

3. Construction Activities Sequencing
4. Emergency Access Routes

To mitigate impacts, an Emergency Response Plan would be developed by the Illinois Tollway and emergency providers; coordination would be undertaken with emergency providers to develop acceptable response times and routes. The plan would involve organizing Mutual Aid Agreements between all emergency responders in the project area. It would identify which resources are available and would have contingency plans in place to make up for any deficiencies. Whatever the situation, people, equipment, facilities, and materials needed for emergency response would be identified, and where they would come from must be determined in advance. Moreover, the people supplying these resources must be made aware of their role in the plan, a key to effective emergency response being a communications system that can relay accurate information quickly. As a result, reliable communication equipment must be used, procedures developed, personnel trained, and a backup system in place. Accordingly, the Emergency Response Plan would identify a list of site personnel with cellular phones, email addresses, and/or two-way radios.

Another means to mitigate impacts is to sequence construction activities such as road or ramp closures, so that local access is maintained at all times. However, in areas where sequencing of work cannot be instituted, temporary access routes for emergency routing during construction activities may be required. These locations would be identified with input from emergency responders in the area.

### 3.6 Agriculture

The project corridor does not have any property with agricultural use. Further, the project corridor is located within the Chicago, Illinois-Indiana urbanized area, as defined by the U.S. Bureau of the Census (U.S. Bureau of the Census, 2000<sup>6</sup>). Per the cooperative agreements between IDOT and the Illinois Department of Agriculture (IDOA), coordination with IDOA and the Natural Resource Conservation Service (NRCS) is not required.

### 3.7 Cultural Resources

Cultural resources include archaeological sites and standing structures with architectural integrity that adequately represent American history and culture. The National Historic Preservation Act and its implementing regulations require that federal agencies consider the impact that their actions have on such resources and allow the Advisory Council on Historic Preservation an opportunity to comment on such undertakings. Section 4(f) of the Department of Transportation Act of 1966 also protects historic properties.

No cultural resources subject to the provisions of Section 106 of the National Historic Preservation Act of 1966, as amended, or of Section 4(f) of the Department of Transportation Act of 1966 were found in the project corridor. Where field surveys were conducted, the Illinois State Historic Preservation Officer (SHPO) has concurred in this finding (see Appendix B). Elsewhere, the professional IDOT cultural resources staff, under the
