NOTES:

1. REMOVE EXISTING SURVEILLANCE EQUIPMENT (SALVAGE) WHERE NOTED AND TURN OVER TO IDOT DISTRICT 1. THIS WORK WILL NOT BE PAID FOR SEPARATELY AND WILL BE INCLUDED IN THE COST OF THE "REMOVE EXISTING TRAFFIC SURVEILLANCE EQUIPMENT" PAY ITEM.
2. ALL EXISTING EQUIPMENT ATTACHED TO OR PART OF AN EXISTING STRUCTURE TO BE DEMOLISHED SHALL BE REMOVED AS PART OF THE STRUCTURAL REMOVAL PAY ITEMS, UNLESS OTHERWISE NOTED.
3. EXISTING I-290 WB RAMP LOOPS, CONDUITS AND CABLES ARE TO BE PROTECTED AND MAINTAINED FOR RECONNECTION.
4. MAINTAIN THE EXISTING IDOT ITS SYSTEMS THAT WILL BE AFFECTED BY THE CONSTRUCTION WORK. THIS ITS MAINTENANCE WORK SHALL BE INCLUDED IN THE COST OF THE "MAINTAINING ITS DURING CONSTRUCTION" PAY ITEM.
5. MAINTAIN EXISTING CCTV CAMERA POWER AND COMMUNICATIONS UNTIL TEMPORARY AND NEW INFRASTRUCTURE CAN BE INSTALLED. POWER AND COMMUNICATIONS FOR THE 100-FT POLE MOUNTED CCTV CAMERAS NEXT TO PS 5 ARE TO BE MAINTAINED AND WILL NOT BE REMOVED OR REPLACED.
6. THE 48 SMFO CABLE IN THE EB MEDIAN WALL IS TO BE ABANDONED WHEN THE REPLACEMENT 96 SMFO CABLE IN THE WB MEDIAN WALL BETWEEN PS 5 AND THE COMM. HUT IS INSTALLED.
7. THE 24 SMF CABLE, AND THE ELECTRIC CABLE NO. 6 2/C AND NO. 8 GOING TO THE EXISTING CCTV CAMERAS, AND THE EXISTING 48 SMF CABLE ARE TO BE MAINTAINED UNTIL NEW CABLES ARE TO BE INSTALLED. OTHER CABLES SHARING THE CONDUITS ARE TO REMAIN AND TO BE MAINTAINED. THESE ARE THE 12 SMF CABLE AND THE ELECTRIC CABLE NO. 6 2/C AND NO. 8 GOING TO THE CAMERA AT PS 5.
8. SEE THE SPECIAL PROVISION FOR CONTINUATION OF EX. OFF-SITE CAMERAS UNDER "BUDGETARY ALLOWANCE FOR TIME-LAPSE CAMERA".
9. LOCATIONS OF EX. IDOT ELECTRICAL/ITS EQUIPMENT SHOWN ON THIS SHEET ARE APPROXIMATIONS AND MUST BE VERIFIED IN THE FIELD BY THE CONTRACTOR.
10. RELOCATE CAMERA IKOE TO THE TEMPORARY WOOD POLE ON CONGRESS PARKWAY. RELOCATE CAMERA IKOF TO THE TEMPORARY WOOD POLE ON TILDEN STREET. THIS WORK WILL BE COVERED UNDER THE "RELOCATE EXISTING CCTV CAMERA" PAY ITEM. REFER TO IDOT STANDARD DRAWING BE801 FOR AERIAL CABLE INSTALLATION.

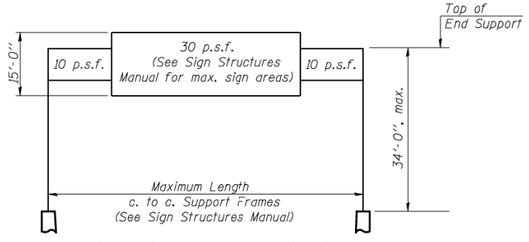
TYPICAL PLAN
(Interior diagonals not shown)

TYPICAL ELEVATION
(Looking West at Face of Signs)

Elev. A = Elevation at point of minimum clearance to sign, walkway support or truss.



DESIGN WIND LOADING DIAGRAM

Parameters shown are basis for I.D.O.T. Standards and Sign Manual Tables. Installations not within dimensional limits shown require special analysis for all components.

Structure Number	Station	Design Truss Type	c. to c. Supports	Elev. A	Dim. D at Left Support	Dim. D at Right Support	Height of Tallest Sign	Total Sign Area
150161290L000.0-002	5206+12.43 (Interim Location)	III-A	81'-1"	612.41	2'-2½"	2'-3"	15'-0"	672 SQ FT
	5209+18.43 (Final Location**)	III-A	81'-1"	612.83	2'-2½"	2'-3"	15'-0"	693 SQ FT

* If M270 Gr. 50W (M222) steel is proposed, chemistry for plate to be used shall first be approved by the Engineer as suitable for galvanizing and welding.

** Final location and other miscellaneous data provided for information only. Sign structure to be relocated in future contract (by others).

GENERAL NOTES

DESIGN: AASHTO Standard Specifications for Structural Supports for Highway Signs, Luminaires and Traffic Signals. ("AASHTO Specifications")

CONSTRUCTION: Current (at time of letting) Illinois Department of Transportation Standard Specifications for Road and Bridge Construction, Supplemental Specifications and Special Provisions. ("Standard Specifications")

LOADING: 90 M.P.H. WIND VELOCITY

DESIGN STRESSES:
Field Units
f'c = 3,500 p.s.i.
fy = 60,000 p.s.i. (reinforcement)

WELDING: All welds to be continuous unless otherwise shown. All welding to be done in accordance with current AWS D1.1 and D1.2 Structural Welding Codes (Steel and Aluminum) and the Standard Specificiations.

MATERIALS: Aluminum Alloys as shown throughout plans. All Structural Steel Pipe shall be ASTM A53 Grade B or A500 Grade B or C. If A500 pipe is substituted for A53, then the outside diameter shall be as detailed and wall thickness greater than or equal to A53. All Structural Steel Plates and Shapes shall conform to AASHTO M270 Gr. 36, Gr. 50 or Gr. 50W*. Stainless steel for shims, sleeves and handhole covers shall be ASTM A240, Type 302 or 304, or another alloy suitable for exterior exposure and acceptable to the Engineer.
The steel pipe and stiffening ribs at the base plate for the column shall have a minimum longitudinal Charpy V-Notch (CVN) energy of 15 lb.-ft. at 40° F. (Zone 2) before galvanizing.

FASTENERS FOR ALUMINUM TRUSSES: All bolts noted as "high strength" must satisfy the requirements of AASHTO M164 (ASTM A325), or approved alternate, and must have matching locx nuts. Threaded studs for splices (if Members interfere) must satisfy the requirements of ASTM A449, ASTM A193, Grade B7, or approved alternate, and must have matching lock nuts. Bolts and lock nuts not required to be high strength must satisfy the requirements of ASTM A307. All bolts and lock nuts must be hot dip galvanized per AASHTO M232. The lock nuts must have nylon or steel inserts. A stainless steel flat washer conforming to ASTM A240 Type 302 or 304, is required under both head and nut or under both nuts where threaded studs are used. High strength bolt installation shall conform to Article 505.04 (f) (2)d of the IDOT Standard Specifications for Road and Bridge Construction. Rotational capacity ("ROCAP") testing of bolts will not be required.

U-BOLTS AND EYEBOLTS: U-Bolts and Eyebolts must be produced from ASTM A276 Type 304, 304L, 316 or 316L, Condition A, cold finished stainless steel, or an equivalent material acceptable to the Engineer. All nuts for U-Bolts and Eyebolts must be lock nuts equivalent to ASTM A307 with nylon or steel inserts and hot dip galvanized per AASHTO M232. A stainless steel flat washer conforming to ASTM A240, Type 302 or 304, is required under each U-Bolt and Eyebolt lock nut.

GALVANIZING: All Steel Grating, Plates, Anchor Rods, Shapes and Pipe shall be Hot Dip Galvanized after fabrication in accordance with AASHTO M111. Painting is not permitted.

