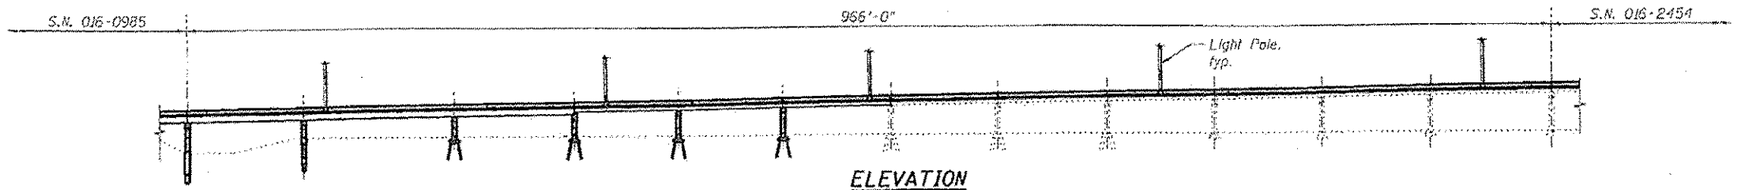
Bench Mark: Chiseled square of NE corner of NB IL-171 bridge wingwall over BNSF RR. El. 640.61.

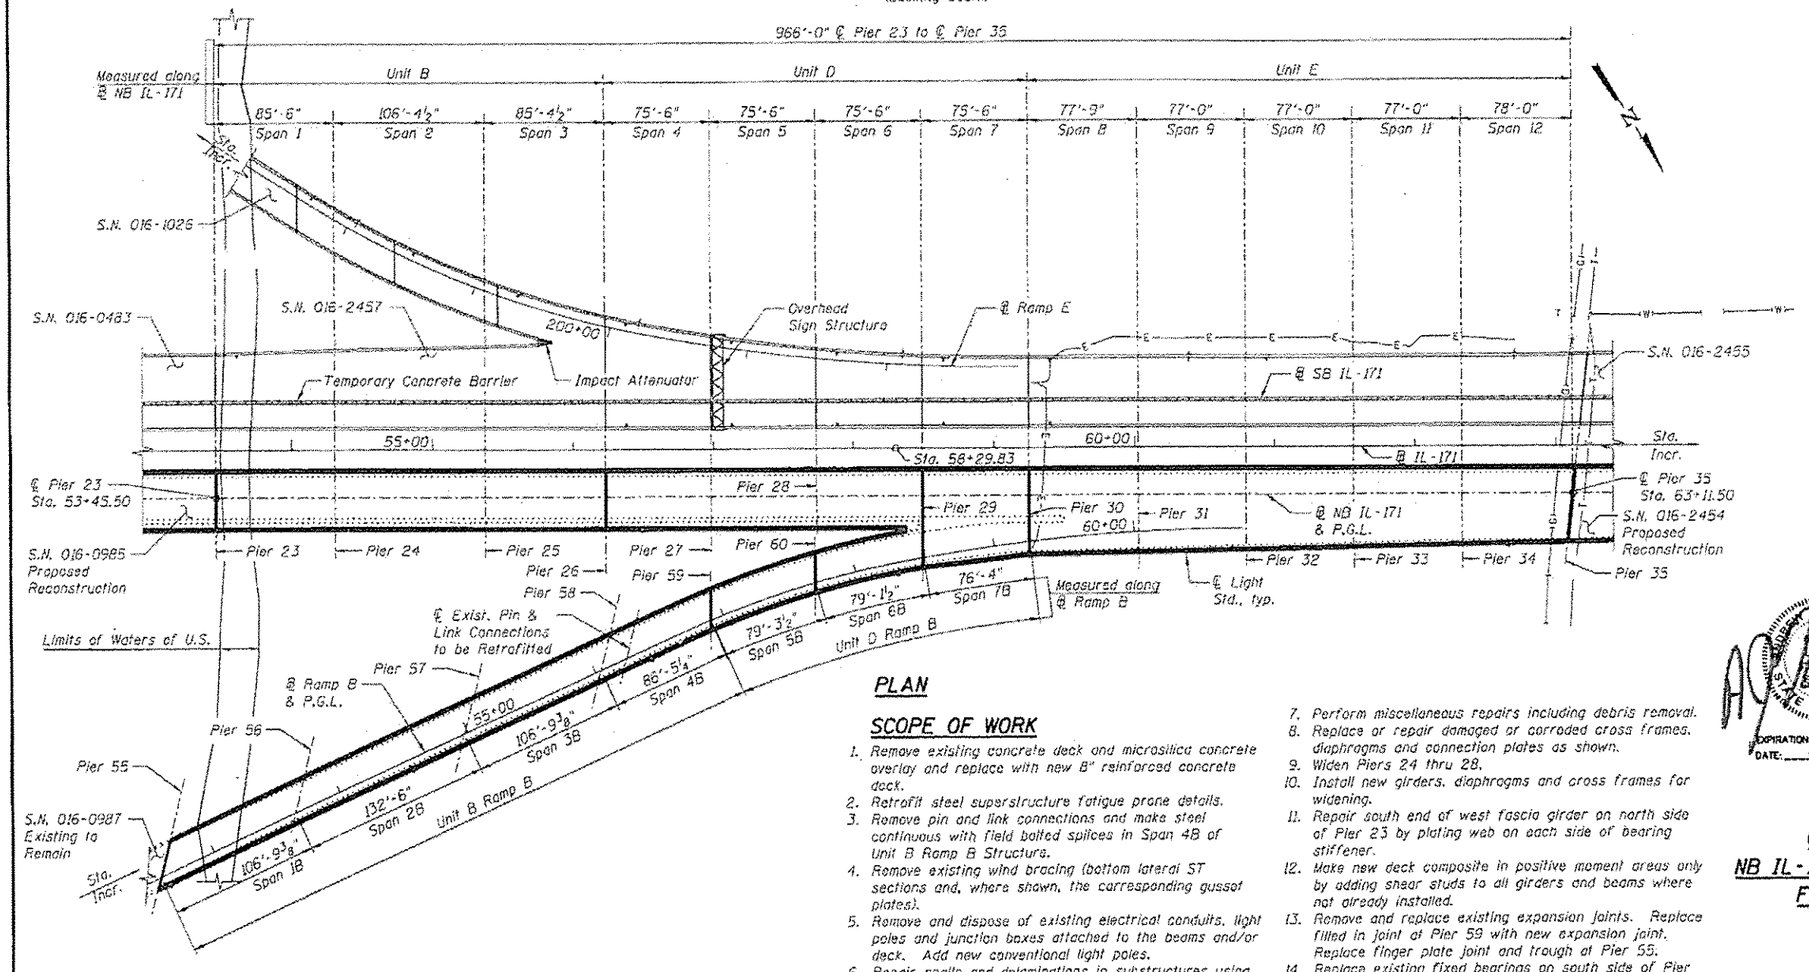
Existing Structure: S.N. 016-2456 (Northbound) was originally built in 1964 under Section 0707-675HB. The structure consists of a 5½" concrete deck with a 2" microsilica overlay. The structure consists of a twelve span mainline bridge and a six span ramp bridge (Ramp B), supported by 15 multi-column and three solid wall concrete piers (55, 56 & 57), predominantly founded on steel BP-piles with a select few on the north side of the structure supported on spread footings. The mainline structure is 966'-0" centerline of pier to centerline of pier, with an out to out deck width which varies from 36'-0" to 69'-2¼" with no skew angle (except at Pier 35). The Ramp B Structure has an out to out deck width of 28'-0", with a varying skew angle. Traffic to be maintained utilizing crossovers.

No salvage.

All elevations in the proposed plans are based on NAVD88 Datum. Elevations in the existing plans are based on the NGVD29 Datum. NGVD29 Elev. 584.50 = NAVD88 Elev. 584.22.



