕ holes at 4'-0" cts. for 3/8" ϕ bolts. All bolts shall be burned, sawed, or chipped off flush with the plates after forms are removed, typ.

SECTION THRU WELDED RAIL JOINT



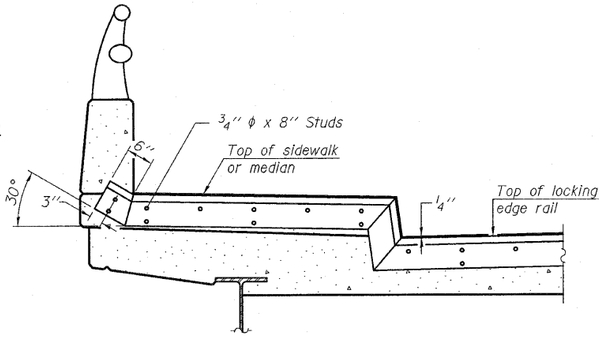
TRIMETRIC VIEW

(Showing back plates only)



AT PARAPET

See Section A-A for end treatment of skews > 30°.



AT SIDEWALK OR MEDIAN

Shorter plates with a single row of studs at 12" cts. may be necessary on medians which are shallower than 9". See manufacturer's recommendation.

TYPICAL END TREATMENTS

Notes:

The strip seal shall be made continuous and shall have a minimum thickness of 1/4". The configuration of the strip seal shall match the configuration of the Locking Edge Rails. Open or "webbed" strip seal gland configurations are not permitted. The gland shall be sized for a maximum rated movement of 4 inches.

The Locking Edge Rails depicted are conceptual only, except for the minimum dimensions shown. The actual configuration of the Locking Edge Rails and matching strip seal may vary from manufacturer to manufacturer. Flanged edge rails will not be allowed. Locking Edge Rails may be spliced at slope discontinuities.

The manufacturer's recommended installation methods shall be followed.

The joint opening and deck dimensions detailed on the superstructure are based on a rolled rail expansion joint. If the Contractor elects to use the welded rail expansion joint, the opening and deck dimensions shall be modified according to the dimensions detailed on this sheet. Required modifications shall be made at no additional cost to the State.

All steel components shall be galvanized after fabrication according to Article 520.03 of the Standard Specifications.

Maximum space between rail segments at stage lines shall be 3/16", sealed with a suitable sealant.

Item	Unit	Total
Modular Expansion Joint - Swivel 6"	Foot	63

Notes:
Work this sheet with sheets 12 and 16 of 33.
See Sheet 16 of 33 for Section A-A.
See Sheet 12 of 33 for Section D-D.
Support Boxes shall be rigidedly attached to cross frame beams and abutment backwall by adjustable brackets, stools or shims. Cost of attachement included in "Modular Expansion Joint - Swivel 6" ".

The Swivel Modular Expansion Joint shall be either MAURER Swivel system by D.S. Brown Co. or the WABO X-CEL system by Watson Bowman Acme Corporation. The joint shall provide for a $2\frac{5}{8}$" movement.

Joint openings shall be adjusted according to Article 503.10(c) of the Standard Specifications when the blockout is cast at an ambient tempurature other than 50° F.

Cover plates and slide plates shall be AASHTO M270 Grade 36 steel, and hot dipped galvanized according to AASHTO M111 after fabrication.

Countersunk Cap Screws and Concrete Inserts shall be Hot-dipped galvanized according to AASHTO M232.

The cost of furnishing the Cover Plates, Slide Plates, Countersunk Cap Screws, Stud Anchors, and the Installation of these items shall be included with "Modular Expansion Joint - Swivel 6" ".

For Reinforcing at Expansion Joint see Section D-D on Sheet 12 of 33.

Dimensions shown require field verification and coordination with the manufacturer and may require adjustment.

Modular expansion joints shall be assembled in their final relative position with the ends in place for shop inspection and acceptance.

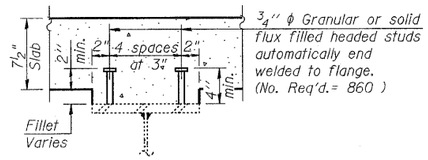
Fillet of 2" was included in calculating composite section properties.



SECTION A-A

I_s, S_s: Non-composite moment of inertia and section modulus of the steel section used for computing f_s (Total and Overload) due to non-composite dead loads (in.4 and in.3).

$I_c(n)$, $S_c(n)$: Composite moment of inertia and section modulus of the steel and deck based upon the modular ratio, "n", used for computing f_s (Total and Overload) due to short-term composite live loads (in.4 and in.3).

$I_c(3n)$, $S_c(3n)$: Composite moment of inertia and section modulus of the steel and deck based upon 3 times the modular ratio, "3n", used for computing f_s (Total and Overload) due to long-term composite (superimposed) dead loads (in.4 and in.3).

Z: Plastic Section Modulus of the steel section in non-composite areas (in.3).

ℓ: Un-factored non-composite dead load (kips/ft.).

$M\ell$: Un-factored moment due to non-composite dead load (kip-ft.).

$s\ell$: Un-factored long-term composite (superimposed) dead load (kips/ft.)

$M_s\ell$: Un-factored moment due to long-term composite (superimposed) dead load (kip-ft.).

ML: Un-factored live load moment (kip-ft.).

$M1$: Un-factored moment due to impact (kip-ft.).