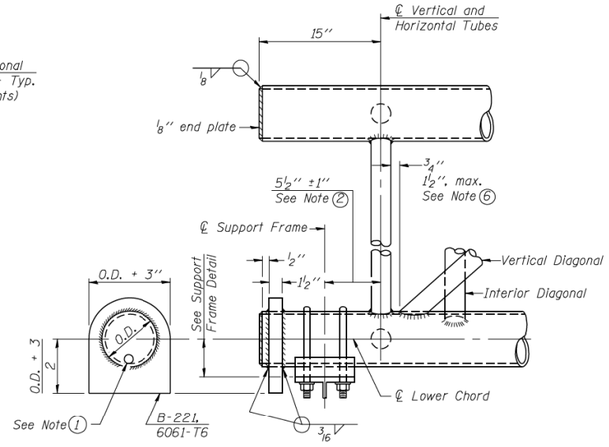
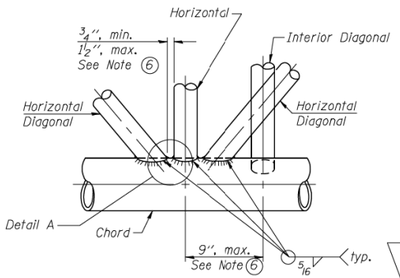
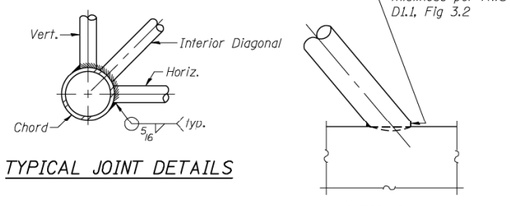
ELEVATION
TYPICAL INTERIOR UNIT
Even number of panels/interior unit required.



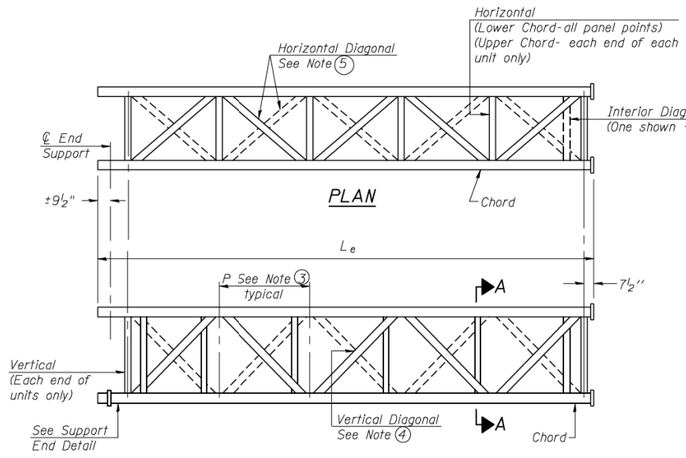
SUPPORT END DETAIL FOR EXTERIOR UNIT



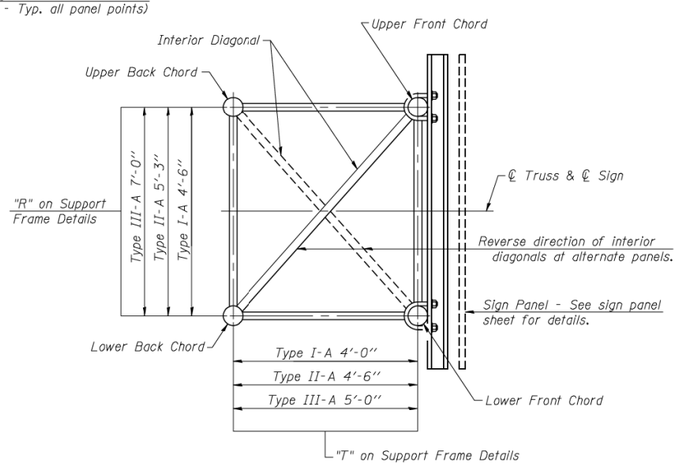
TYPICAL JOINT DETAILS



DETAIL A



ELEVATION
TYPICAL EXTERIOR UNIT
Even or odd number of panels/exterior units allowed.



SECTION A-A

1. Contractor may alternatively use standard aluminum drive-fit cap to close end. ½" ϕ drain hole in end plate/drive-fit cap. (Typ. at ends of all chords)
2. 5½" end dimension may vary by ±1" to provide uniform panel spacing (P).
3. Panel spacing (P) shall be uniform for entire truss and between 4'-0" and 5'-0" for Type I-A or 4'-0" and 5'-6" for Types II-A and III-A.
4. Vertical Diagonals in front and back face shall alternate.
5. Hidden lines show wind bracing alternates direction between planes of top and bottom chords.
6. All diagonals shall be detailed for minimum offset from the panel point based on the following: Offset shall be such as to provide a ¾" minimum to 1½" maximum clearance between any diagonal and any horizontal or vertical member, and to provide clearance for U-bolt connections of signs or walkway brackets.

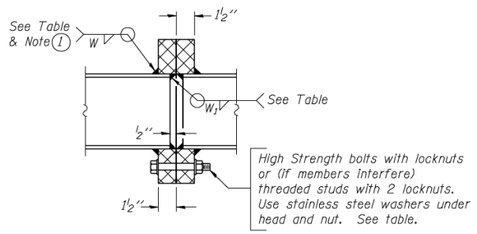
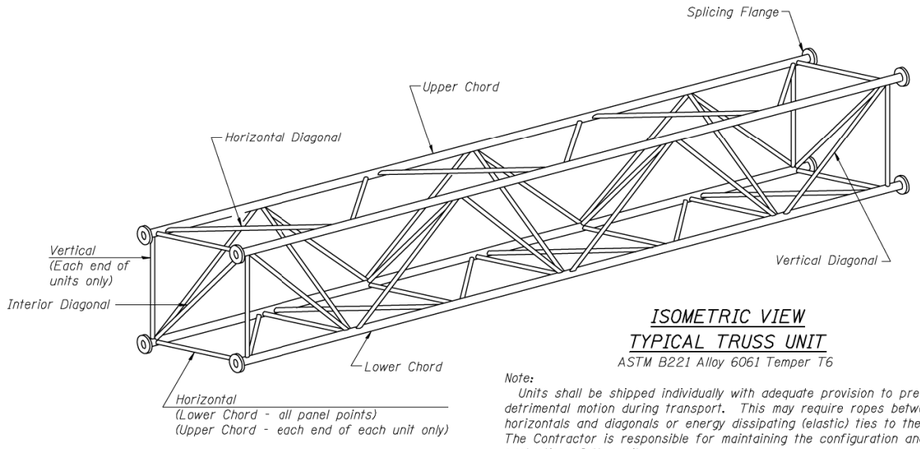
* Station for interim location shown. Sign structure to be relocated in future contract (by others).



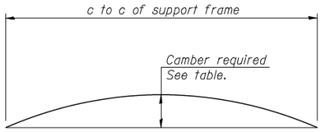
SECTION B-B

(1) Splicing Flanges shall be attached to each truss unit with the truss shop assembled to camber shown. Truss units shall be in proper alignment and flange surfaces shall be shop bolted into full contact before welding. Sufficient external welds or tacks shall be made to secure flanges until remaining welds are made after disassembly. Adjacent flanges shall be "match marked" to insure proper field assembly.



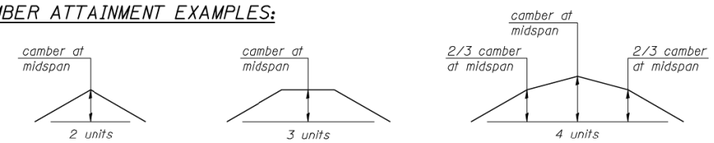
ISOMETRIC VIEW
TYPICAL TRUSS UNIT
ASTM B221 Alloy 6061 Temper T6

Note:
Units shall be shipped individually with adequate provision to prevent detrimental motion during transport. This may require ropes between horizontals and diagonals or energy dissipating (elastic) ties to the vehicle. The Contractor is responsible for maintaining the configuration and protection of the units.



CAMBER DIAGRAM
Camber curve shown is theoretical. Actual camber attained by slope changes at splices between units.