ELEVATION
(Looking South)



PLAN

SCOPE OF WORK

1. Remove existing concrete deck and microsilica concrete overlay and replace with new 8" reinforced concrete deck.
2. Retrofit steel superstructure fatigue prone details.
3. Remove pin and link connections and make steel continuous with field bolted splices in Span 4B of Unit B Ramp B Structure.
4. Remove existing wind bracing (bottom lateral ST sections and, where shown, the corresponding gusset plates).
5. Remove and dispose of existing electrical conduits, light poles and junction boxes attached to the beams and/or deck. Add new conventional light poles.
6. Repair spalls and delaminations in substructures using structural repair of concrete.
7. Perform miscellaneous repairs including debris removal.
8. Replace or repair damaged or corroded cross frames, diaphragms and connection plates as shown.
9. Widen Piers 24 thru 28.
10. Install new girders, diaphragms and cross frames for widening.
11. Repair south end of west fascia girder on north side of Pier 23 by plating web on each side of bearing stiffener.
12. Make new deck composite in positive moment areas only by adding shear studs to all girders and beams where not already installed.
13. Remove and replace existing expansion joints. Replace filled in joint at Pier 59 with new expansion joint. Replace finger plate joint and trough at Pier 55.
14. Replace existing fixed bearings on south side of Pier 59 with new elastomeric bearings and steel extensions.

LOADING HS20-44

No future wearing surface allowed.

6/15/2015 10:04:24 AM Y:\chicago\10000s\10093\Eng_Docs_Phase_II\SN_016_2456_2457_1st_Ave_over_Des_Plaines_River_Valley\Final\2456 Final\0162456_60W75_004_gpe.dgn

GENERAL NOTES

1. Fasteners shall be ASTM A325 Type 1, mechanically galvanized bolts. Bolts $\frac{7}{8}$" dia., holes $\frac{15}{16}$" dia., unless otherwise noted.

2. Calculated weight of structural steel =
   M270 Grade 36: 20,280 lbs.
   M270 Grade 50: 87,210 lbs.

3. No field welding is permitted except as specified in the contract documents.

4. The Contractor shall test the existing welds by non-destructive methods within 2 ft. of the end of the existing cover plates for cracks after removal of the existing concrete deck. Dye penetrant(PT), magnetic particle (MT), or other approved testing method shall be performed by qualified personnel approved by the Engineer. If cracks are found, report them to the Bureau of Bridges and Structures for disposition. The cost of testing is included in Removal of Existing Concrete Deck. The cost of crack repair, if necessary, will be paid for according to Article 109.04 of the Standard Specifications.

5. Reinforcement bars designated (E) shall be epoxy coated.

6. Prior to pouring the new concrete deck, all heavy or loose rust, loose mill scale, and other loose or potentially detrimental foreign material shall be removed from the surfaces in contact with concrete. Tightly adhered paint may remain unless otherwise noted. Removal shall be accomplished by methods that will not damage the steel and the cost will be included in the pay item covering removal of the existing concrete.

   As directed by the Engineer, existing construction accessories welded to the top flange of beams and girders shall be removed. The weld areas shall be ground flush and inspected for cracks using magnetic particle testing (MT) or dye penetrant testing (PT) by qualified personnel approved by the Engineer. Any cracks that cannot be removed by grinding $\frac{1}{4}$ in. deep shall be identified and reported to the Bureau of Bridges and Structures for further disposition. The cost of removing welded accessories, grinding and inspecting weld areas and grinding cracks will be paid for according to Article 109.04 of the Standard Specifications.

7. If the Contractor elects to use cantilever forming brackets on the exterior beams or girders, the brackets shall be placed at the same locations required for the hardwood blocks in Article 503.06(b) of the Standard Specifications. If additional cantilever forming brackets are required, hardwood blocking shall be wedged between the exterior and first interior beam at each of these additional bracket locations.

8. Plan dimensions and details relative to existing plans are subject to nominal construction variations. The Contractor shall field verify existing dimensions and details affecting new construction and make necessary approved adjustments prior to construction or ordering of materials. Such variations shall not be cause for additional compensation for a change in scope of the work; however, the Contractor will be paid for the quantity actually furnished at the unit price bid for the work.

9. Bearing seat surfaces shall be constructed or adjusted to the designated elevations within a tolerance of $\frac{1}{8}$" (0.01). Adjustment shall be made either by grinding the surface or shimming the bearings.

10. Concrete sealer shall be applied to the designated areas of Pier 26 and the new bearing seat at Pier 29.

11. The existing structural steel coating contains lead. The Contractor shall take all precautions to deal with the presence of lead on this project.

12. The Inorganic Zinc Rich Primer/Acrylic/Acrylic Paint System shall be used for shop and field painting of new structural steel and the steel portions of new elastomeric bearings. Only Inorganic Zinc Rich Primer shall be applied to the new structural steel and the steel portions of the new elastomeric bearings in the shop under this contract and is included in the respective steel or bearing pay items. The intermediate and top coats shall be applied under a separate painting contract.

13. Existing structural steel shall only be cleaned and painted as required by the Special Provision "Cleaning and Painting Contact Surface Areas of Existing Steel Structures".

14. The top flange of the existing structural steel is anticipated to have been painted with lead paint. Lead paint removal shall be completed in areas of the top flange that are to receive proposed stud shear connectors. See Special Provision for "Containment and Disposal of Lead Paint Cleaning Residues".

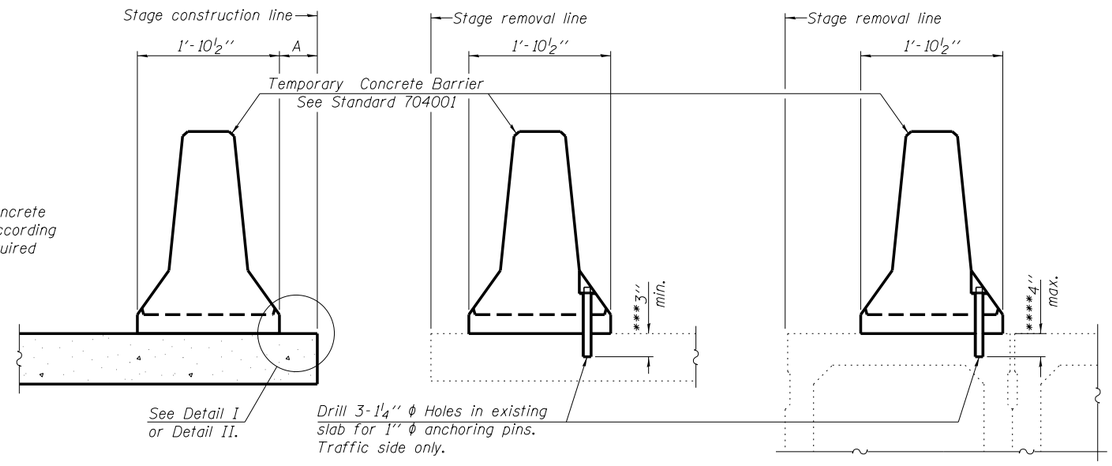
When "A" is 3'-1'' or less, the temporary concrete barrier shall be anchored to the new slab according to Detail I or Detail II. No anchorage is required when "A" is greater than 3'-1''.



NEW SLAB

EXISTING SLAB

EXISTING DECK BEAM

SECTIONS THRU SLAB OR DECK BEAM

NOTES

Detail I - With Bar Splicer or Couplers:
Connect one (1) 1'' x 7' 'x ''W'' steel PL to the top layer of couplers with 2-⅝'' ϕ bolts screwed to coupler at approximate ℄ of each barrier panel.

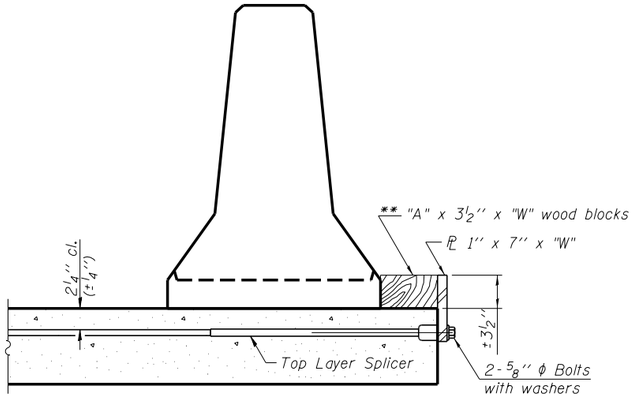
Detail II - With Extended Reinforcement Bars:
Connect one (1) 1'' x 7'' x ''W'' steel PL to the concrete slab or concrete wearing surface with 2-⅝'' ϕ Expansion Anchors or cast in place inserts spaced between the top layer of reinforcement at approximate ℄ of each barrier panel.

Cost of retainer assembly is included with Temporary Concrete Barrier.