Ma: Factored design moment (kip-ft.).
$1.3\ [\ M\ell + M_s\ell + \frac{5}{3}(ML + M1)]$

Mu: Compact composite moment capacity according to AASHTO LFD 10.50.1.1 or compact non-composite moment capacity according to AASHTO LFD 10.48.1 (kip-ft.).

f_s (Overload): Sum of stresses as computed from the moments below (ksi).
$M\ell + M_s\ell + \frac{5}{3}(ML + M1)$

f_s (Total): Sum of stresses as computed from the moments below on non-compact section (ksi).
$1.3\ [M\ell + M_s\ell + \frac{5}{3}(ML + M1)]$

VR: Maximum L + impact shear range within the composite portion of the span for stud shear connector design (kips).

BILL OF MATERIAL

Item	Unit	Total
Stud Shear Connectors	Each	860

Notes:

Existing Stud Shear Connectors are to be maintained. No Transverse saw-cuts are allowed. Contractor is reponsible for the replacement of Stud Shear Connectors that are damaged during Removal of Existing Concrete Deck.

Resident Engineer may relocate Stud Shear Connectors shown as required to miss exiting connection bolts or existing Stud Shear Connections.

BEARING ASSEMBLY

Note:
Shim plates shall not be placed under Bearing Assembly.

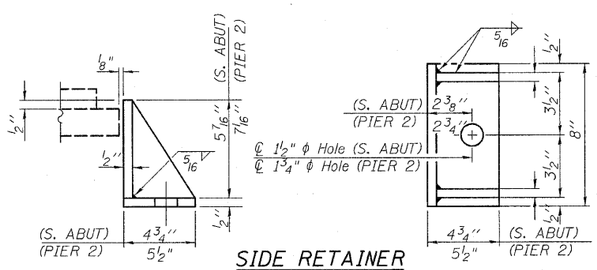
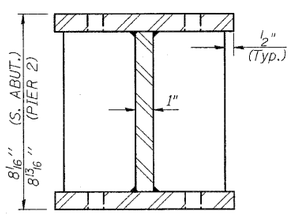
TYPE I ELASTOMERIC EXP. BRG. (PIER 2)

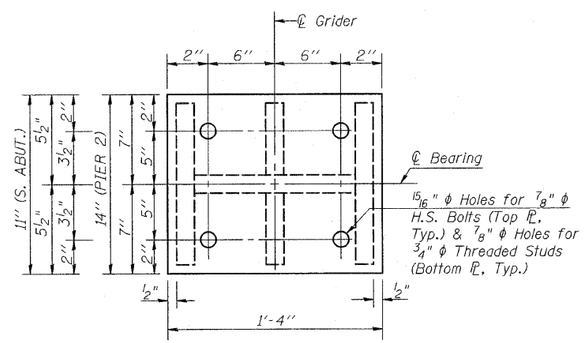


SIDE RETAINER

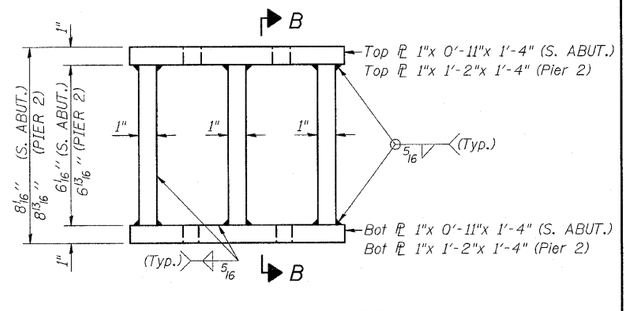
Equivalent rolled angle with stiffeners will be allowed in lieu of welded plates.



SECTION B-B



STEEL EXTENSION PLAN



STEEL EXTENSION ELEVATION

BILL OF MATERIAL

Item	Unit	Total
Elastomeric Bearing Assembly, Type I	Each	8
Anchor Bolts, 1 1/4"	Each	8
Anchor Bolts, 1 1/2"	Each	8

Notes:
Anchor bolts shall be ASTM F1554 all-thread (or an Engineer-approved alternate material) of the grade(s) and diameter(s) specified. ASTM A307 Grade C anchor bolts may be used in lieu of ASTM F1554 Grade 36 (Fy=36ksi). The corresponding specified grade of AASHTO M314 anchor bolts may be used in lieu of ASTM F1554.

Anchor bolts for side retainers may be cast in place or installed in holes drilled before or after members are in place.

Drilled and set anchor bolts shall be installed according to Article 521.06 of the Standard Specifications.

Side retainers and other steel members required for the bearing assembly shall be included in the cost of Elastomeric Bearing Assembly, Type I.

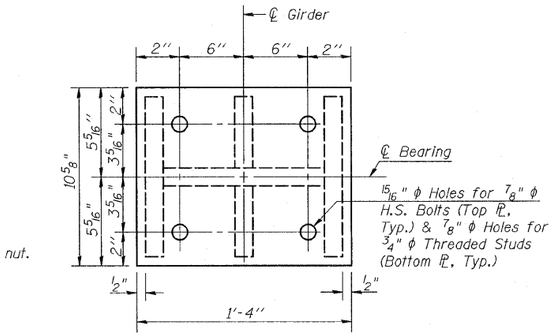
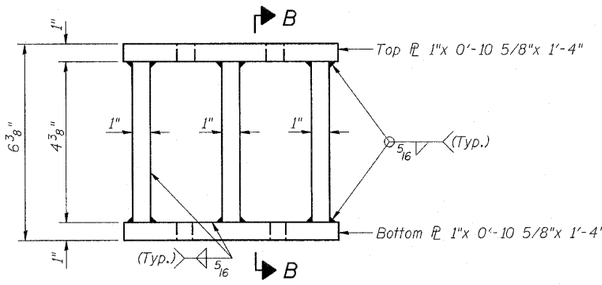
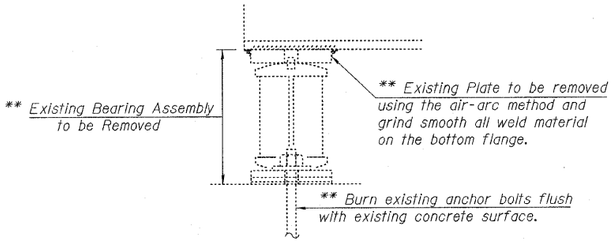
PLAN-PTFE SURFACE