CAMBER ATTAINMENT EXAMPLES:



Cambsr shown is for fabrication only, measured with truss fully supported. (No-load condition)

FOR INFORMATION ONLY

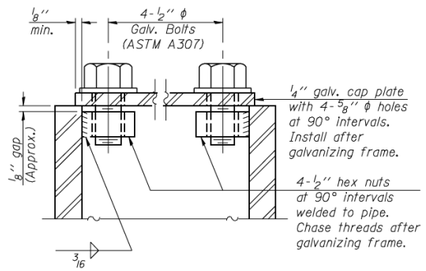
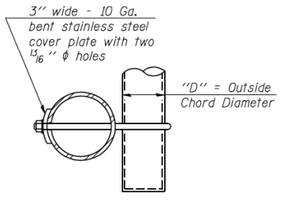
DETAIL A

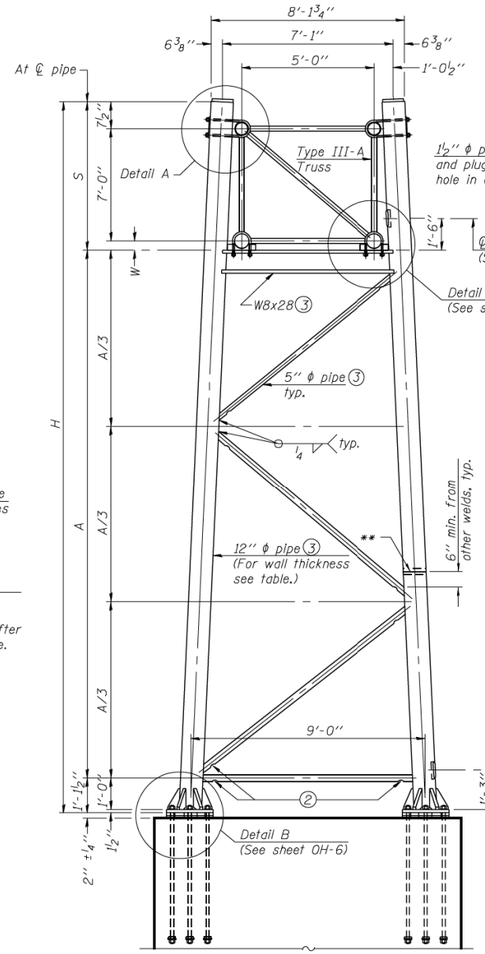


SECTION A-A

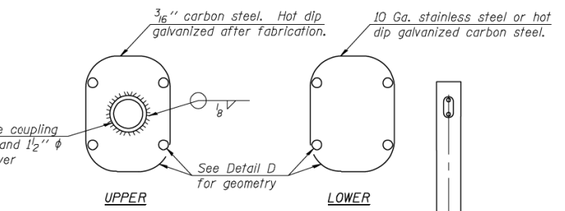
As an alternate to bolts, may use galvanized drive-fit caps installed after galvanizing frame.



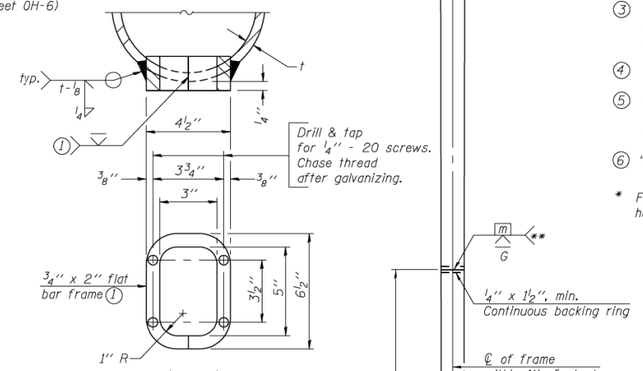
SECTION B-B



SIDE ELEVATION

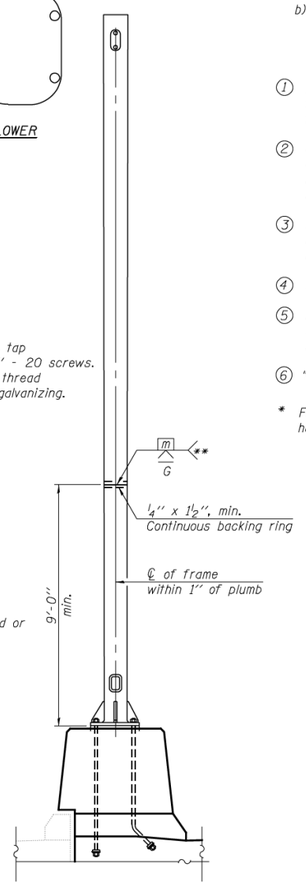


HANDHOLE COVERS



Provide 6½'' x 4½'' cover.
Provide 4-5/16'' ϕ holes in cover for ¼''-20 round head hot dip galvanized or stainless steel machine screws.
(See cover details)

DETAIL D



END ELEVATION

Support Design Loads: See sheet OH-1 for design and loading criteria.
Load combinations checked include deadload plus:
a) 100% wind normal to sign, 20% parallel to sign
b) 60% wind normal to sign, 30% parallel to sign

(1) In lieu of fabricated handhole frame as shown, may cut from 2'' plate (rolling direction vertical). All cut faces to be ground to ANSI Roughness of 500 μin or less.

(2) Galvanizing vent holes of adequate size shall be provided on underside at each end of bracing pipes. Alternately, holes may be provided in wall of pipe column. All vent holes shall be drilled and de-burred, typ.

(3) Steel pipe, plate, carbon steel handhole covers and rolled sections shall be hot dip galvanized after fabrication. Painting is not permitted. See sheet OH-1.

(4) See General Notes for fasteners.

(5) Dimensions shown are based on selection criteria in the Sign Structures Manual. Nonstandard applications must have dimensions verified or amended as appropriate.

(6) "H" based on 15'-0'' or actual sign height, whichever is greater.

* For dynamic message sign installations, provide upper and lower handholes in both legs of each support frame.

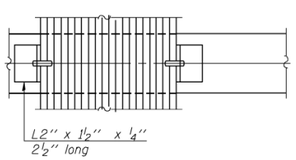
(AT WALKWAY GRATING SPLICE)



(CONTINUOUS WALKWAY GRATING)

SECTION W-W

SPECIFICATIONS FOR STANDARD ALUMINUM GRATING

Main Bearing Bars shall be 3/16" x 1 1/2" on 1 3/16" centers and conform to ASTM B221 Alloy 6061-T6.

Cross bars shall be 3/16" x 1 1/2" on 4" centers and conform to ASTM B221 Alloy 6063-T5 or 6061-T6.

OR

Aluminum Grating with modified "I" sections for main bearing bars shall meet the following requirements:

Main bars shall conform to ASTM B221 Alloy 6061-T6 and have a minimum section modulus equal to 0.0705 in.^{3} per bar, a depth of 1 1/2", spaced on 1 3/16" centers.

Cross bars shall conform to ASTM B221 Alloy 6063-T5 or T-42 and spaced on 4" centers.

Structure Number	Station	A	B
IS0161290L000.0-002	5206+12.43 (Interim*)	8"	7'-0"

* Station for interim location shown. Sign structure to be relocated in future contract (by others).

1. Drilling holes in grating may be done in shop or field, based on Contractor's preference and subject to accurate alignment.
2. Stainless steel shims shall be placed as shown in Detail T if needed to compensate for alignment variations between horizontal and diagonal pipes beyond adjustment provided by angles. Thicker shims may be used subject to shims performing properly.
3. Tube to grating gap may vary from 0 to 1/2", max. to align walkway, allow for camber, etc.

FOR INFORMATION ONLY

Bench Mark: Square cut at center of door entrance to 707 W. Harrison St; South side of Harrison St. ±90' west of west line of Des Plaines. Elevation 597.47. A + cut in the SE anchor bolt at the 11th street light N. of Roosevelt on the W. side of Halsted. Elev. = 594.06.

Existing Structure: S.N. 016-0461 was originally built in 1952 as F.A. Route Number 131. Section 062-2424.4. The existing structure consists of 16 main spans of multi-unit steel continuous multi-beam superstructures with additional entrance and exit ramp spans along Spans 12 and 13. The existing structure has an overall length of approximately 1301'-4" and an average out-to-out width of approximately 162'-0" for the main spans and 25'-0" for the ramp spans. The substructure units are founded on drilled shafts and consist of 17 multi column piers. The existing bridge is to be rehabilitated through a combination of partial removal and replacement, repairs, and partial infill of ramp spans.

Traffic Control: Two lanes of mainline traffic will be maintained utilizing stage construction. Canal Street Entrance Ramp will be closed during stage construction. Ramp traffic will be maintained utilizing stage construction.