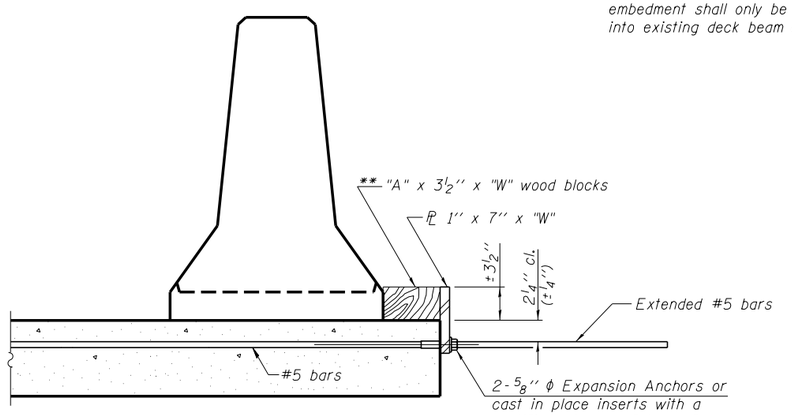
The 1'' x 7'' x ''W'' plate shall not be removed until stage II construction forms and all reinforcement bars are in place and the concrete is ready to be placed.

*** Dimension shown is minimum required embedment into concrete. If hot-mix asphalt wearing surface is present, minimum embedment shall be in addition to wearing surface depth.

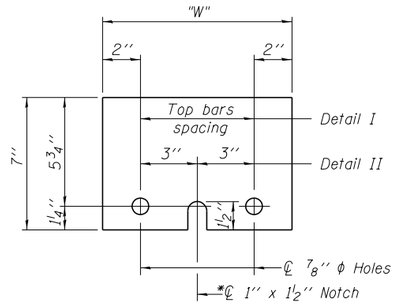
**** If existing deck beam is to remain in place after stage construction, embedment shall only be into wearing surface and not into existing deck beam concrete.



DETAIL I



DETAIL II



STEEL RETAINER PL 1'' x 7'' x ''W''

* Required only with Detail II

RETAINER ASSEMBLY

** Wood blocks may be omitted when required to provide minimum stage traffic lane width. When the wood blocks are omitted, the concrete barrier shall be in direct contact with the steel retainer plate.

PLAN - UNIT B

NOTES:

1. All screed spacing is measured along girder/beam ℄.
2. All girder/beam spacing is measured perpendicular to ℄ IL-171.
3. Contractor shall supply top of steel elevation survey data at all screed points to the Engineer for approval before beginning deck formwork operations.

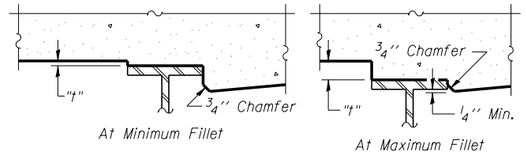
DEAD LOAD DEFLECTION DIAGRAM - MAINLINE SPANS 1-3

Girder	1A	1B	1C	2A	2B	2C	3A	3B	3C
B1	1/2"	1/2"	1/4"	3/8"	3/4"	3/8"	1/4"	1/2"	1/2"
B2-B5	1/2"	1/2"	1/4"	3/8"	5/8"	3/8"	1/4"	1/2"	1/2"
B6	1/2"	1/2"	1/4"	3/8"	3/4"	3/8"	1/4"	1/2"	1/2"

(Includes weight of concrete only.)

Note:
The above deflections are not to be used in the field if the engineer is working from the grade elevations adjusted for dead load deflections as shown on SC14 thru SC16.



To determine "t": After all structural steel has been erected, elevations of the top flanges of the beams shall be taken at intervals shown on sheets SC14 thru SC16. These elevations subtracted from the "Theoretical Grade Elevations Adjusted for Dead Load Deflection" shown herein, minus slab thickness, equals the fillet heights "t" above top flange of beams.

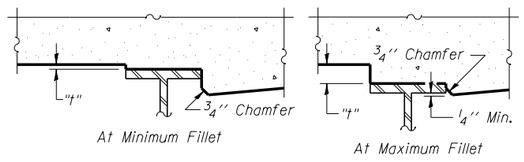
DEAD LOAD DEFLECTION DIAGRAM - UNIT B RAMP B

Girder	1A	1B	1C	2A	2B	2C	3A	3B	3C	4A	4B	4C
R1	5/8"	3/4"	1/4"	5/8"	1 1/4"	3/4"	0"	1/4"	1/8"	3/8"	3/4"	5/8"
R2	3/4"	7/8"	3/8"	3/4"	1 3/8"	7/8"	0"	1/4"	1/8"	1/2"	1"	7/8"
R3	3/4"	7/8"	1/4"	3/4"	1 3/8"	7/8"	0"	1/4"	1/8"	1/2"	1 1/8"	1"
R4	5/8"	3/4"	1/4"	3/4"	1 1/4"	7/8"	0"	1/8"	0"	5/8"	1 1/4"	1 1/8"

(Includes weight of concrete only.)

Note:
The above deflections are not to be used in the field if the engineer is working from the grade elevations adjusted for dead load deflections as shown on SC18 and SC19.



To determine "t": After all structural steel has been erected, elevations of the top flanges of the beams shall be taken at intervals shown on sheets SC18 and SC19. These elevations subtracted from the "Theoretical Grade Elevations Adjusted for Dead Load Deflection" shown herein, minus slab thickness, equals the fillet heights "t" above top flange of beams.

(Includes weight of concrete only.)

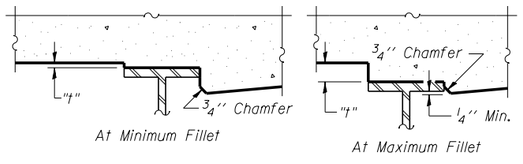
Note:
The above deflections are not to be used in the field if the engineer is working from the grade elevations adjusted for dead load deflections as shown on SC21 thru SC25.



To determine "t": Elevations of the top flanges of the beams shall be taken at intervals shown on sheets SC21 thru SC25. These elevations subtracted from the "Theoretical Grade Elevations Adjusted for Dead Load Deflection" shown herein, minus slab thickness, equals the fillet heights "t" above top flange of beams.

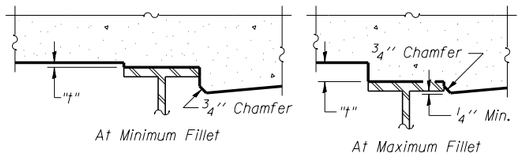
DEAD LOAD DEFLECTION DIAGRAM

(Includes weight of concrete only.)

Beam	8A	8B	8C	9A	9B	9C	10A	10B	10C	11A	11B	11C	12A	12B	12C
E1	7/8"	1 1/8"	5/8"	1/8"	3/8"	1/8"	3/8"	5/8"	3/8"	1/8"	1/4"	0"	5/8"	1 1/8"	7/8"
E2-E7	7/8"	1"	1/2"	1/8"	1/4"	1/8"	3/8"	5/8"	3/8"	1/8"	1/4"	0"	1/2"	1"	7/8"
E8	3/4"	1"	1/2"	0"	1/4"	1/8"	3/8"	5/8"	3/8"	1/8"	1/4"	1/8"	3/8"	3/4"	5/8"

Note:
The above deflections are not to be used in the field if the engineer is working from the grade elevations adjusted for dead load deflections as shown on SC27 thru SC30.



To determine "t": Elevations of the top flanges of the beams shall be taken at intervals shown on sheets SC27 thru SC30. These elevations subtracted from the "Theoretical Grade Elevations Adjusted for Dead Load Deflection" shown herein, minus slab thickness, equals the fillet heights "t" above top flange of beams.