STEEL EXTENSION PLAN



STEEL EXTENSION ELEVATION



**Cost is included with Jacking and Remove Existing Bearings

REMOVE EXISTING BEARINGS AT ABUTMENTS

JACKING AND REMOVING PROCEDURES

1. Prior to commencing any work at the bearings, the contractor shall submit plans for Jacking and Remove Existing Bearings for approval by the Engineer.

   In each removal stage, Jacking and Remove Existing Bearings shall be done after the existing deck is removed and before the new deck is poured.

2. Jacking shall be limited so that the maximum lift transversely between adjacent beams is 1/8". See Special Provision for Jacking and Remove Existing Bearings.

3. Minimum Jack capacity is 30 Tons per bearing.

BILL OF MATERIAL

Item	Unit	Total
Elastomeric Bearing Assembly, Type II	Each	4
Anchor Bolts, 1 1/4"	Each	8

Notes:

Anchor bolts shall be ASTM F1554 all-thread (or an Engineer-approved alternate material) of the grade(s) and diameter(s) specified. ASTM A307 Grade C anchor bolts may be used in lieu of ASTM F1554 Grade 36 (Fy=36ksi). The corresponding specified grade of AASHTO M314 anchor bolts may be used in lieu of ASTM F1554.

Anchor bolts for Type II bearings shall be placed in holes drilled in the concrete through holes in the bottom bearing plate after members are in place. Side retainers shall be placed after bolts are installed.

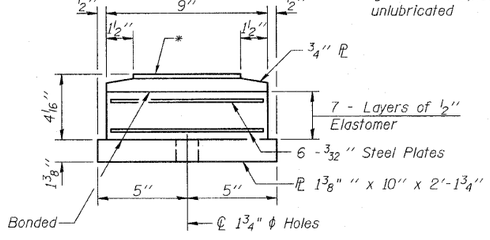
Drilled and set anchor bolts shall be installed according to Article 521.06 of the Standard Specifications.

Side retainers and other steel members required for the bearing assembly shall be included in the cost of Elastomeric Bearing Assembly, Type II.

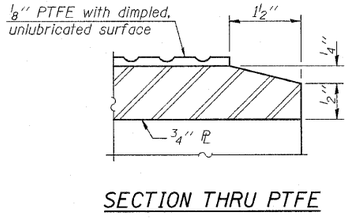
The 1/8" PTFE sheet shall be bonded directly to the top steel plate with a two-component, medium viscosity epoxy resin, conforming to the requirements of the Federal Specification MMM-A-134, Type I. The bond agent shall be applied on the full area of the contact surfaces.

Bonding of 1/8" PTFE sheet during vulcanizing process will be permitted provided the process and method of adjusting assembly height is approved by the Engineer.

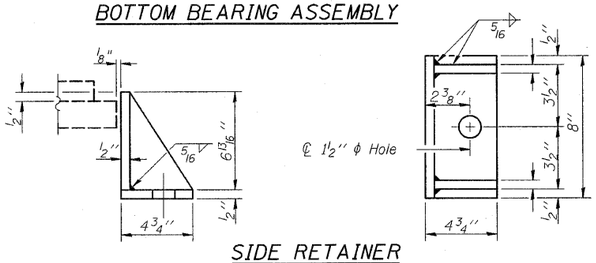
*1/8" PTFE dimpled, unlubricated



BOTTOM BEARING ASSEMBLY



SECTION THRU PTFE



SIDE RETAINER

Equivalent rolled angle with stiffeners will be allowed in lieu of welded plates.

BILL OF MATERIAL

Item	Unit	Total
Concrete Removal	Cu. Yd.	18.1

NOTES

Existing reinforcement bars extending into the removal area shall be blast cleaned to gray metal and straightened. Blast cleaning and straightening shall be included with the cost of Concrete Removal.

Existing reinforcement not extending into areas of new construction shall be cut at the removal line and removed. Cost included with Concrete Removal.

Existing reinforcement bars which have lost more than 25% of their original diameter shall be supplemented by new epoxy coated bars of the same diameter, spliced in place. Furnishing and placing supplemental epoxy coated reinforcement bars shall be included with the cost of Reinforcement Bars, Epoxy Coated.

Care shall be exercised by the contractor during and following removal operations to ensure that the existing rebar remaining in place are not damaged. All protruding rebar shall be cleaned, straightened, and properly positioned prior to concrete placement. Any rebar damaged during concrete removal shall be repaired or replaced using an approved Bar Splicer or Mechanical System. Cost included with Concrete Removal.