Salvage: None

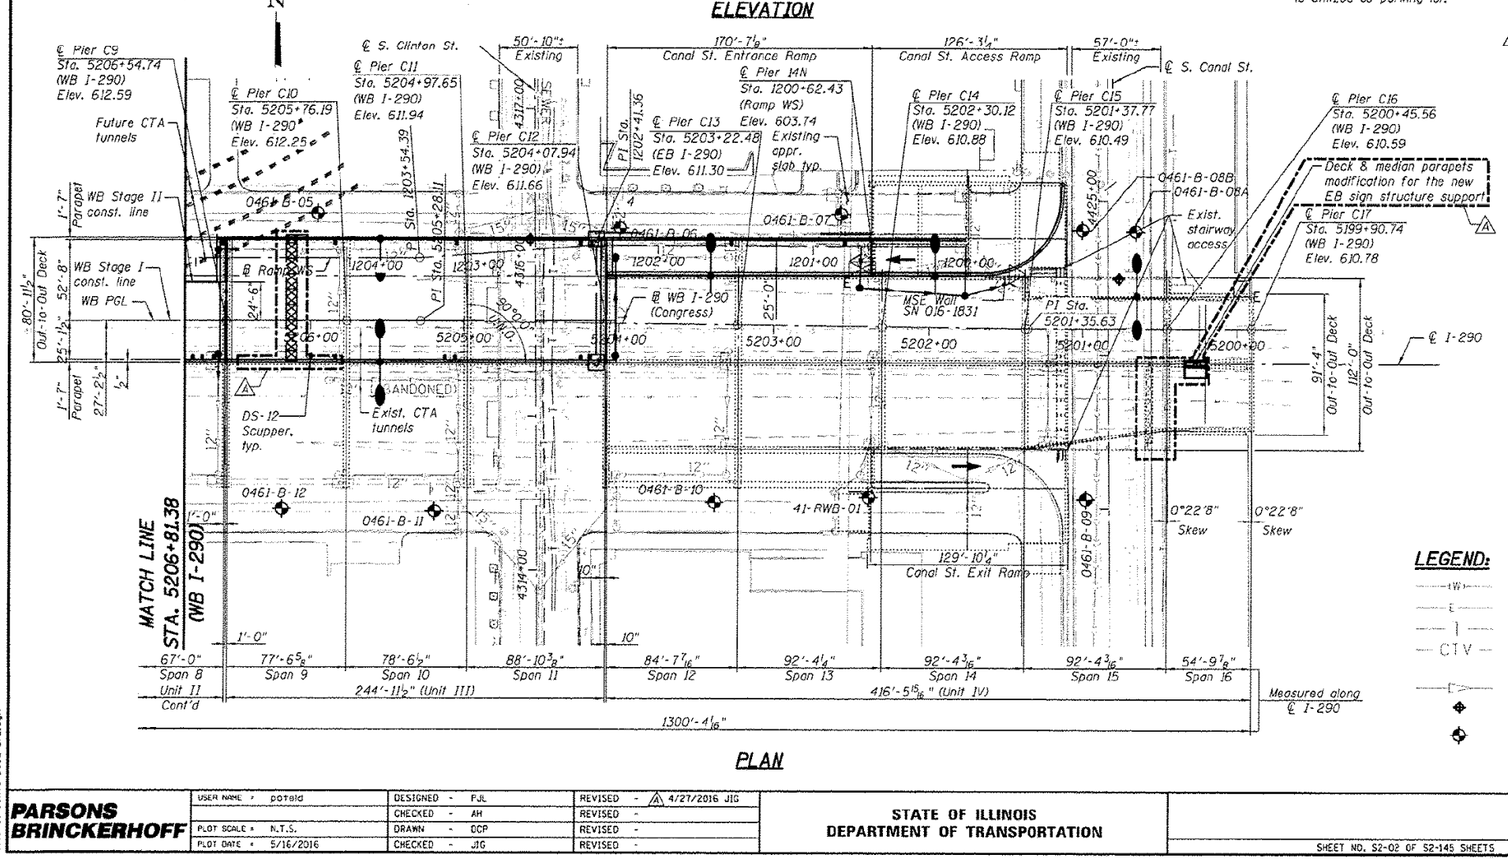
* Area below structure is utilized as parking lot.

SCOPE OF WORK

1. Replace WB deck in Spans 1 through 11 with a composite deck.
2. Repair WB deck in Spans 12 through 15.
3. Repair WB superstructure in Spans 4 through 15. (End diaphragms).
4. Remove and replace WB superstructure between Piers C1 & C4.
5. Replace WB bridge deck expansion joints with modular type at Piers C1, C9 & C12 and strip seal type at Piers C4 & 14N.
6. Replace high profile rocker bearings with elastomeric bearings at WB Piers C3, C6, C7, C8, C11, C13, C15 & C16.
7. Replace nested roller bearings with high-load multi-rotational bearings at center-column of piers C1 thru C14.
8. Repair all WB substructure units except Piers C1, C4, C9, C12 & C17.
9. Reconstruct concrete columns and caps of WB Piers C1, C4, C9 & C12 and reconfigure beam seats at Piers C1 through C4 to accommodate the proposed WB deck geometry.
10. Remove and replace existing Chain Link Fence in Spans 14 through 16 (See roadway plans).
11. Remove and replace drainage system in WB Spans 1 through 11 (See drainage plans). Clean and/or repair the existing scupper system (grates and pipes) in Spans 12 through 15.
12. Remove and replace underpass lighting over the existing roadways (See electrical plan).
13. Remove and modify median parapets & partial deck in Span 16 of Unit IV for EB sign structure support.
14. Install WB sign structure at interim location east of Pier C9 during Stage IIA Construction (see roadway plans for sign structure).
15. Remove existing WB sign structure after proposed sign structure is installed.

** Existing light poles in Unit IV to be removed and replaced and to utilize existing light support. The Contractor shall provide all precautions necessary to prevent damage to the existing light support during the removal work. If the existing light support is damaged such as the new light pole cannot be installed properly, contractor must provide detail to match existing light support to be approved by the engineer. All Cost of new light support shall be included in Concrete Superstructure. For existing light support detail, See sheet 178 of 194 of existing plans for S.N. 016-0461.



PLAN

Notes:
1. For ℄ Pier & ℄ I-290 Intersect Stationing, see sheet S2-5.
2. For Curve Data, Geometric Layout, and Highway Classification, see sheet S2-5.
3. For Profile Grades, see sheet S2-6 and S2-7.
4. For Protective Shield limits, see sheet S2-20.
5. Skew is taken from a line normal to ℄ I-290.
6. Existing utilities attached to structure will be maintained/relocated during construction.

2:07:36 PM
01604G1-60X78-S002-GPE.dgn

FOR INFORMATION ONLY

GENERAL NOTES:

1. Fasteners shall be ASTM A325 Type 1, hot dipped galvanized bolts. Bolts $^{7}/_{8}$" ϕ, holes $^{15}/_{16}$" ϕ, unless otherwise noted.

2. Calculated weight of Structural Steel = 390,250 lbs. (Gr. 50)
   = 2,690 lbs. (Gr. 36)

3. All structural steel except for steel in Temporary Support System shall be hot-dip galvanized (see special provisions).

4. The Contractor shall test the existing welds by non-desiructive methods within 2 ft. of the end of the existing cover plates for cracks after removal of the existing concrete deck. Dye penetrant (PT), magnetic particle (MT), or other approved testing method shall be performed by qualified personnel approved by the Engineer. If cracks are found, report them to the Bureau of Bridges and Structures for disposition. The cost of testing is included in Removal of Existing Concrete Deck. The cost of crack repair, if necessary, will be paid for according to Article 109.04 of the Standard Specifications.

5. No field welding is permitted except as specified in the contract documents.

6. Reinforcement bars designated (E) shall be epoxy coated.

7. Prior to pouring the new concrete deck, all heavy or loose rust, loose mill scale, and other loose or potentially detrimental foreign material shall be removed from the surfaces in contact with concrete. Tightly adhered paint may remain unless otherwise noted. Removal shall be accomplished by methods that will not damage the steel and the cost will be included in the pay item covering removal of the existing concrete.

   As directed by the Engineer, existing construction accessories welded to the top flange of beams and girders shall be removed. The weld areas shall be ground flush and inspected for cracks using magnetic particle testing (MT) or dye penetrant testing (PT) by qualified personnel approved by the Engineer. Any cracks that cannot be removed by grinding $^{1}/_{4}$ in. deep shall be identified and reported to the Bureau of Bridges and Structures for further disposition. The cost of removing welded accessories, grinding and inspecting weld areas and grinding cracks will be paid for according to Article 109.04 of the Standard Specifications.

8. If the Contractor elects to use cantilever forming brackets on the exterior beams or girders, the brackets shall be placed at the same locations as required for the hardwood blocks in Article 503.06(b) of the Standard Specifications. If additional cantilever forming brackets are required, hardwood blocking shall be wedged between the exterior and first interior beam at each of these additional bracket locations.

9. Plan dimensions and details relative to existing plans are subject to nominal construction variations. The Contractor shall field verify existing dimensions and details affecting new construction and make necessary approved adjustments prior to construction or ordering of materials. Such variations shall not be cause for additional compensation for a change in scope of the work, however, the Contractor will be paid for the quantity actually furnished at the unit price bid for the work.

10. Bearing seat surfaces shall be constructed or adjusted to the designated elevations within a tolerance of $^{1}/_{8}$" (0.01 ft.). Adjustment shall be made either by grinding the surface or by shimming the bearings.

11. Concrete Sealer shall be applied to the designated areas of the Piers C1, C4, C9 & C12.

12. The existing structural steel coating contains lead. The Contractor shall take appropriate precautions to deal with the presence of lead on this project.

13. Cleaning and field painting of structural steel shall be done under a separate painting contract, unless noted otherwise.

14. Existing structural steel shall only be cleaned and painted as required by the Special Provision "Cleaning and Painting Contact Surface Areas of Existing Steel Structures".