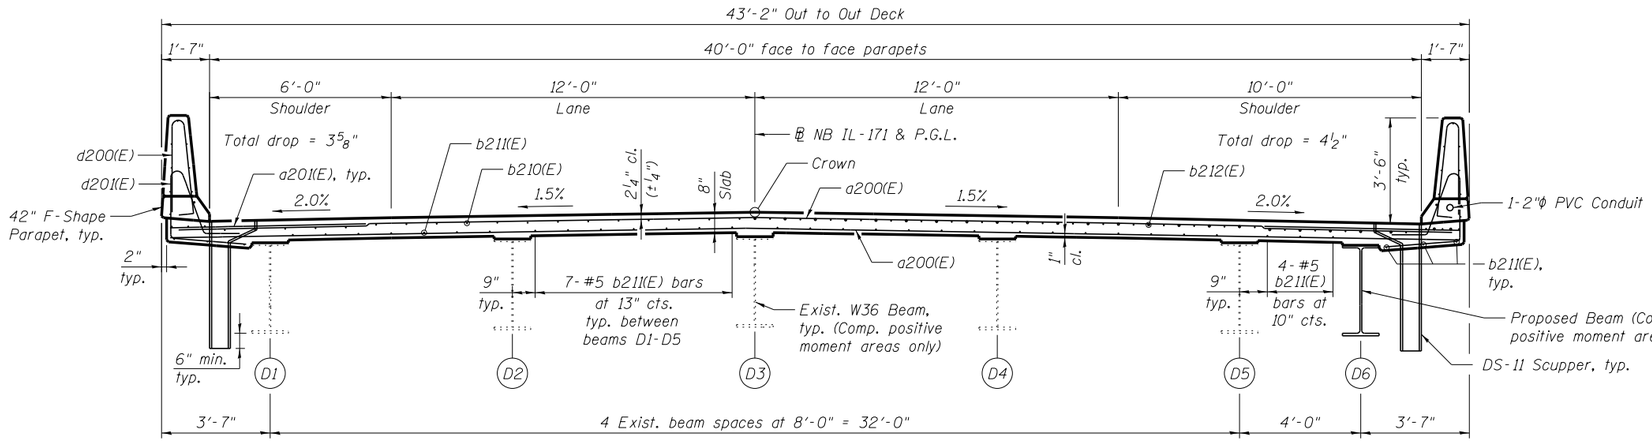
DECK CROSS SECTION C-C

(Looking Upstation, North)

MINIMUM LAP

(Slab)
#5 bar = 3'-3"
#6 bar = 3'-10"

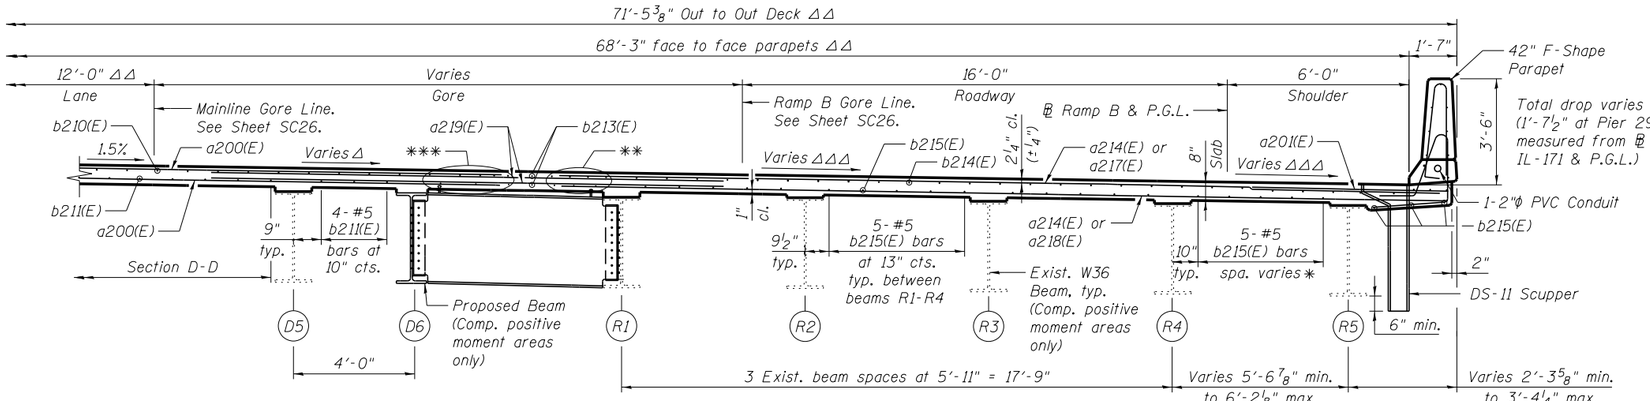
* 13½" at Pier 60
11¾" at Pier 29



NEAR MIDSPAN NEAR PIER

DECK CROSS SECTION D-D

(Looking Upstation, North)



DECK CROSS SECTION E-E

(Looking Upstation, North)

NOTES:

1. For Superstructure Details and Bar Bends, see Sheet SC45.
2. For Bill of Material, see Sheet SC46.
3. Barrier widths are measured perpendicular from the edge of deck. Overhang widths are measured perpendicular from the fascia girders. Girder spacings are measured perpendicular from the east girder to the west girder at the centerline of bearing. All remaining deck dimensions are measured perpendicular to the baseline shown unless noted otherwise.

Δ Cross slope varies in gore from Mainline Sta. 58+37.22 to Sta. 59+75.22. See Sheet SC26.

ΔΔ Measured perpendicular to ℄ NB IL-171.

ΔΔΔ See S.E. Data on Sheet SC38.

ΔΔΔΔ Linear slope transition from 6.5% at Ramp B Sta. 57+35.00 to 1.81% at Sta. 58+39.75. See Sheet SC26.

** Extend b214(E) and b215(E) bars in overhang of Ramp B beyond parapet to end of deck.

*** Extend b210(E) and b211(E) bars in overhang of Mainline beyond parapet to end of deck.

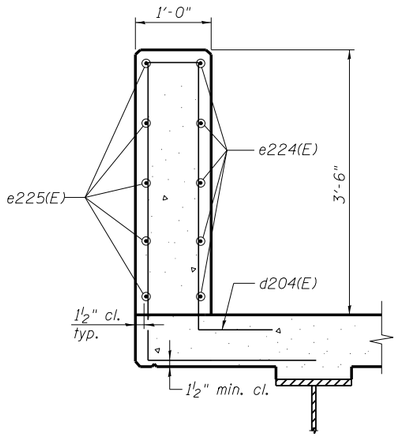
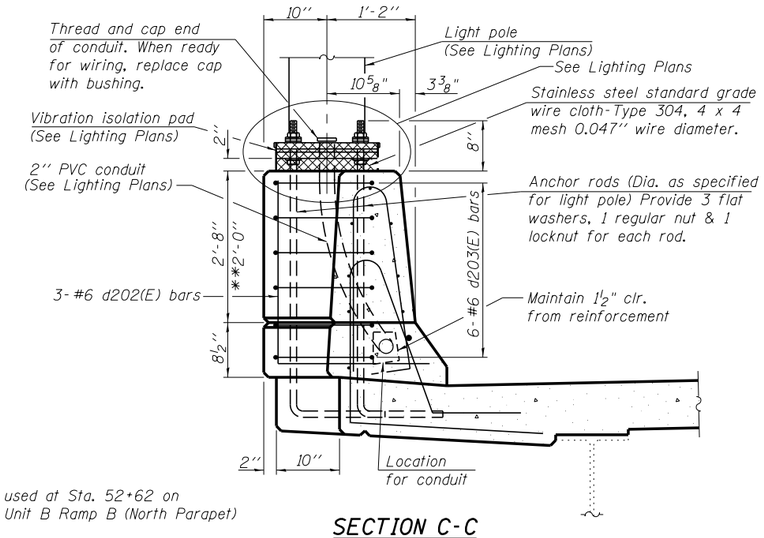
DETAIL 1

(See Sheet SC32)