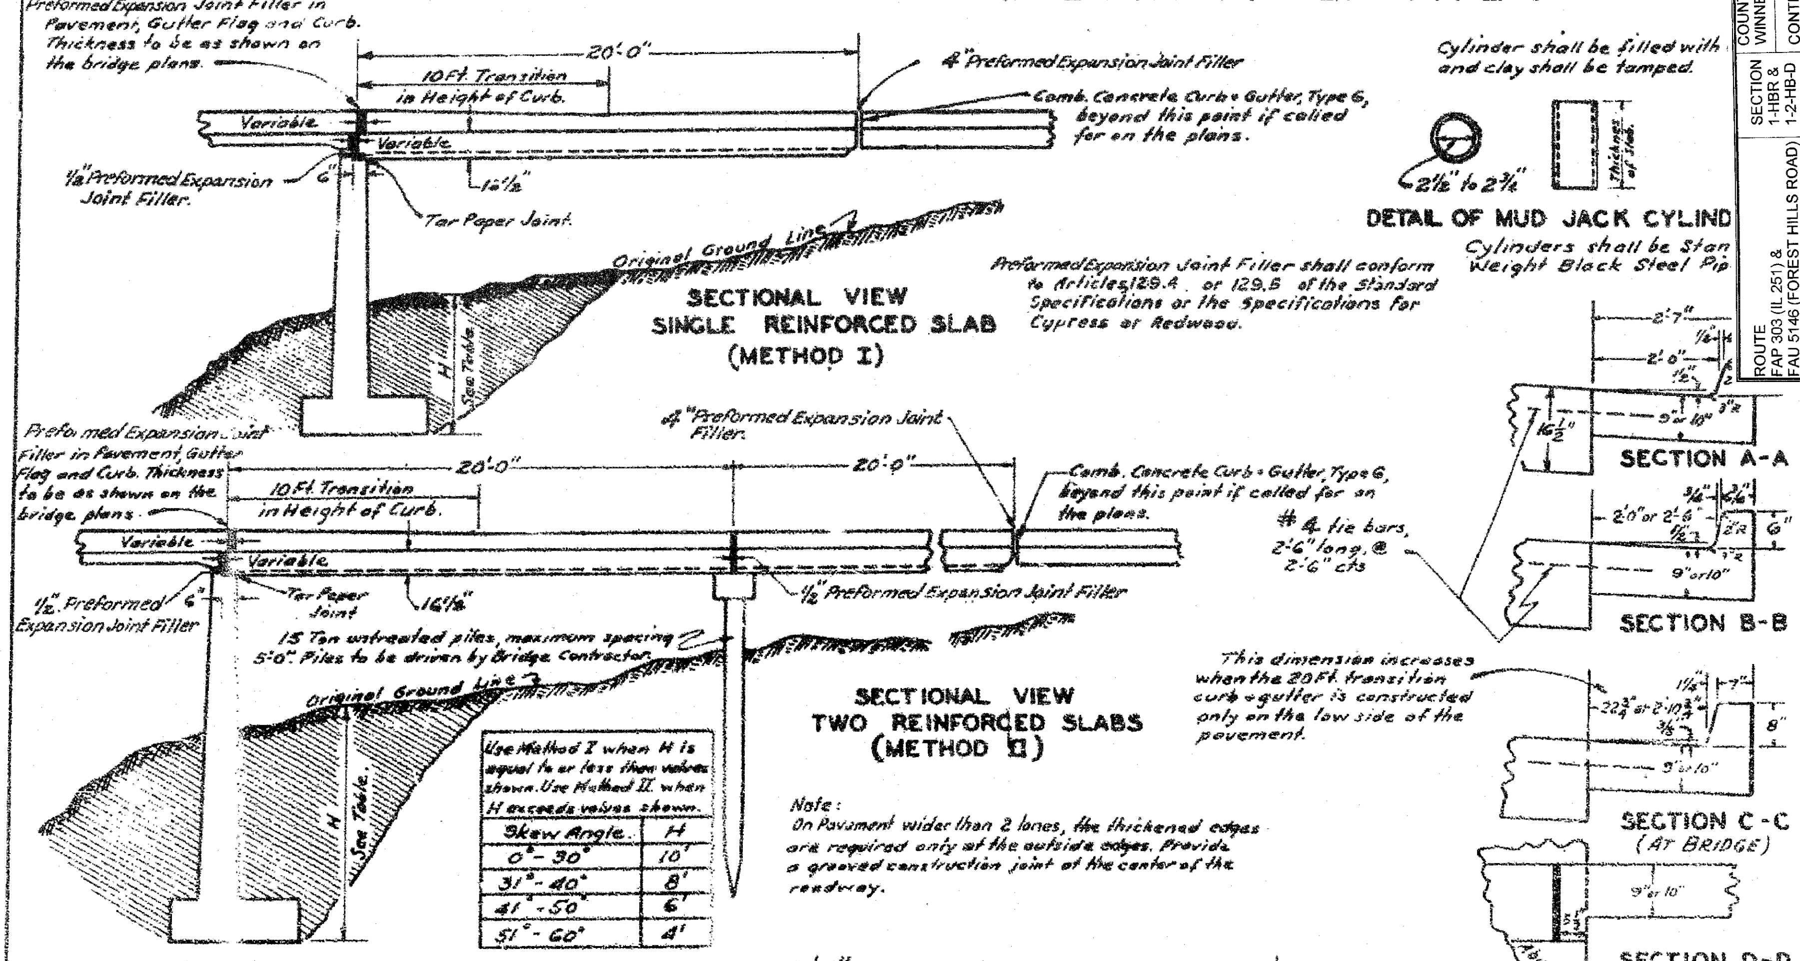
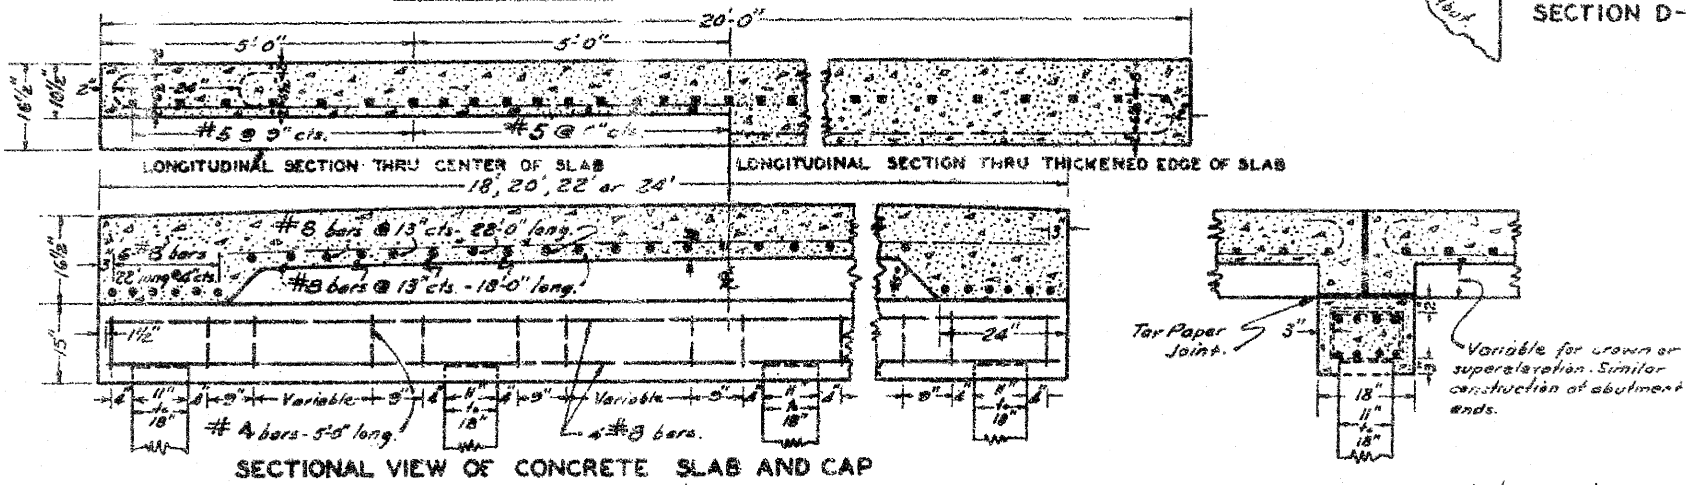
DETAILS OF BRIDGE APPROACHES