15. Slipforming of the parapet is not allowed.

16. Contractor shall coordinate deck construction work between Piers 10 & 11 in Unit III with MEGA Bus. The Contractor shall install deck inserts underside of the deck for the future lighting work. Deck incerts will be provided by MEGA Bus and Contractor shall ask the Engineer in advance for these incerts. This work shall not be paid separately but shall be included with Concrete Superstructure.

17. Temporary Soil Retention System shall be as per Std. Spec. Section 522.07 and as modified herein. Temporary Soil Retention System shall be installed without the use of impact-type pile drivers. The proposed equipment and procedures used for the installation of Temporary Soil Retention System shall be submitted to the Engineer for approval prior to their use. If vibratory equipment utilized, the Contractor shall also submit documentation regarding the operating noise levels and operating vibration characteristics of the equipment proposed. The approval of the equipment and procedure by the Engineer does not guarantee the performance in the field of the equipment will be acceptable. If in the judgment of the Engineer, the noise and/or vibration effects exceed those required by the local residents, then the Contractor must halt production and find a remedy suitable to the Engineer. Threshold values for vibration monitoring are included in the special provision "CONSTRUCTION VIBRATION MONITORING". The costs incurred finding suitable equipment and procedures shall be included in the cost of Temporary Soil Retention System. No additional costs shall be paid for this effort. (A)

FOR INFORMATION ONLY

STRUCTURAL ASSESSMENT OF EXISTING STRUCTURE NOTES:

1. In order to construct proposed superstructure & substructure elements, Contractor may elect to support temporary construction material and/or equipment, on the existing structures in the vicinity of the proposed structure. The Contractor shall submit Structural Assessment Report(s) for approval prior to beginning the work. See Special Provision.

2. An Existing Structure Information Package (ESIP) will be provided by the Department to the Contractor upon request.

3. The Contractor shall retain the services of an engineering firm, prequalified in the IDOT consultant selection category of Highway Bridge (Complex), for preparation of the Structural Assessment Report(s). Contractor's pre-approval shall not be applicable for this project. See Special Provision.

   Current Ratings on File for Existing Structures are as follows:

   S.N. 016-0461 (I-290 (Congress) Viaduct over Des Plaines St. to Canal St.)
   Inventory: HS 21.3
   Operating: HS 34.3
   Live Load Restrictions: None

   S.N. 016-1029 (EB I-290 over I-90/94)
   Inventory: HS 17.2
   Operating: HS 28.7
   Live Load Restrictions: None

   S.N. 016-1030 (WB I-290 over I-90/94)
   Inventory: HS 14.7
   Operating: HS 24.5
   Live Load Restrictions: None

   S.N. 016-2448 (Ramp WB I-290 to NB I-90/94 over Des Plaines Ave.)
   Inventory: HS 32.1 (HS 20+MOD)
   Operating: HS 53.5 (HS 20+MOD)
   Live Load Restrictions: None

   S.N. 016-2450 (Ramp WB I-290 to SB I-90/94 over I-90/94)
   Inventory: HS 14.2
   Operating: HS 23.6
   Live Load Restrictions: None

4. Inventory and Operating Ratings and Live Load Restrictions are provided for information only. Inventory and Operating Ratings are based on HS loading and configuration. Live Load Restrictions are based on Illinois legal loads and configurations. The Ratings and Live load Restrictions are not necessarily representative of capacities to support the Contractor's equipment.

5. The contractor is advised that the existing structures may contain members in deteriorated conditions with reduced load carrying capacities. It is the Contractor's responsibility to account for the condition of existing structures when developing construction procedures for using them to support construction loads and for the complete or partial removal or replacement of the structure.

6. The contractor shall verify that the structural demands of the applied loads due to the Contractor's means and methods will not exceed the available capacity of the structure at the time loads are applied. Most likely, the Contractor will be required to provide additional shoring under the existing bridges (or other methods of retrofitting) to support construction loads. Design, installation and subsequent removal of such shoring system will be the responsibility of the Contractor and will not be paid separately.

7. The Contractor shall use caution and not damage any component of the existing structure. Upon completion of work and prior to allowing traffic back on the existing structure the contractor must restore existing structure in its original condition.

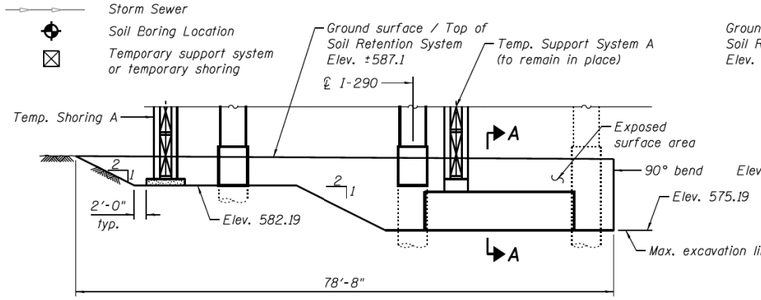
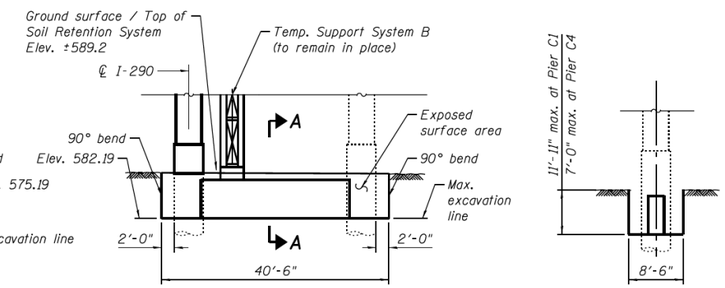
SUBSTRUCTURE LAYOUT PLAN - 1



ELEVATION - TEMPORARY SOIL RETENTION SYSTEM AT EXISTING PIER C1

(Locking East)



ELEVATION - TEMPORARY SOIL RETENTION SYSTEM AT EXISTING PIER C4

(Looking East)

SECTION A-A

Notes:

1. *Temporary Soil Retention System required for existing pier removal and Temporary Support System. See sheets S2-10 thru S2-15.*
2. *Temporary Soil Retention System to be left in place. Required for Temporary Support System. To be removed in future contract (by others).*
3. *A cantilever sheet piling design does not appear feasible and additional members or other retention systems may be necessary. The Contractor shall submit a temporary soil retention system design including plan details and calculations for review and acceptance by the Engineer.*
4. *The Contractor shall take precautions to protect existing utilities and foundations during construction of the bridge. The utilities were located based on SUE and utility supplier information available at design.*
5. *Temporary soil retention system shall avoid existing roadway drainage.*

FOR INFORMATION ONLY

STAGE I REMOVAL - UNIT I

1. Install temporary concrete barrier as shown to locate construction work area on the south side of the existing structure.
2. Install Temporary Shoring and Temporary Support System (to Remain in Place) for pier caps at Pier C1 and for existing westbound Beam No. 20. For temporary support reaction summary and details, See S2-17 for Removal Details.
3. Install Temporary Soil Retention System at Pier C1.
4. Remove existing utilities and drainage system attached to substructure.
5. Remove the existing structure as indicated.

STAGE I CONSTRUCTION - UNIT I

1. Repair existing Piers C2 and C3. Construct Piers C1 and C4.
2. Erect Beams 14 through 18.
3. Construct reinforced concrete deck.
4. Perform bridge deck grooving.
5. Apply protective coat for the bridge deck and parapet.
6. Provide a temporary drainage system. Connection of formwork to beam must be designed to withstand additional loading.

Removal of Existing Structures No. 2

BILL OF MATERIAL

Item	Unit	Quantity
Temporary Drainage System No. 2	L. Sum	1

Notes:

Horizontal dimensions are measured perpendicular to ℄ I-290.

Stage removal and stage construction lines are different for the superstructure and substructure.

Contractor shall provide Temporary Shoring for the existing pier cap and existing Beam No. 20. The Temporary Shoring shall be approved by the Engineer. Such approval will not relieve the Contractor of responsibility for the safety of the structure. See Special Provisions.

For quantity of Temporary Concrete Barrier, see roadway plans.

For Temporary Shoring and Temporary Support System (to remain in place) reactions and quantities, see sheets S2-16 and S2-17, respectively.

STAGE IIB REMOVAL - UNIT I

(Looking East, Pier C1 shown)

STAGE IIB CONSTRUCTION - UNIT I

(Looking East, Pier C1 shown)

STAGE IIA TRAFFIC - UNIT I

1. Install temporary concrete barrier on the new deck to locate IIA Traffic and construction work area on the Stage I constructed portion of the bridge.

STAGE IIB REMOVAL - UNIT I

1. Begin removal operations on Unit I upon completion of work on Unit II and III under Stage IIA traffic.
2. Remove existing utilities and drainage system attached to substructure.
3. Remove the existing structure as indicated.
4. Remove Temporary Shoring A.

