LOCATION MAP

GENERAL NOTES:

All reinforcement bars shall be lapped 24 diameters unless otherwise shown.

Field connections shall be bolted using high strength bolts. Bolts 7/8"ø, open holes 15/16" ø, unless otherwise noted.

The basic lead silico chromate paint system shall be used for shop & field painting of Structural Steel.

Field welding of construction accessories will not be permitted to the bottom flange of girders nor to the top flange for a distance equal to one-fourth the span length each way from the pier support. Field welding in other areas will be permitted only when approved by the Engineer.

Ancho. . .its shall be set before bolting diaphragms over supports.

Slope Wall shall be reinforced with welded wire fabric 6"x6" mesh, weighing 58# per 100 sq. ft.

The embankment configuration shown shall be the minimum embankment that must be constructed prior to construction of the abutments.

The Contractor shall drive two concrete test piles at each abutment, and one timber test pile at pier No. 2 in permanent locations as directed by the Engineer before ordering the remainder of the piles.

The concrete rail section above the mandatory construction joint at the top of the slab shall be constructed of Class X Concrete, except the aggregates shall conform to the requirements of Handrail Concrete.

Protective Coat shall not be applied to surfaces to which Water Proofing Membrane System is applied.

Bearing seat surfaces shall be constructed or adjusted to the designated elevations within a tolerance of ± 1/8 inch. Adjustment shall be made either by grinding the surface or by shimming the bearing. Two 6" adjusted shims, of the dimensions of the bottom bearing plate, shall be provided for each bearing in additional to all other plates of shims.

The main load carrying member components subject to the Supplemental Requirements for Notch Toughness are the flanges, webs, and splice plates of the steel girders.

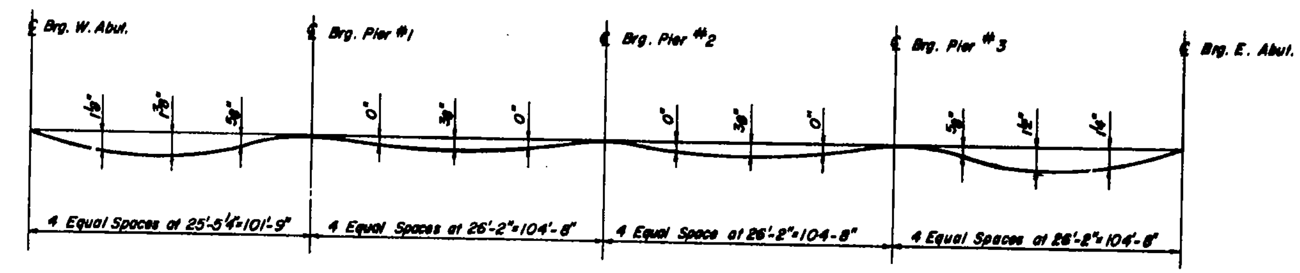
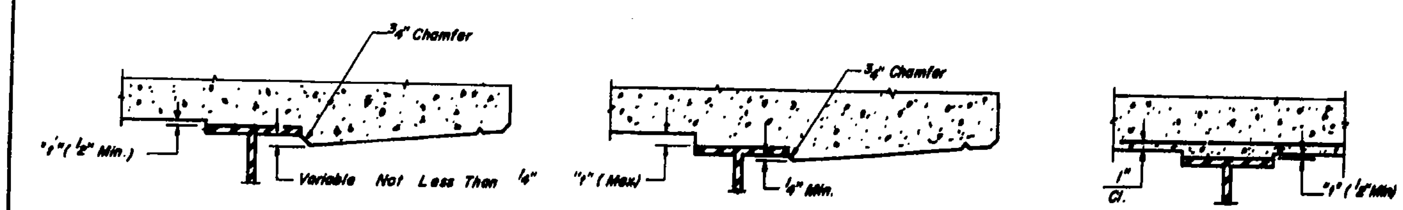
WORK THIS SHEET WITH SHEETS Nº 3 & 4



DEAD LOAD DEFLECTION DIAGRAM

(Includes Weight of Concrete Slab & Initial Deck Surfacing)

NOTE: The above deflections are not to be used in the field if the engineer is working from the grade elevations adjusted for dead load deflections as shown below.



AT MINIMUM FILLET

AT MAXIMUM FILLET

INTERIOR BEAM

EXTERIOR BEAM

FILLET HEIGHTS

NOTES:

To determine "t" after all Structural Steel has been erected, elevations of the top flanges of the girders shall be taken at the intervals shown above. These elevations subtracted from the "Theoretical grade elevations adjusted for dead load deflection" above minus 7½" inches equals the fillet heights "t" above top flange of girder.

Elevations are given at top of concrete slab.

Offsets are from profile grade line. Negative values to the right and Positive values to the left.