USING COMBINATION CONCRETE CURB AND GUTTER TYPE 6



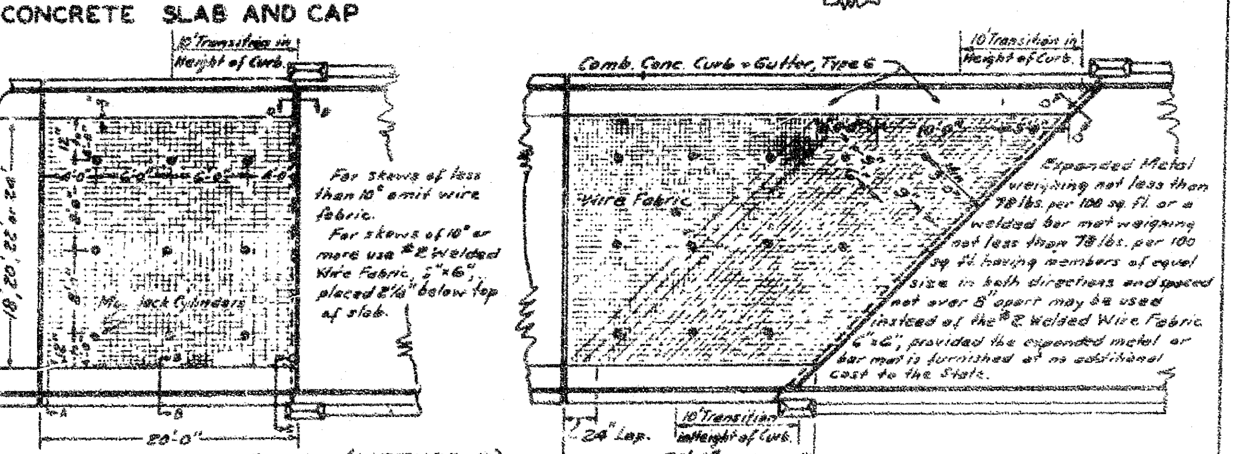
Skew Angle	H
0°-30°	10'
31°-40°	8'
41°-50°	6'
51°-60°	4'