STAGE IIB CONSTRUCTION - UNIT I

1. Repair and rehabilitate existing Piers C2 and C3. Construct Piers C1 and C4.
2. Erect Beams 10 through 13.
3. Construct reinforced concrete deck.
4. Perform bridge deck grooving.
5. Apply protective coat for the bridge deck and parapet.
6. Place temporary pavement markings on the top of deck for staged traffic.

STAGE I CONSTRUCTION - UNIT II

(Looking East, Pier C4 shown)

STAGE I REMOVAL - UNIT II

1. Install temporary concrete barrier as shown to locate construction work area on the south side of the existing structure.
2. Install Temporary Support System B and C (to Remain in Place). Install temporary shoring and cribbing for existing westbound Beams 8 thru 14.
3. Remove existing utilities and drainage system attached to substructure.
4. Remove the existing structure as indicated.

STAGE I CONSTRUCTION - UNIT II

1. Repair existing cap, columns and reconstruct beam seats at Piers C5 thru C8. Construct Piers C4 and C9.
2. Remove and Replace existing bearings.
3. Install Shear Stud Connectors to existing beams and set in new bearings.
4. Construct reinforced concrete deck.
5. Perform bridge deck grooving.
6. Apply protective coat for the bridge deck and parapet.

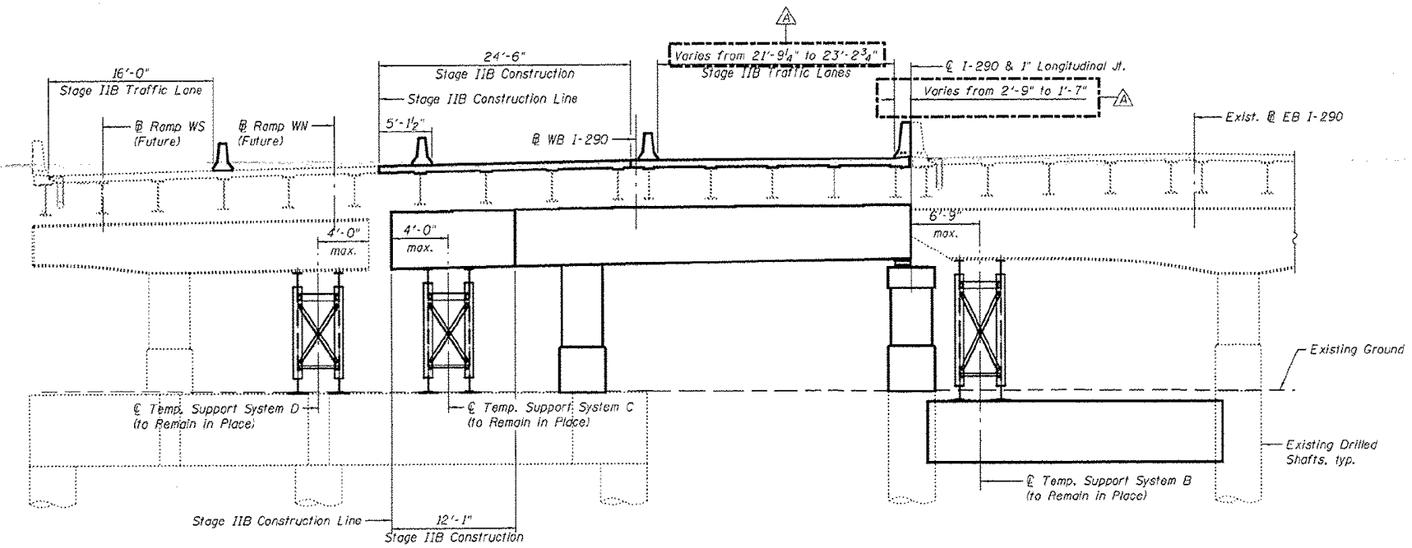
(Looking East, Pier C4 shown)



STAGE IIB CONSTRUCTION - UNIT II

(Looking East, Pier C4 shown)

STAGE IIA TRAFFIC - UNIT II

1. Install temporary concrete barrier on the new and existing deck to locate Stage IIA Traffic and construction work area on the Stage I constructed portion of the bridge. Refer to Roadway Plans for additional details on Stage IIA Traffic.
2. Construction work to be completed during Stage IIA Traffic includes the reconstruction of Pier C9, bearing replacement, deck expansion joint and installation of shear studs within limits of deck expansion joint.

STAGE IIB REMOVAL - UNIT II

1. Relocate temporary concrete barrier on the new and existing deck to locate Stage IIB Traffic and construction work area on the Stage I constructed portion of the bridge.
2. Install Temporary Support System D (to Remain in Place) under existing pier cap. Install temporary shoring and cribbing for existing westbound Beams 6 and 7.
3. Remove existing utilities and drainage system attached to substructure.
4. Remove the existing structure as indicated.

STAGE IIB CONSTRUCTION - UNIT II

1. Repair existing cap, columns and reconstruct beam seats at Piers C5 thru C8. Construct Piers C4 and C9.
2. Remove and Replace existing bearings.
3. Install Shear Stud Connectors to existing beams and set in new bearings.
4. Construct reinforced concrete deck.

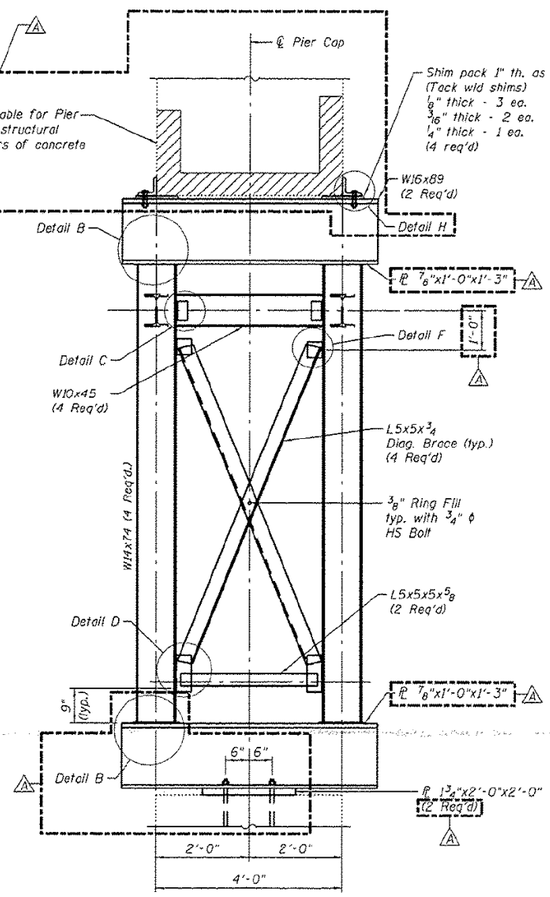
TEMPORARY SUPPORT ELEVATION

(Looking East)
(Temp. Support A, B, E & F shown, Temp. Support C & D similar)



SECTION A-A

* PIER CAPS STRUCTURAL REPAIR OF CONCRETE AREA (See Note 7)		
Location	WB (Sq. Ft.)	EB (Sq. Ft.)
Pier C1	±8	±89
** Pier C4	±37	±382
Pier C9	±20	±150
Pier C12	±12	±225
Total	±77	±846

* Pier cap repairs to be completed prior to placement of the temporary support system to remain in place.

** Portion of EB Pier C4 cap repair area includes repairs for adjacent contract 62876. Coordinate work with adjacent contract (62876) for location of temporary support system to remain in place.

HEIGHTS - TEMPORARY SUPPORT (TO REMAIN IN PLACE)		
Location	H	H1
Temp. Support A	±16'-2 1/4"	±11'-1 1/4"
Temp. Support B	±12'-9 7/8"	±7'-8 7/8"
Temp. Support C	±11'-11 3/4"	±6'-10 3/4"
Temp. Support D	±12'-0 3/4"	±6'-11 3/4"
Temp. Support E	±13'-0 1/2"	±7'-11 1/2"
Temp. Support F	±11'-10 3/8"	±6'-9 3/8"

Notes:

1. See sheet S2-8 thru S2-15, for locations of temporary supports.
2. See sheet S2-18, for Detail A thru Detail H.
3. All structural steel for temporary supports shall be AASHTO M270 Grade 50. Cost of structural steel included with Temporary Support System (to Remain in Place).
4. Anchor bolts shall be ASTM F1554 all-thread (or an Engineer-approved alternate material) of the grade and diameter specified. The corresponding specified grade of AASHTO M314 anchor bolts may be used in lieu of ASTM F1554.
5. Drilled and set anchor bolts shall be installed according to Article 521.06 of the Standard Specifications.
6. The Contractor may elect to use bolted connections with oversized holes in lieu of shop welding. Prior to ordering of materials any changes to the temporary support system shall be submitted for approval of the Engineer. Details and calculations of such changes shall be prepared and sealed by an Illinois Licensed Structural Engineer.
7. Area of pier repairs shown are estimated based on inspections performed in July 2012. The Engineer shall record the actual pier repair areas in the "As Built" plans. Changes in repair areas shall not be cause for additional compensation for a change in scope of the work, however, the Contractor will be paid for the quantity furnished at the unit bid price for the work.