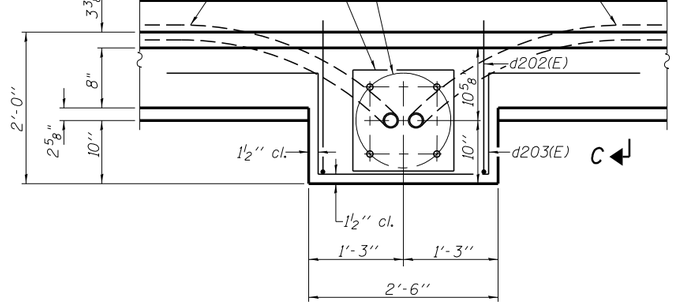


SECTION D-D

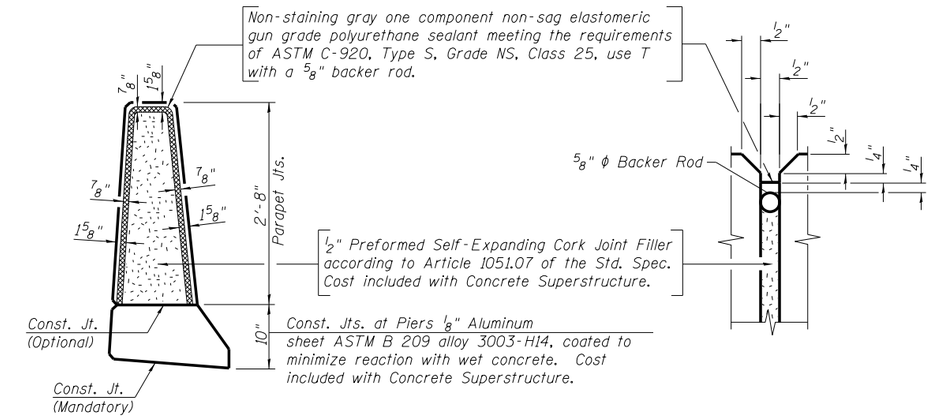


** used at Sta. 52+62 on Unit B Ramp B (North Parapet)

SECTION C-C



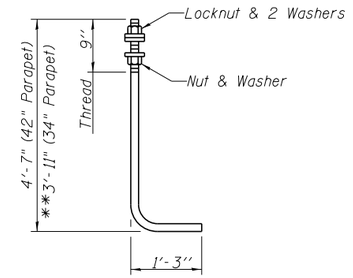
PLAN



PARAPET JOINT DETAILS

NOTE:

Cost of anchor rods is included with "Concrete Superstructure".



ANCHOR ROD

Diameter as specified for light poles.
(ASTM F 1554 Grade 105)
Full length hot dipped galvanized.

OPTIONAL DECK POUR SEQUENCE - UNIT E

NOTES:

1. When the deck pour is stopped for the day at the transverse construction joint in the deck pouring sequence shown, the next pour shall not be made until both of the following are met:
   A) At least 72 hours shall have elapsed from the end of the previous pour.
   B) The concrete strength shall have attained a minimum flexural strength of 650 psi or a minimum compressive strength of 3500 psi.
2. All dimensions are out to out.

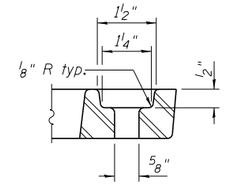
VANE GRATE DETAIL



BOLT HOLE DETAIL

Notes:

All cast iron parts shall be gray iron conforming to the requirements of AASHTO M 105, Class 35B.

Bolts, anchor studs, washers and nuts shall conform to the requirements of ASTM A 307 and shall be galvanized according to AASHTO M 232.

Downspouts located on the exterior side of a fascia beam shall be painted under a separate painting contract.

As an alternate, bolts, anchor studs, washers and nuts may be stainless steel according to Article 1006.29(d) of the Standard Specifications.

Structural steel weldments of equal sections and of the same configuration may be substituted for the cast iron scupper frame. Fillet or full penetration welds shall be used for the weldments. Details shall be submitted to the Engineer for approval. Structural steel weldments shall not be substituted for the cast iron scupper grate. Structural steel frames and downspouts shall be galvanized according to AASHTO M111.

The Contractor shall take appropriate measures to assure that Protective Coat is not applied to the scupper.

Cost of the Grate, Frame, Downspout, Anchor Studs, Bolts, Washers and Nuts including complete installation of the scupper shall be paid for at the contract unit price each for Drainage Scupper, DS-11.

Alternate fiberglass downspout conforming to ASTM D 2996 with a short-time rupture strength hoop tensile stress of 30,000 psi min. may be used in lieu of the cast iron or steel equivalent.

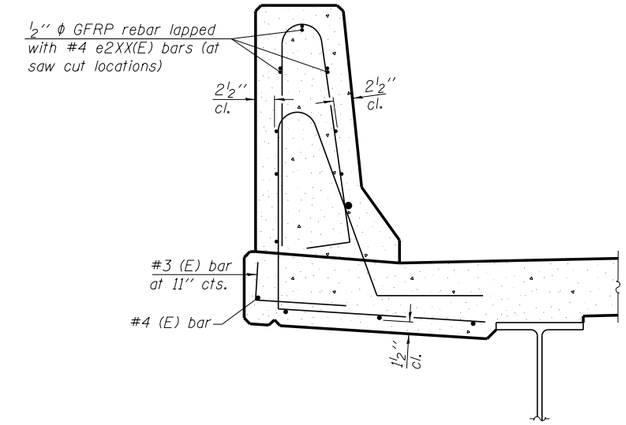
34" F SHAPE PARAPET SECTION

(Showing dimensions)



SECTION

(34" parapet shown - 42" parapet similar)
(Showing reinforcement clearances for slip forming and additional reinforcement bars)

GENERAL NOTES

All dimensions shall remain the same as shown on superstructure details, except dimensions A and B which are to be revised as shown to provide additional clearance. Additional concrete needed to revise dimension A and B = 0.0165 cu. yds./ft. for 34" parapet or = 0.0223 cu. yds./ft. for 42" parapet.

Place aluminum sheet in curb portion at and near piers. Full thickness saw cut at all joint locations in lieu of cork joint filler.

Steel superstructure shown. Other superstructure types similar.

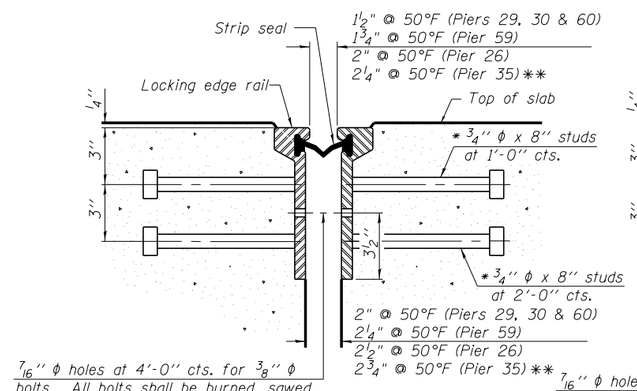
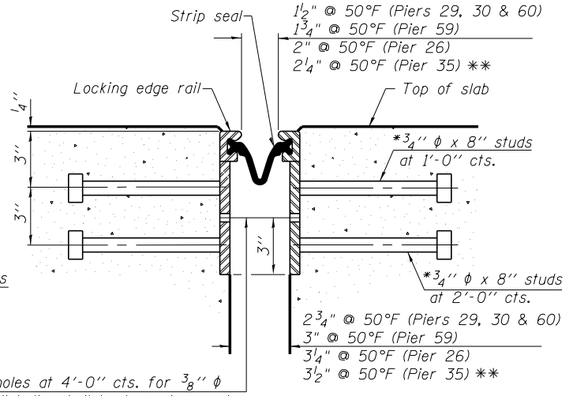
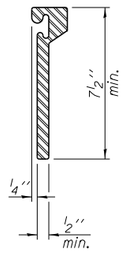
TRIMETRIC VIEW
(Showing back plates only)



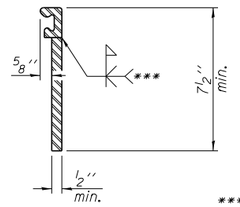
SECTION THRU ROLLED RAIL JOINT



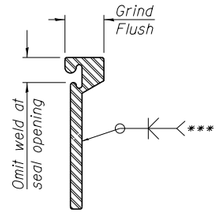
SECTION THRU WELDED RAIL JOINT



ROLLED EXTRUDED RAIL



WELDED RAIL



*** Back gouge not required if complete joint penetration is verified by mock-up.

LOCKING EDGE RAIL SPLICE

The inside of the locking edge rail groove shall be free of weld residue.

Rolled rail shown, welded rail similar.

LOCKING EDGE RAILS

Notes:

At Pier 35, the strip seal shall be installed when the temperature is between 30°F and 90°F.

The strip seal shall be made continuous and shall have a minimum thickness of 1/4". The configuration of the strip seal shall match the configuration of the Locking Edge Rails. Open or "webbed" strip seal gland configurations are not permitted. The gland shall be sized for a maximum rated movement of 4 inches.

The Locking Edge Rails depicted are conceptual only, except for the minimum dimensions shown. The actual configuration of the Locking Edge Rails and matching strip seal may vary from manufacturer to manufacturer. Flanged edge rails will not be allowed. Locking Edge Rails may be spliced at slope discontinuities.

The manufacturer's recommended installation methods shall be followed.