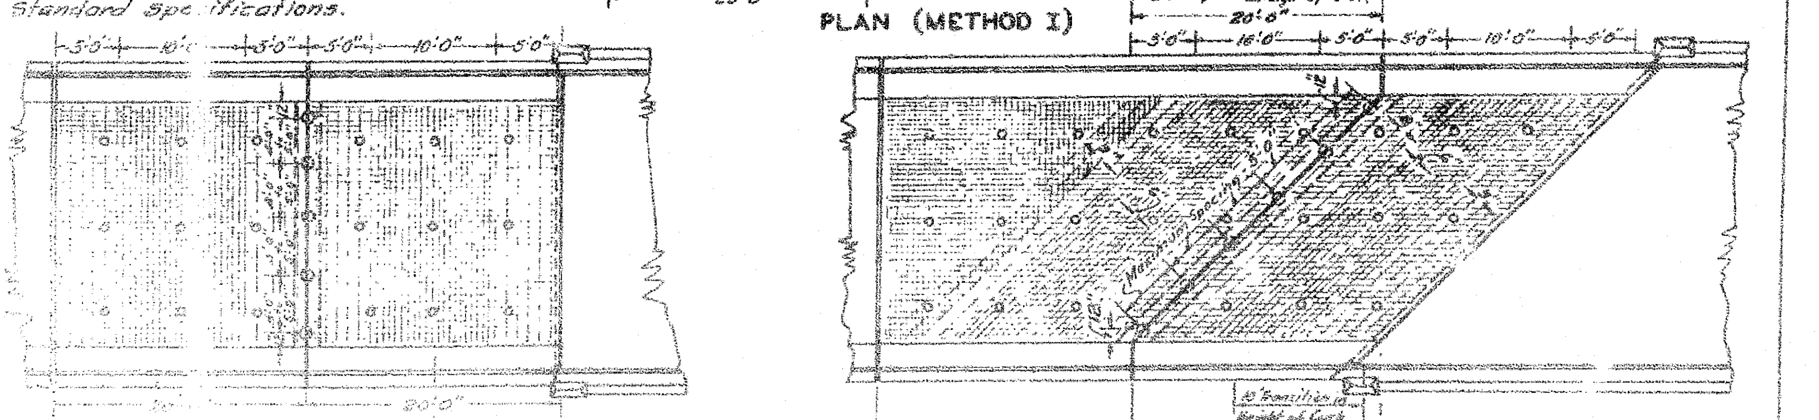
Use Method I when H is equal to or less than values shown. Use Method II when H exceeds values shown.



Where the roadway width of the bridge exceeds the width of the approach pavement by more than 6 ft., the Type 6 Curb + Gutter may be omitted, except where the pavement slopes in one direction only, in which case the Type 6 Curb + Gutter shall be constructed only on the low side of the pavement. The cross section of the curb and gutter of the bridge shall be transformed uniformly to the cross section shown in Section A-A, by a 20 ft. transition curb. Where the Type 6 Curb and Gutter is omitted, the earth shoulders shall be sloped up uniformly to a height of 2 inches above the edge of the pavement and this shoulder raise shall extend approximately 10 ft. back of the bridge and taper in another 10 ft. to the standard shoulder.

The Preformed Expansion Joint Filler shall be included in the contract unit prices for P.C. CONCRETE PAVEMENT (16 1/2"-10 1/2"-16 1/2") and COMBINATION CONCRETE CURB + GUTTER, TYPE 6, and shall conform to Articles 129.4 & 129.5 of the Standard Specifications.





STATE OF ILLINOIS
DEPARTMENT OF PUBLIC WORKS & BUILDINGS
DIVISION OF HIGHWAYS

Passed Sept. 2 1941

The slab or slabs shall be paid for at the contract unit price for P.C. CONCRETE PAVEMENT (16 1/2"-10 1/2"-16 1/2").
The Type 6 Curb + Gutter (including the 10 ft transition in height and including tie bars) shall be paid for at the contract unit price for COMBINATION CONCRETE CURB AND GUTTER, TYPE 6.
The concrete cap shall be paid for at the contract unit price for CLASS X CONCRETE.

All reinforcement bars, except the curb & gutter tie bars, shall be paid for at the contract unit price for REINFORCEMENT BARS. The welded wire fabric and the Mud Jack cylinders shall be furnished and installed by the paving contractor and included in the contract unit price for P.C. CONCRETE PAVEMENT (16 1/2"-10 1/2"-16 1/2").

GENERAL NOTES

All reinforcement bars shall be lapped 24 diameters unless otherwise shown.

Fasteners shall be high strength bolts. Bolts 7/8" φ; open holes 15/16" φ, unless otherwise noted.

Calculated weight of Structural Steel. = 303,300 lbs.

Cast steel shall be Class 70. Structural steel weldments of equal sections and meeting A.S.T.M. A-36 may be substituted for castings at the option of the Contractor, subject to approval by the Engineer prior to fabrication. No additional compensation will be allowed the Contractor for this substitution.

The Basic Lead Silico Chromate paint system shall be used for shop and field painting of structural steel.

Field welding of construction accessories will not be permitted to the bottom flange of beams or girders nor to the top flange for a distance equal to one-fourth the span length each way from the pier supports. Field welding in other areas will be permitted only when approved by the Engineer.

Anchor bolts shall be set before bolting cross frames over supports.

Class A Excavation for structures includes excavation for slope wall.

The embankment configuration shown shall be the minimum embankment that must be constructed prior to construction of the abutments.

The concrete rail section above the mandatory construction joint at the top of the slab shall be constructed of Class X Concrete, except the aggregates shall conform to the requirements of Handrail Concrete.

The Contractor shall drive 2 concrete test piles in permanent locations, one at each abutment as directed by the Engineer before ordering the remainder of piles.

Special Paved Ditch See Special Drawing

One 4' section of the future Storm Sewer System coming into Manholes Special No. 1, No. 2, and No. 3 and at the Paved Ditch R 10+54 Ramp "A" (0+00 SS Line) will be placed in the Manholes or Paved Ditch at the grade and alignment Shown on the plans.

The ends of the sections shall be blocked to prevent deposit of material in the Manholes and care shall be taken during backfilling to prevent damage to the sections.

See sheet No. 13 for plan and profile and other details of the sanitary sewers.

See special drawing for Manhole Type A Special.