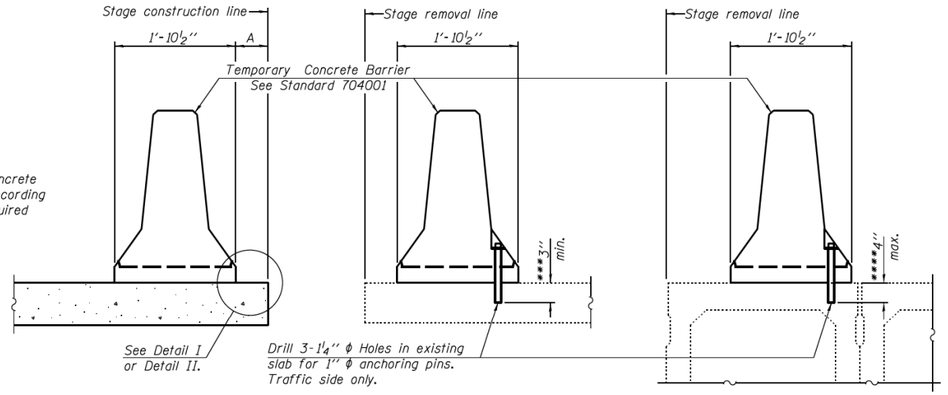
2:10:30 PM

FOR INFORMATION ONLY

When "A" is 3'-1" or less, the temporary concrete barrier shall be anchored to the new slab according to Detail I or Detail II. No anchorage is required when "A" is greater than 3'-1".



NEW SLAB | **EXISTING SLAB** | **EXISTING DECK BEAM**

NOTES

Detail I - With Bar Splicer or Couplers:
Connect one (1) 1" x 7" x "W" steel ℙ to the top layer of couplers with 2-⅝" ϕ bolts screwed to coupler at approximate ℄ of each barrier panel.

Detail II - With Extended Reinforcement Bars:
Connect one (1) 1" x 7" x "W" steel ℙ to the concrete slab or concrete wearing surface with 2-⅝" ϕ Expansion Anchors or cast in place inserts spaced between the top layer of reinforcement at approximate ℄ of each barrier panel.

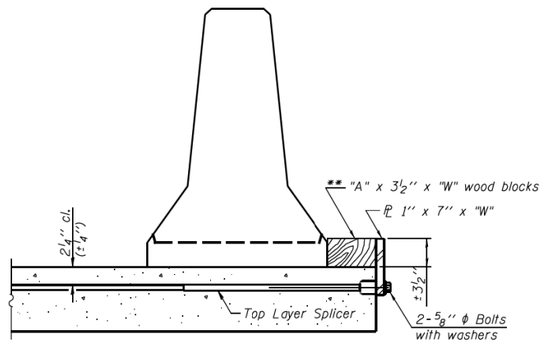
Cost of retainer assembly is included with Temporary Concrete Barrier.

The 1" x 7" x "W" plate shall not be removed until stage II construction forms and all reinforcement bars are in place and the concrete is ready to be placed.

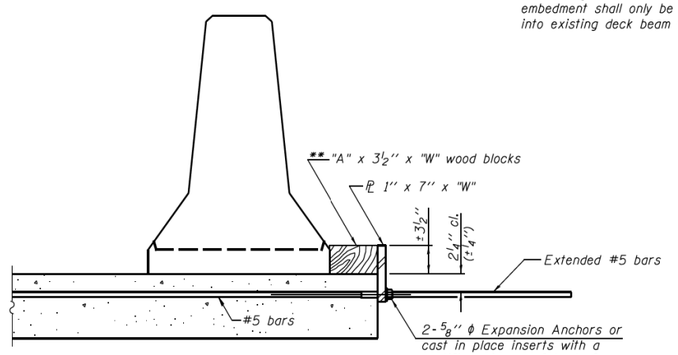
SECTIONS THRU SLAB OR DECK BEAM

*** Dimension shown is minimum required embedment into concrete. If hot-mix asphalt wearing surface is present, minimum embedment shall be in addition to wearing surface depth.

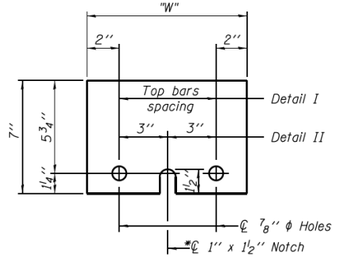
**** If existing deck beam is to remain in place after stage construction, embedment shall only be into wearing surface and not into existing deck beam concrete.



DETAIL I



DETAIL II



STEEL RETAINER ℙ 1" x 7" x "W"

* Required only with Detail II

RETAINER ASSEMBLY

** Wood blocks may be omitted when required to provide minimum stage traffic lane width. When the wood blocks are omitted, the concrete barrier shall be in direct contact with the steel retainer plate.

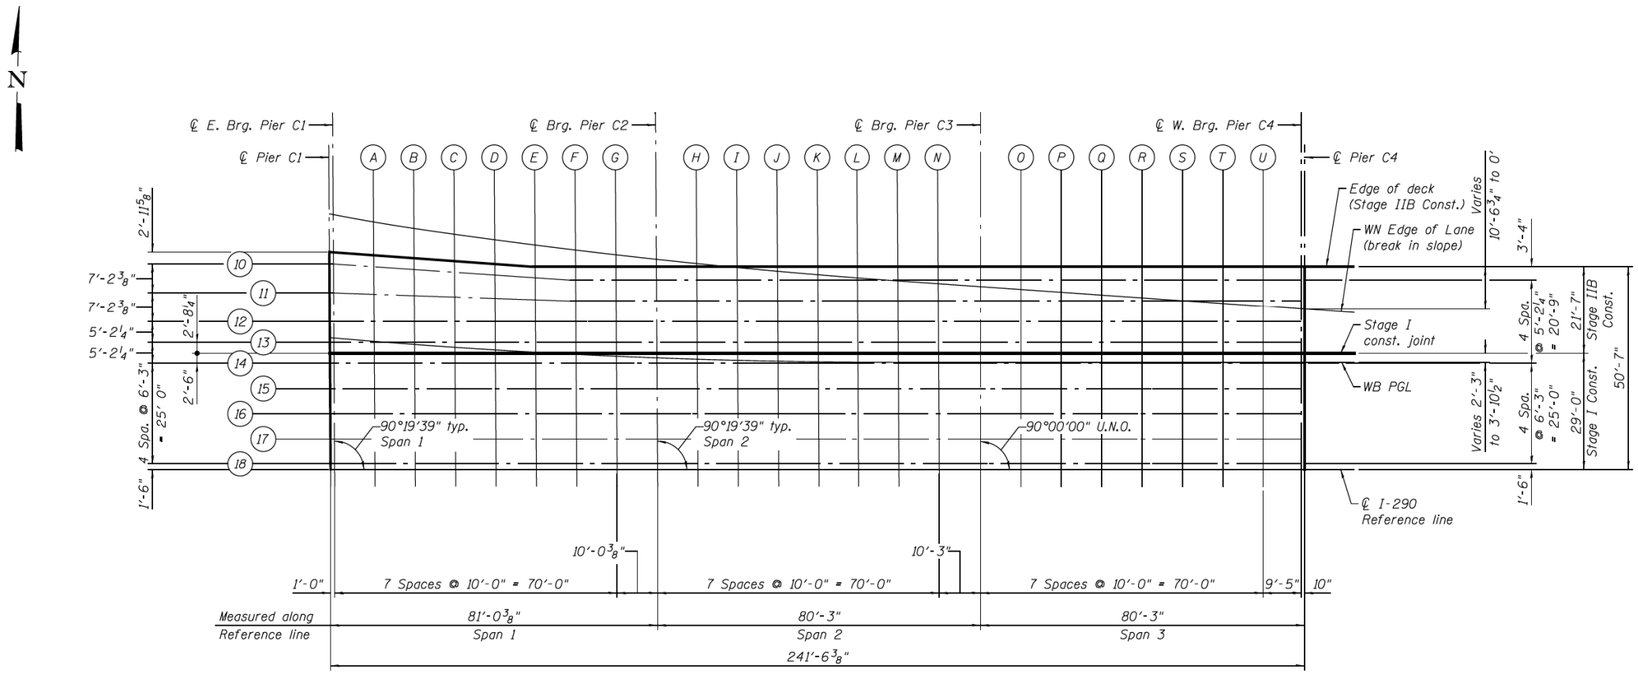
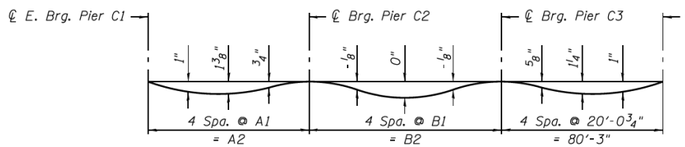
FOR INFORMATION ONLY



PLAN - UNIT I

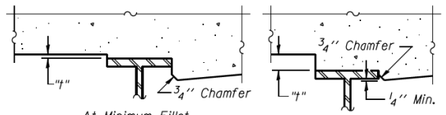


DEAD LOAD DEFLECTION DIAGRAM

(Includes weight of concrete only.)