The joint opening and deck dimensions detailed on the superstructure are based on a rolled rail expansion joint. If the Contractor elects to use the welded rail expansion joint, the opening and deck dimensions shall be modified according to the dimensions detailed on this sheet. Required modifications shall be made at no additional cost to the State.

All steel components shall be galvanized after fabrication according to Article 520.03 of the Standard Specifications.

Maximum space between rail segments shall be 3/16", sealed with a suitable sealant. Joints in rails within 10 ft. of curbs shall be welded.

Parapet plates and anchorage studs for skews > 30° included in the cost of Preformed Joint Strip Seal.

BILL OF MATERIAL

Item	Unit	Total
Preformed Joint Strip Seal	Foot	233.5

** Preformed Joint Strip Seal for Pier 35 billed with SN 016-2454.

* Granular or solid flux filled headed studs conforming to Article 1006.32 of the Std. Specs., automatically end welded.

For fabricator use only.

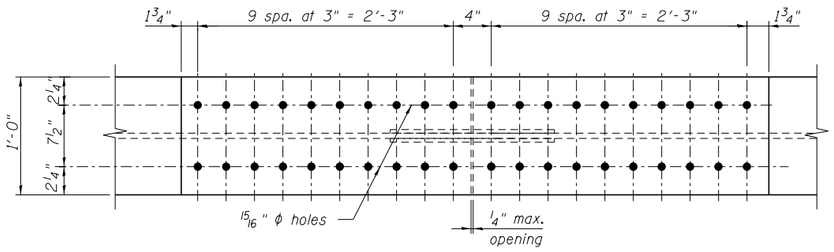
UNIT B FLANGE SPLICE #1 & #2

(Top & Bottom Flanges)
(20 Bolts per Flange Splice)



UNIT D FLANGE SPLICE #1 THRU #4

(Top & Bottom Flanges)
(40 Bolts per Flange Splice)

NOTES:

1. All Splice Plates shall be AASHTO M270 Grade 50 steel.
2. All Splice Bolts shall be 7/8" ϕ ASTM A325 High Strength with 15/16" ϕ holes.
3. Load carrying components designated "NTR" shall conform to the Impact Testing Requirements, Zone 2.
4. Girder B6 and Beam D6 do not have any camber.

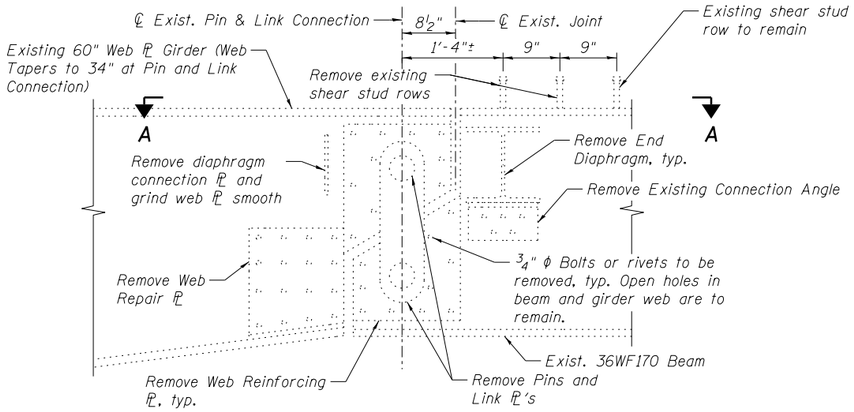
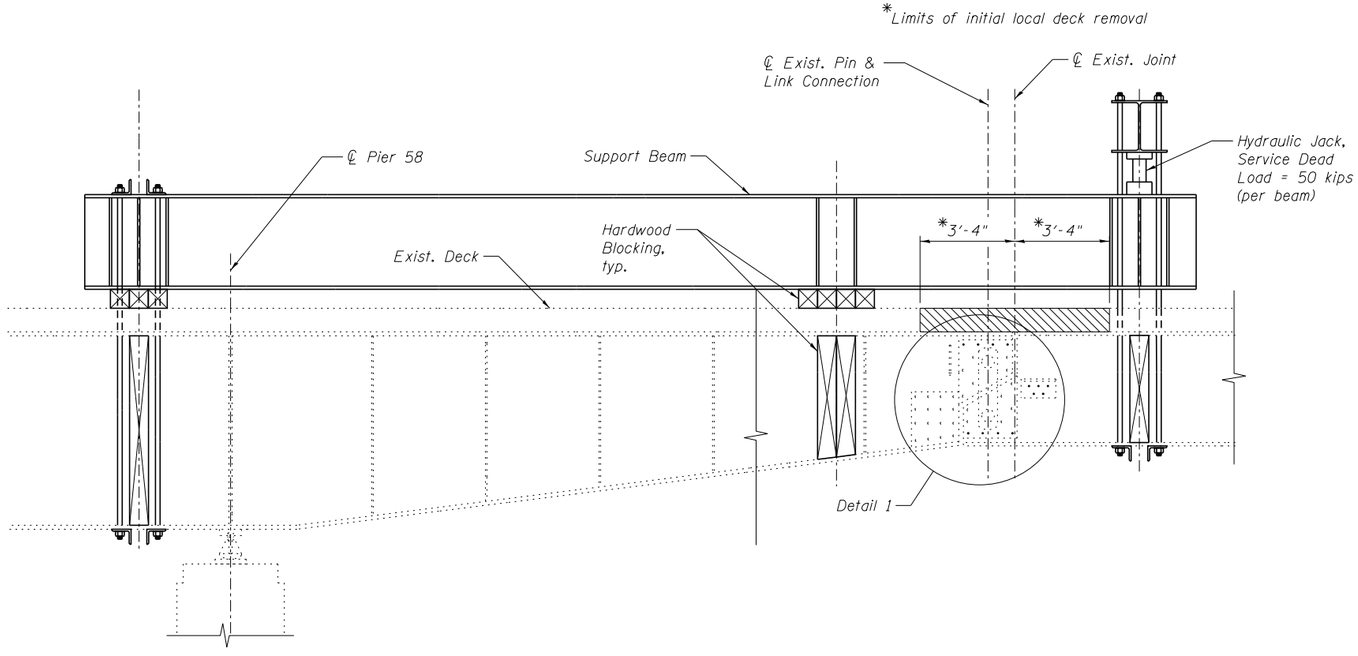
SECTION A-A



DETAIL 1



SUGGESTED TEMPORARY BEAM SUPPORT SYSTEM IN SPAN 4B OF UNIT B RAMP B

Note: Specific details of the Temporary Support System shall be submitted by the Contractor for review and approval by the Engineer.

SUGGESTED FIELD SPLICE PLATE FABRICATION AND INSTALLATION PROCEDURE

1. All dimensions shall be verified in the field prior to fabrication. The dimensions shall be verified with measurements from the ends of the plate girder and the W36 beam, and all existing bolt hole locations shall be located and measured. The Contractor shall also measure the gap between the plate girder and beam at the top and bottom flanges and record the temperature at the time of measurement. This data shall be submitted along with the shop drawings.
2. Plates shall be fabricated and bolt holes shall be shop drilled based on the dimensions measured in the field. The length and width of the plates as well as any bolt spacings that cross the gap between the girders may require adjustment if the measured gap varies from $1\frac{1}{2}$".
3. Splice and fill plates shall be attached to the existing plate girder side using existing bolt holes and $\frac{3}{4}$"ϕ erection bolts to match the existing holes. Flange splices may be clamped in place at this time also.
4. New bolt hole locations shall be field drilled in the existing plate girder using the shop drilled holes in the splice plates as a template.
5. After bolts are installed at new hole locations, the $\frac{3}{4}$"ϕ erection bolts can be removed and the existing hole locations shall be reamed to allow for the installation of the remaining proposed $\frac{7}{8}$"ϕ bolts on the plate girder side.
6. On the W36 side, ream existing holes to be re-used in the W36 webs and install $\frac{7}{8}$"ϕ bolts.
7. Field drill all remaining new holes in the W36 webs on the W36 side of the splice using the shop drilled holes in the splice plates as a template and install $\frac{7}{8}$"ϕ bolts.

SUGGESTED PROCEDURE FOR PIN AND LINK RETROFIT IN SPAN 4B OF UNIT B RAMP B

1. Perform local concrete deck removal above Exist. Pin & Link Connection.
2. Erect Temporary Beam Support System, installing all rods, beams and blocking.
3. Remove the Exist. Pin & Link Connection along with associated shear studs, plates and diaphragms as shown in Detail 1.
4. Install proposed bolted splices as detailed on Sheet SC63.
5. Remove Temporary Beam Support System.