See Sheet No 7 for Curve Data and Sheet No 8 for Tie Points

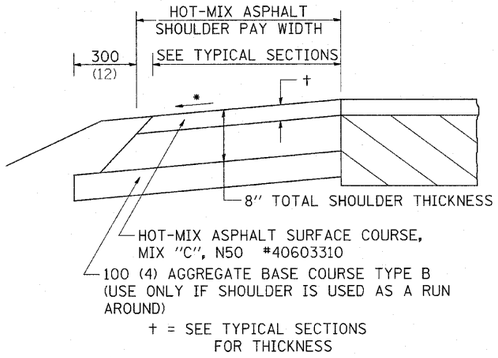
HOT–MIX ASPHALT SHOULDER



GENERAL NOTES

THE HOT-MIX ASPHALT SHOULDER SHALL BE CONSTRUCTED IN ACCORDANCE WITH SECTION 482 EXCEPT THE TOP LIFT SHALL BE HOT-MIX ASPHALT SURFACE COURSE, MIX "C", N50 #40603310. THE WORK WILL BE PAID FOR AT THE CONTRACT UNIT PRICE PER TON FOR HOT-MIX ASPHALT SURFACE COURSE, MIX "C", N50 #40603310 AND SQUARE YARD FOR HOT-MIX ASPHALT SHOULDERS OF THE THICKNESS SPECIFIED.

USE HOT-MIX ASPHALT SURFACE COURSE, MIX "C", N50 #40603310. WHEN RESURFACING EXISTING HOT-MIX ASPHALT SHOULDERS. THE THICKNESS IS SHOWN ON THE TYPICAL SECTIONS. THIS WORK WILL BE PAID FOR AT THE CONTRACT UNIT PRICE PER TON FOR HOT-MIX ASPHALT SURFACE COURSE, MIX "C", N50 #40603310.

REMOVAL OF MATERIAL FOR PLACEMENT OF THE HOT-MIX ASPHALT SHOULDER TO BE PAID FOR IN UNITS FOR EXCAVATING AND GRADING EXISTING SHOULDERS OR IN CUBIC YARDS FOR EARTH EXCAVATION OR EARTH EXCAVATION WIDENING.

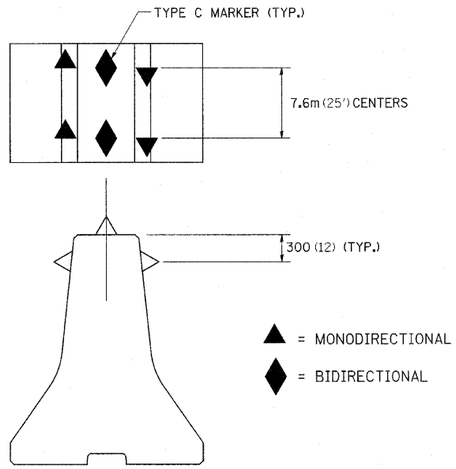
* 4% WHEN MAINLINE IS ON TANGENT. FOR CROSS SLOPE ON SUPERELEVATION SECTION, SEE HIGHWAY STANDARD 482001 OR 482006.

ALL DIMENSIONS ARE IN MILLIMETERS (INCHES) UNLESS OTHERWISE NOTED.

REVISED - 11-01-07

HOT–MIX ASPHALT SHOULDER 23.4a

DELINEATION OF CENTER BARRIER OF TWO–LANE TWO WAY OPERATION



DESIGNER NOTE:

Use this with Traffic Control and Protection Standard 701416 when using concrete barrier vs. flexible delineators as the barrier on centerline.

NOTES

1. All reflectors are to be amber in color and meet the specifications of Section 1097 of the Standard Specifications for Road and Bridge Construction.

2. All reflectors are to be installed in accordance with Section 782 of the Standard Specifications for Road and Bridge Construction.

3. On Interstates do not use the panels mounted on top of the barriers as shown on Standard 701416.

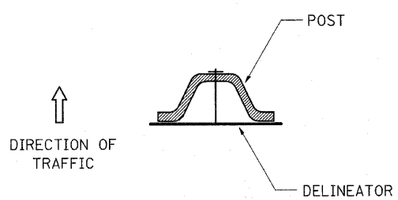
4. The cost of the reflectors will be included in the contract unit price per meter (foot) for Temporary Concrete Barrier.

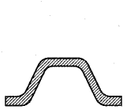
5. ALL DIMENSIONS ARE IN MILLIMETERS (INCHES) UNLESS OTHERWISE NOTED.

REVISED - 1-08-08

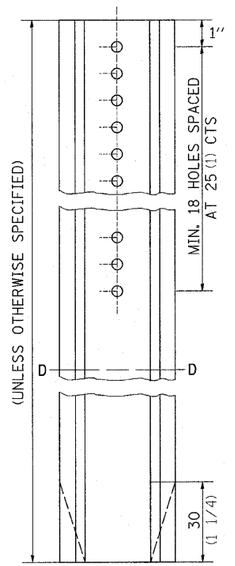
DELINEATION OF CENTER BARRIER OF TWO–LANE TWO WAY OPERATION 25.4

DELINEATOR AND POST ORIENTATION





SECTION D-D



DELINEATORS SHALL BE INSTALLED ACCORDING TO STANDARD 635001 EXCEPT THAT THE POST SHALL BE ROTATED 180° . THE POST WILL HAVE THE WIDE SIDE FACING TRAFFIC AND THE DELINEATOR ATTACHECD AS SHOWN ABOVE.

ALL DIMENSIONS ARE IN MILLIMETERS (INCHES) UNLESS OTHERWISE NOTED.