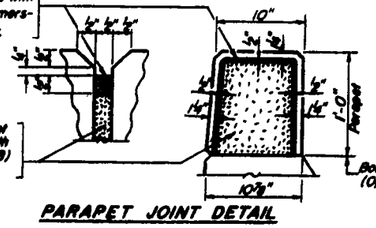
Two component non-staining gray sealing compound with polysulfide liquid polymers-gun grade with primer.



½" Preformed Cork Joint Filler (In accordance with Articles 715.07 or 715.08) Cost incidental.

PARAPET JOINT DETAIL

CLAMP BAR

NOTES:

All Aluminum Alloy Extruded Rail shall be supplied in modular lengths of 30 feet, except at the end of bridge or over open joints in bridge deck where the rail shall be attached to a minimum of 2 posts. If the rail is on a horizontal curve of 2300 feet radius or less, the modular lengths may be reduced but shall be attached to a minimum of 2 posts.

All joints in rail shall be spliced per detail.

Provide 1 - ⅜" and 2 - ⅛" Aluminum Shims for 25% of the Posts. Rail element shall be parallel to Grade - high spots shall be ground and low spots shimmed.

Seal perimeter of base of post to parapet with two component non-staining gray sealing compound with polysulfide liquid polymers, gun grade with primer. Fabric Bearing Pad shall have same dimensions as base of post.

Aluminum alloy rail shall conform to ASTM B221 alloy 6061-T6 or 6351-T5 with min. yield 35 ksi, min. tensile 38 ksi and

Whiteside
SECTION A-A FOR PILES UNDER 45' LONG
SECTION A-A FOR PILES 45' OR MORE
TIP
Note: For 14" Piles 45' long or more use 8-#8 bars 4 for the full length and 4 to the point of bevel. For 14" Piles under 45' long use 4-#9 bars full length.
Handling: For Pile lengths up to 45', use two slings placed at a distance of 0.21 L from each end. For Piles longer than 45', use three slings placed at a distance of 0.12 L from each end and at mid point of pile.
DETAIL OF PRECAST CONCRETE PILES

ALLOWABLE TAPER SECTIONS
10' Length - Taper 1" in 2'-6"
17' Length - Taper 1" in 4'-0"
25' Length - Taper 1" in 7'-0"
30' Length - Taper 1" in 7'-0"
NOTE: The thickness of the shell shall be 0.1793 inches with a tolerance of 5%.
PILE BUILD UP
Cast in Place Concrete Build Up
PILE PLAN
SECTION A-A
ELEVATION (End Reinforcement)
PLAN (End Reinforcement)
SECTION THRU PILE
8 - 7/16" Prestressing Strands
DESIGN STRESSES
f'c = 5,000 psi.
f'ci = 4,000 psi.
f's = 248,000 psi. (31,000 lbs.)
f'si = 188,000 psi. (21,700 lbs.)
NOTES
Prestressing steel shall be non-galvanized extra high strength stress-relieved 7-wire strand. The nominal diameter shall be 7/16" and the minimum nominal cross-sectional area shall be 0.1155 square inch.
For Pile lengths up to 65', use two slings placed at a distance of 0.21 L * from each end. For Piles longer than 65', use three slings placed at a distance of 0.12 L * from each end and at mid-point of pile. * L = Over all length of pile to be handled.
PRECAST PRESTRESSED CONCRETE PILE
Steel Pipe
NOTE: Driving and bearing ends of pipe shall be cut square.
The thickness of the shell shall be 0.1793 inches with a tolerance of 5%.
For field splice bevel edge and butt weld.
Cont. weld
3/4" Plate
OPTIONAL FLAT END
For Estimated Length see Sheet No.
DETAIL OF CYLINDRICAL STEEL SHELL FOR CAST IN PLACE CONCRETE PILES
The cost of Reinforcement is incidental to the cost of furnishing piles.
6" Horizontal band (Typ.)
6-#5 bars 6'-6" long
#4 bar Spiral
Metal Shell
SECTION B-B
Reinforcement in top of pile shall be omitted under pier footings when placed in natural ground.
DETAIL OF REINFORCEMENT FOR METAL SHELLS
6-#6 bars (For Details, See below)
Metal Shell
1" Min. - 2" Max
1/4" Spiral Hooping at 6" spacing or #4 Ties at 12" cts.
Reinforcement is incidental to the cost of furnishing piles.
SECTION A-A
PILE REINFORCEMENT
(Straight or increases 1" per step from pile point to Butt) For Estimated Length - See Sheet No.
Steel Plate welded to Bottom
At least 10% of the length of pile shall have a Butt diameter equal to or greater than 12". Gauges are furnished to suit soil conditions (16 Gauge avg. min.)
BUTT
POINT (Applies only to Step Taper type pile)