BILL OF MATERIAL

ITEM	UNIT	TOTAL
Structural Steel Removal	Pound	5,720
Temporary Support System	Each	4

NOTES:

1. The work required to remove all existing components of the pin & link connection and diaphragms at the existing joint shall be paid for as "Structual Steel Removal".
2. Cost of reaming and field drilling included in "Furnishing and Erecting Structural Steel".

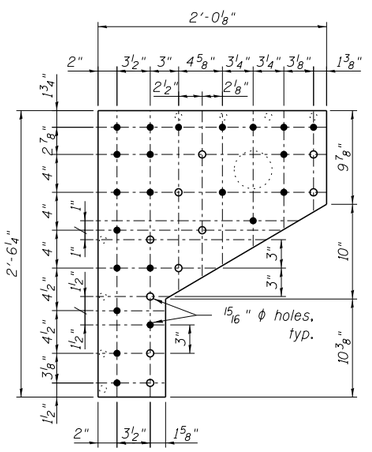
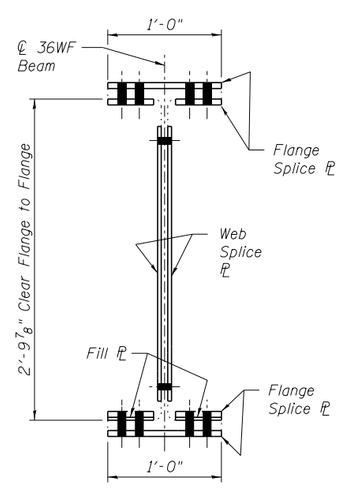
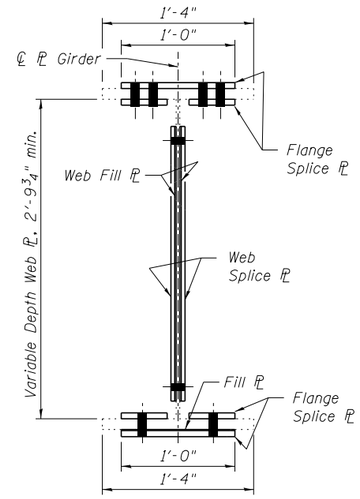
WEB SPLICE PLATE DETAIL



WEB FILL PLATE DETAIL



SECTION A-A



SECTION B-B

** C15x50 is permitted as an alternate channel. Calculated weight of structural steel is based on the C15x40. If C15x50 is used, it shall be provided at no extra cost to the Department.

NOTES:

1. All new plates and bolts for these Field Splices shall be paid for as "Furnishing and Erecting Structural Steel".
2. All Splice Plates shall be AASHTO M270 Grade 50 steel.
3. All Splice Bolts shall be $\frac{7}{8}$" ϕ High Strength ASTM A325 Type 1, mechanically galvanized with $\frac{15}{16}$" ϕ holes.
4. Load carrying components designated "NTR" shall conform to the Impact Testing Requirement, Zone 2.
5. Cost of field drilling included in "Furnishing and Erecting Structural Steel".
6. All diaphragm bolts shall be ASTM A325 Type 1, mechanically galvanized $\frac{3}{4}$" ϕ bolts with $\frac{15}{16}$" ϕ holes. Two hardened washers required for each set of oversized holes.
7. The Contractor is responsible for verifying all dimensions of the existing bolt hole configuration before fabrication of the Splice Plates.
8. For details of existing pin and link connection removal, see Sheet SC62.
9. For Span 4B partial framing plan, see Sheet SC61.
10. After removal of existing web repair ℙ's, the area around the existing cracks and arrestor holes shall be inspected using magnetic particle testing (MT) or dye penetrant testing (PT) by qualified personnel approved by the Engineer. Any additional cracking shall be identified and reported to the Bureau of Bridges and Structures for further disposition. The cost of inspecting and testing the existing webs shall be included with the cost of "Furnishing and Erecting Structural Steel".
11. Exact location of diaphragms may be adjusted in the field to miss the existing stiffeners on the ℙ girder, typ.
12. For additional notes regarding field measurement of existing dimensions and suggested fabrication and installation procedure for the proposed plates, see Sheet SC62.

M_I: Un-factored moment due to impact (kip-ft.).
M_a: Factored design moment (kip-ft.).
$1.3\ [M_D + M_{sD} + \frac{5}{3}(M_L + M_I)]$
M_u: Compact composite moment capacity according to AASHTO LFD 10.50.1.1 or compact non-composite moment capacity according to AASHTO LFD 10.48.1 (kip-ft.).
f_s (Overload): Sum of stresses as computed from the moments below (ksi).
$M_D + M_{sD} + \frac{5}{3}(M_L + M_I)$
f_s (Total): Sum of stresses as computed from the moments below on non-compact section (ksi).
$1.3\ [M_D + M_{sD} + \frac{5}{3}(M_L + M_I)]$
VR: Maximum M_L + impact shear range within the composite portion of the span for stud shear connector design (kips).

I_s, S_s: Non-composite moment of inertia and section modulus of the steel section used for computing f_s(Total and Overload) due to non-composite dead loads ($in.^4$ and $in.^3$).
$I_c(n)$, $S_c(n)$: Composite moment of inertia and section modulus of the steel and deck based upon the modular ratio, "n", used for computing f_s(Total and Overload) due to short-term composite live loads ($in.^4$ and $in.^3$).
$I_c(3n)$, $S_c(3n)$: Composite moment of inertia and section modulus of the steel and deck based upon 3 times the modular ratio, "3n", used for computing f_s(Total and Overload) due to long-term composite (superimposed) dead loads ($in.^4$ and $in.^3$).
Z: Plastic Section Modulus of the steel section in non-composite areas ($in.^3$).
$\mathcal{Q}$: Un-factored non-composite dead load (kips/ft.).
$M\mathcal{Q}$: Un-factored moment due to non-composite dead load (kip-ft.).
$s\mathcal{Q}$: Un-factored long-term composite (superimposed) dead load (kips/ft.)
$M_s\mathcal{Q}$: Un-factored moment due to long-term composite (superimposed) dead load (kip-ft.).
M_L: Un-factored live load moment (kip-ft.).
M_I: Un-factored moment due to impact (kip-ft.).
M_a: Factored design moment (kip-ft.). $1.3\,[M\mathcal{Q} + M_s\mathcal{Q} + \frac{5}{3}(M_L + M_I)]$
M_u: Compact composite moment capacity according to AASHTO LFD 10.50.1.1 or compact non-composite moment capacity according to AASHTO LFD 10.48.1 (kip-ft.).
f_s (Overload): Sum of stresses as computed from the moments below (ksi). $M\mathcal{Q} + M_s\mathcal{Q} + \frac{5}{3}(M_L + M_I)$
f_s (Total): Sum of stresses as computed from the moments below on non-compact section (ksi). $1.3\,[M\mathcal{Q} + M_s\mathcal{Q} + \frac{5}{3}(M_L + M_I)]$
VR: Maximum M_L + impact shear range within the composite portion of the span for stud shear connector design (kips).

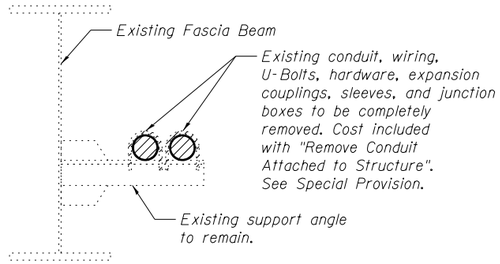
SECTION A-A

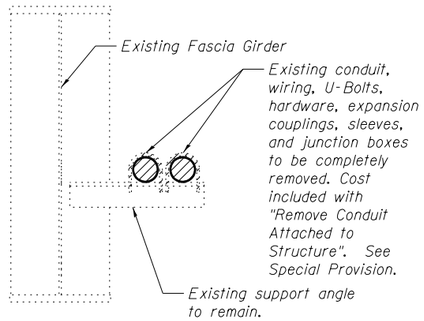
(Bottom shown, Top similar)

*See table. Fill ℙ thickness must match existing cover ℙ thickness. Contractor to field verify thickness prior to ordering new materials.