REVISED - 11-01-07

DELINEATOR AND POST ORIENTATION 37.4

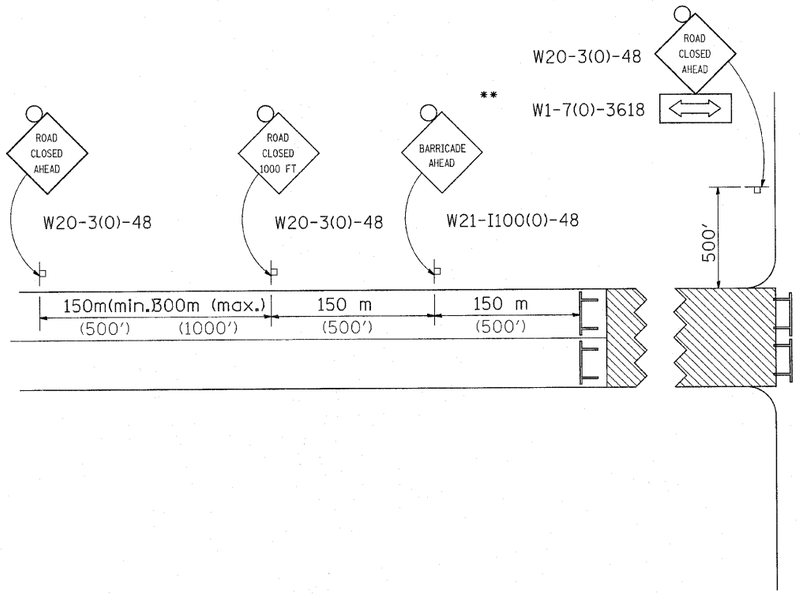
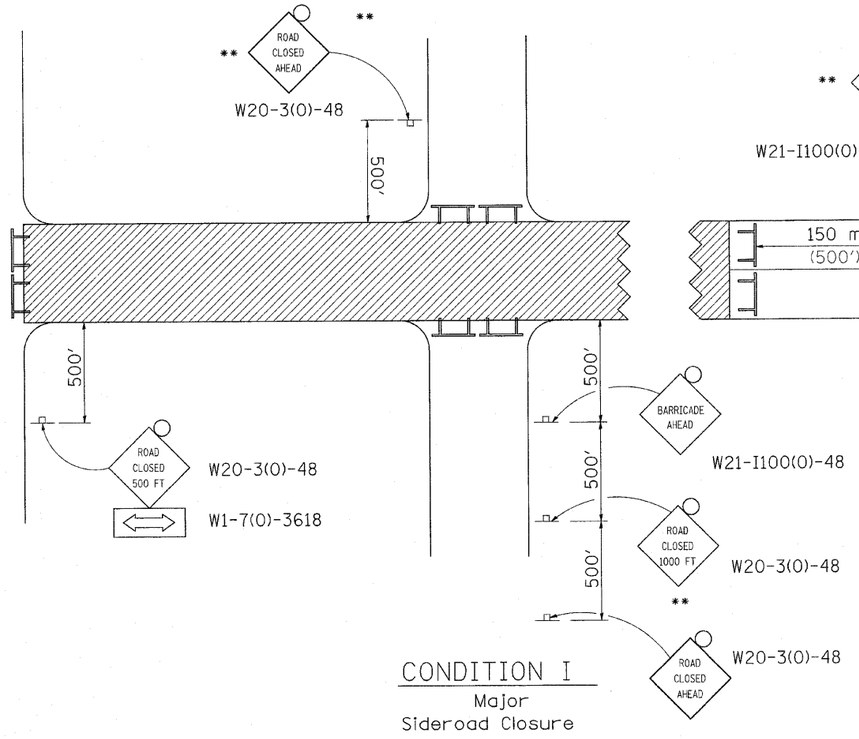
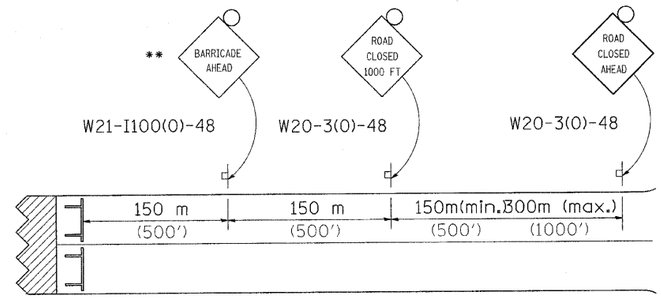
TRAFFIC CONTROL FOR ROAD CLOSURE

CONDITION II

Minor
Sideroad Closure







CONDITION I

Major
Sideroad Closure

GENERAL NOTES

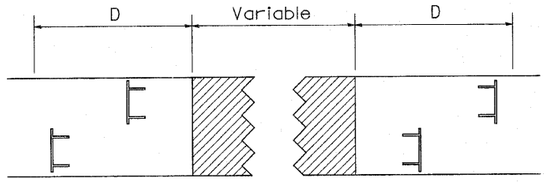
Longitudinal dimensions may be adjusted to fit field conditions.

When speed limit is less than 45mph, change sign spacing to 250' and change ROAD CLOSED 1000 FT to ROAD CLOSED 500 FT.

Side roads requiring all three signs as shown in CONDITION I (Major Sideroad Closure), shall be listed in the special provision.

** Where local access is to be maintained, barricades are to be set up as shown in Road Closed to thru traffic. Type III Barricades and R11-2-4830 signs shall be as shown in "Road Closed To All Traffic" detail on Highway Standard 701901.

ROAD CLOSED TO THRU TRAFFIC BARRICADE SET UP



Type III Barricades and R11-4-4830 signs shall be as shown in "Road Closed To All Thru Traffic" detail on Highway Standard 701901. If the distance "D" exceeds 600 m (2000') an additional set of barricades and R11-4-4830 shall be placed at each end of the work area.

SYMBOLS