Note:
The above deflections are not to be used in the field if the engineer is working from the grade elevations adjusted for dead load deflections as shown in tables, see sheets S2-26 thru S2-29.

Beam No.	Span 1		Span 2	
	A1	A2	B1	B2
10	±20'-0 1/2"	80'-2 1/8"	±20'-1 5/8"	80'-6 1/4"
11	±20'-0 1/4"	80'-0 7/8"	±20'-1 1/2"	80'-5 7/8"
12	±20'-0 1/8"	80'-0 3/8"	20'-1 3/8"	80'-5 1/2"
13	±20'-0 1/8"	80'-0 3/8"	±20'-1 1/4"	80'-5 1/8"
14	±20'-0 1/8"	80'-0 3/8"	±20'-1 1/4"	80'-4 3/4"
15	±20'-0 1/8"	80'-0 3/8"	±20'-1 1/8"	80'-4 3/8"
16	±20'-0 1/8"	80'-0 3/8"	±20'-1"	80'-3 7/8"
17	±20'-0 1/8"	80'-0 3/8"	20'-0 7/8"	80'-3 1/2"
18	±20'-0 1/8"	80'-0 3/8"	±20'-0 3/4"	80'-3 1/8"



To determine "t": After all structural steel has been erected, elevations of the top flanges of the beams shall be taken at intervals in tables, see sheets S2-26 thru S2-29. These elevations subtracted from the "Theoretical Grade Elevations Adjusted for Dead Load Deflection" shown on sheets S2-26 thru S2-29, minus slab thickness, equals the fillet heights "t" above top flange of beams.

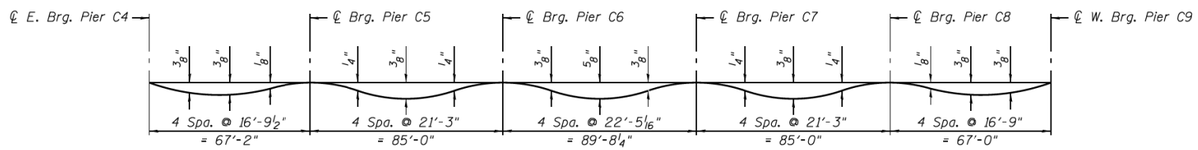
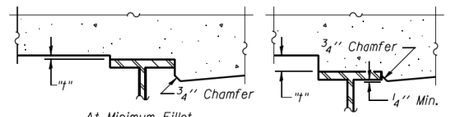
PLAN - UNIT II



DEAD LOAD DEFLECTION DIAGRAM

(Includes weight of concrete only.)

Note:
The above deflections are not to be used in the field if the engineer is working from the grade elevations adjusted for dead load deflections as shown in tables, see sheets S2-31 thru S2-35.



To determine "t": After all structural steel has been erected, elevations of the top flanges of the beams shall be taken at intervals in tables, see sheets S2-31 thru S2-35. These elevations subtracted from the "Theoretical Grade Elevations Adjusted for Dead Load Deflection" shown on sheets S2-31 thru S2-35, minus slab thickness, equals the fillet heights "t" above top flange of beams.

FOR INFORMATION ONLY

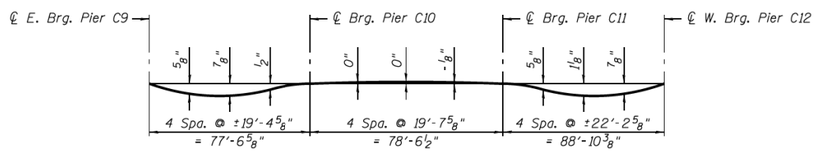
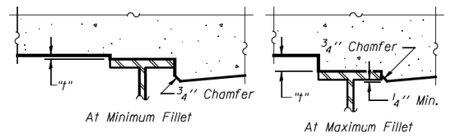
PLAN - UNIT III



DEAD LOAD DEFLECTION DIAGRAM

(Includes weight of concrete only.)

Note:
The above deflections are not to be used in the field if the engineer is working from the grade elevations adjusted for dead load deflections as shown in tables, see sheets S2-36 thru S2-43.



To determine "t": After all structural steel has been erected, elevations of the top flanges of the beams shall be taken at intervals in tables, see sheets S2-36 thru S2-43. These elevations subtracted from the "Theoretical Grade Elevations Adjusted for Dead Load Deflection" shown on sheets S2-36 thru S2-43, minus slab thickness, equals the fillet heights "t" above top flange of beams.

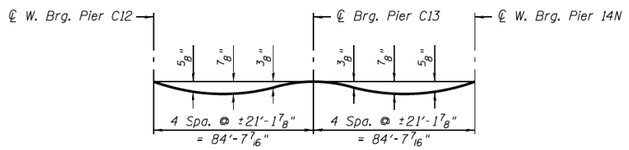
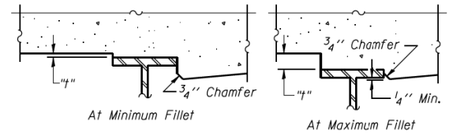
PLAN - ENTRANCE RAMP



DEAD LOAD DEFLECTION DIAGRAM

(Includes weight of concrete only.)

Note:
The above deflections are not to be used in the field if the engineer is working from the grade elevations adjusted for dead load deflections as shown in tables, see sheet S2-45.



To determine "t": After all structural steel has been erected, elevations of the top flanges of the beams shall be taken at intervals in tables, see sheet S2-45. These elevations subtracted from the "Theoretical Grade Elevations Adjusted for Dead Load Deflection" shown on sheet S2-45, minus slab thickness, equals the fillet heights "t" above top flange of beams.

FOR INFORMATION ONLY

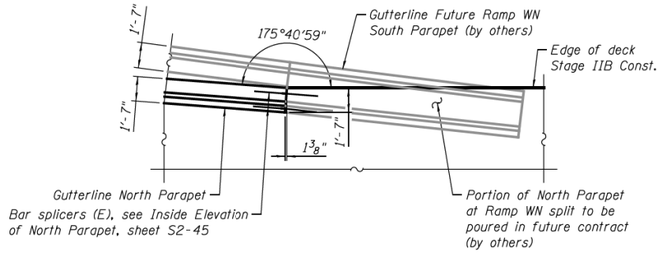
DECK PLAN - UNIT I

* Order a102(E) bars full length. Cut to fit skew.

** Alternate location of lap.



PLAN
NORTH PARAPET AT RAMP WN SPLIT (FUTURE)

(Reinforcement not shown for clarity)

MINIMUM BAR LAP

#5 bar = 2'-7"
#6 bar = 3'-1"

Notes:

1. See sheet S2-47, for cross sections.
2. See sheet S2-48, for parapet reinforcement.
3. See sheet S2-49 thru S2-51, for superstructure details, Partial Plan at Pier C1, and Bill of Material.
4. See sheet S2-57, for Section A-A.
6. Bars indicated thus 20 x 3-#5 etc. indicates 20 lines of bars with 3 lengths per line.
7. Reinforcement bars shall not pass thru aluminum sheets and cork joint filler.
8. Dimensions are based on a Rolled Rail Strip Seal Joint. If the Contractor elects to use the Welded Rail strip seal joint, deck dimensions may require adjustments to satisfy the details on sheet S2-70.

PARTIAL DECK PLAN - UNIT II

NEAR MIDSPAN NEAR PIER

CROSS SECTION - UNIT II

(Looking East)

A See sheet S2-57A, for barrier modification and OH Sign Structure Pedestal details.

MINIMUM BAR LAP

#5 bar = 2'-7"
#6 bar = 3'-1"

Notes:

1. See sheet S2-54, for parapet reinforcement.
2. See sheet S2-55 thru S52-54, for superstructure details, Section A-A, and Bill of Material.
3. Bars indicated thus 20 x 3-#5 etc. indicates 20 lines of bars with 3 lengths per line.
4. Reinforcement bars shall not pass thru aluminum sheets and cork joint filler.
5. Dimensions are based on a Rolled Rail Strip Seal Joint. If the Contractor elects to use the Welded Rail strip seal joint, deck dimensions may require adjustments to satisfy the details on sheet S2-70.