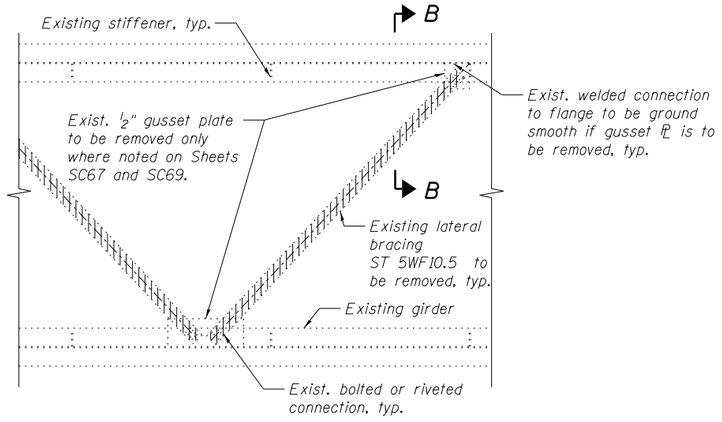
CONDUIT REMOVAL DETAIL

(Wide Flange Detail)



CONDUIT REMOVAL DETAIL

(Plate Girder Detail)



WIND BRACING REMOVAL

(Removal of lateral bracing and gusset plates paid for as "Structural Steel Removal")
(60 angles to be removed)
(24 gusset ℙ's to be removed)

NOTES:

1. See Sheets SC68 and SC70 for locations of cover plate retrofits.
2. Cost of furnishing all labor, equipment, and materials necessary to furnish and install the cover plate retrofit detail shall be included with "Structural Steel Repair". See Special Provision. "Structural Steel Repair" weight billed below is calculated based on gross section of plate with voids for bolts holes not accounted for.
3. Load carrying components designated "NTR" shall conform to the Impact Testing Requirement, Zone 2.
4. Structural Steel Plates for cover plate retrofit shall conform to the requirements of AASHTO M270 Grade 50.
5. Cost of field drilling included with "Structural Steel Repair".

BILL OF MATERIAL

(No. of Locations = 1)

EXISTING END CROSS FRAME REMOVAL DETAIL

(No. of Locations = 1)

CROSS FRAME REPLACEMENT NOTES:

1. New 3/4" dia. fasteners shall be ASTM A325 Type 1, mechanically galvanized bolts. Field drill holes in new steel using holes in existing stiffener as a template. Contractor to field verify location, size and spacing of existing holes prior to ordering new materials. Cost included with "Furnishing and Erecting Structural Steel".
2. See Sheet SC67 for location of cross frame removal and replacements.

GIRDER END REPAIR NOTES:

1. See Sheets SC67 and SC69 for locations of girder end repair.
2. Bolts for girder end repair shall be 3/4"ϕ, ASTM A325 Type 1, mechanically galvanized, in 13/16"ϕ holes. Holes in new angles shall be shop drilled. Holes in the existing web and bearing stiffeners shall be field drilled using the holes from the new angles as a template. Cost of field drilling included with "Furnishing and Erecting Structural Steel".
3. Bolts for girder end repair shall be 3/4"ϕ, ASTM A325 Type 1, mechanically galvanized, in 13/16"ϕ holes. Holes in new angle legs connecting to existing steel shall be shop drilled unless noted otherwise. Holes in the new angle legs in locations where existing gusset plate holes or existing angle holes (at Girder R4) overlap with the new angle leg shall be field drilled using the existing holes as a template. New holes in existing steel shall be field drilled using the shop drilled angles holes as template. Cost of field drilling included with "Furnishing and Erecting Structural Steel".
4. For Views B-B, C-C and C'-C' see Sheet SC73.

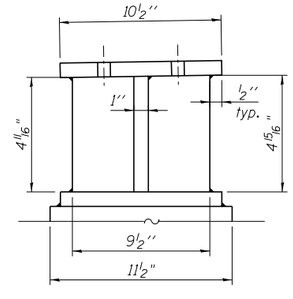
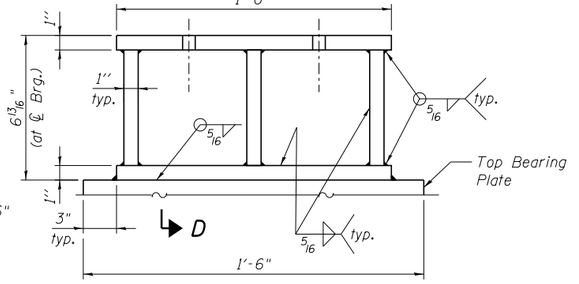
SECTION THRU PTFE

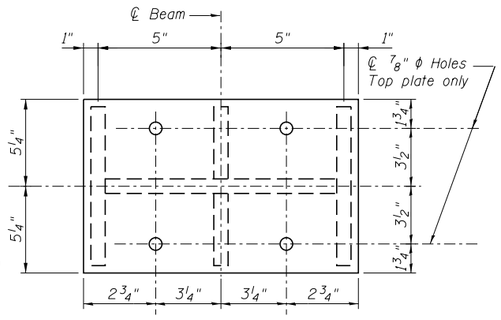


SECTION D-D



ELEVATION STEEL EXTENSION

(Weight included with Furnishing and Erecting Structural Steel.)



PLAN STEEL EXTENSION

Prior to ordering any material, Contractor shall verify in the field all bearing height and shim thickness dimensions.

Notes:

Two ⅛" adjusting shims shall be provided for each bearing in addition to all other plates or shims and placed as shown on bearing details.

Anchor bolts shall be ASTM F1554 all-thread (or an Engineer-approved alternate material) of the grade(s) and diameter(s) specified. The corresponding specified grade of AASHTO M314 anchor bolts may be used in lieu of ASTM F1554.

Anchor bolts for Type II bearings shall be placed in holes drilled in the concrete through holes in the bottom bearing plate after members are in place. Side retainers shall be placed after bolts are installed.

Drilled and set anchor bolts shall be installed according to Article 521.06 of the Standard Specifications.

Side retainers and other steel members required for the elastomeric bearing assembly shall be included in the cost of Elastomeric Bearing Assembly, Type II.

The ⅛" PTFE sheet shall be bonded directly to the top steel plate with a two-component, medium viscosity epoxy resin, conforming to the requirements of the Federal Specification MMM-A-134, Type I. The bond agent shall be applied on the full area of the contact surfaces.

Bonding of ⅛" PTFE sheet during vulcanizing process will be permitted provided the process and method of adjusting assembly height is approved by the Engineer.

The structural steel plates of the bearing assemblies and the steel extensions shall meet the requirements of AASHTO M270 Grade 50.

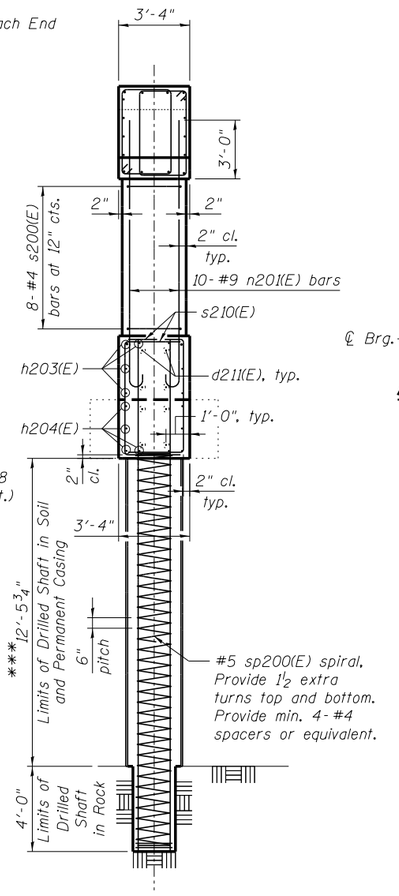
SECTION E-E

(Shaft in rock)



END VIEW

*** The quantities and reinforcement detailing are based on the top of shaft and the estimated top of rock elevations shown and may change based on the actual top of rock encountered at each shaft and the final top of shaft elevation. Contractor is responsible for determining the casing thickness and the actual tip elevation to be used. See Article 516.06(d) of the Standard Specifications. Pay limits of the Permanent Casing are based on the minimum length shown.

NOTES:

1. Space reinforcement to miss anchor bolts.
2. Pour steps monolithically with cap.
3. For drilled shaft layout and location, see Sheet SC6.
